WORLDBEAT - NEW ZEALAND: IARU REGION 3 TURNS 40

Region 3 of the International Amateur Radio Union is turning 40. The New Zealand Amateur Radio Transmitters bulletin says that this month marks the 40th anniversary of the formation of Region 3 which was formed in 1968 at its Inaugural meeting, held in conjunction with the 1968 Federal Convention of the Wireless Institute of Australia. In the city of Sidney

From outside Australia those present at this meeting included Harry Burton, ZL2APC, and Tom Clarkson, ZL2AZ, from New Zealand. Also present were Emilio Asisitores, DU1EA, of the Philippines, along with Kan Mizoguchi, JA1BK, and Kenichi Kajii, JA1FG, from Japan.

Attending representing the IARU world body was its then President Bob Denniston, W0DX. National societies represented at the inaugural congress were the JARL, NZART, PARS and the WIA. (NZART)

**

ON THE AIR: INTERNATIONAL MUSEUMS WEEKENDS FROM GREECE

Greece will be on the air for a pair of upcoming ham radio operating events. SV2CWV, SV2HRV, SV2KBB and SV2LBB will be active using the special callsign SX2MT during the 2008 International Museums Weekends from the Museum of Vergina in Hella, Greece.

The International Museums Weekend takes place on the weekends of June 14th and 15th and 21st to the 22nd. Activity by the Greek stations will be on all bands and using all modes. QSL via SV2KBB, direct only or electronically using eQsl (opdx)

**

DX

In D-X, word that members of the Ukrainian National Team will be active as

EM5HQ during the 2008 IARU HF Contest on July 12th and 13th. The QSL manager for this year event is UR5EAW. All QSLs will be sent via the QSL Bureau. Stations making 4 QSOs with the station EM5HQ will be sent a special certificate.

M0OXO and M0NJW will be active as MJ0X from Les Minquiers Islands during the R-S-G-B Islands On The Air Contest on July 26th and 27th. Outside of the contest, look for Charles to sign GB8LMI between July 23rd and the 29th. QSL via M3ZYZ.

JL3RDC will be active as NH0DX from the Marians Islands during the

CQ World Wide DX SSB Contest from October 25th to the 26th. This, as a Single-Operator, All-Band High-Band entry. QSL via JL3RDC direct only. No cards will be accepted via the bureau.

PA0IJM, will be active as SI9AM from the King Chulalongkorn Memorial Amateur Radio Societyin Sweden from late evening through May 15th. QSL via SM3CVM, by the bureau or direct to his Callbook address.

A7HMZ will make his usual regular May trip to Pohnpei and will once again be active as V63DX between May 19th and the 24th. He will operate on all band and modes including 6 meters. QSL via JA7HMZ.

Lastly, Ted Melinosky, K1BV, says that he has assumed QSL Manager duties for 4L8A. Ted is also the QSL Manager for D4B, D44TT and EY8MM. His address is 12 Wells Woods Road, Columbia, CT. 06237.

(Above from various DX news sources)

THAT FINAL ITEM: SCOUTS AT HAMVENTION 2008

And finally this week, if you see a lot of scouts in the halls And flea market of the 2008 Dayton Hamvention, it wont be an illusion. Thats because Scout Leaders will be reaching out to ham radio operators at Hamvention to encourage them to provide more amateur radio opportunities to scouts back in their home towns. Amateur Radio Newsline's own scout leader, Mark Abramovich, NT3V, is here with the details:

--

Bill Ragsdale, K6KN, is a district chairman for Yolo, in the Golden Empire Council in Woodland, California, just outside of Sacramento.

A ham since 1954, Bill came up with the idea of combining his two hobbies - Scouting and amateur radio into a presentation he'll give on Saturday, May 17 at 9 a.m. in Room 2 at Hamvention

"I put together a 45-minute program on the interaction between Scouting and ham radio," explains Ragsdale. "It's called 'Adventures with Elmer Baden Powell. It's a play on the concept of Elmer as a mentor and Baden Powell as the founder of the Scout movement."

Ragsdale, active on Scouting internet chat sites, has assembled a small staff of volunteers to help deliver a program that will offer lots of good ideas for hams willing to hook up with Scouts.

"We cover how to get involved with the Jamboree on the Air, how to use IRLP and Echo Link to establish worldwide communications and how to put on local events at that time period," Ragsdale says.

The bottom line, Ragsdale says, is it's easy to get involved.

"Scouts have events such as camporees, jamborees, jamborama that are outdoor events and we find that amateur radio is a natural fit for that," he says.

Ragsdale says he's also setting up a booth in one of the exhibit halls to encourage some networking between Scouts and hams.

"We anticipate we'll have 500 or 600 people come by the booth and our idea is to educate them and provide resources for them that they can take away with them," Ragsdale says.

And, there's one more thing the group will do.

Matt Murphy, KC8BEW, of the Muskingham Valley Council in Zanesville, Ohio, is behind an effort to get Boy Scout camps which have ham radio operating for the summer to register with a database he's calling SCOTA for Scout Camps on the Air.

"We'll kind of pattern it like some of the others, lighthouses for one, IOTA, something like that," Murphy says. "And, what we'll do is come up with a numbering system which, incidentally, has been provided to us by the Boy Scouts of America because every council has an assigned number."

Murphy says the idea has been gelling for less than a year. He says he's looking first to gather the data and then set up a general area on the web where it can be accessed.

"It started out about six, eight-months-ago," Murphy says. "Started coming up with the idea and started taking it from there. And, I'm hoping to get some contact with Boy Scouts at the national headquarters.

"My council, local council is helping out a little bit and kind of get the word out to begin that way."

You can learn more about this program by going to our website, A-R Newsline-dot-O-R-G, click on the script for this

week's show and scroll down to That Final Item where you'll find a website anchored by W6BSA and Ragsdale.

Visit http://YoloBSA.editme.com/Dayton for further information.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

The 2008 Dayton Hamvention takes place May 16th, 17th and 18th at the Hara Arena. To name manufacturers will be there, The ARRL will have its expo there. Newsline will be hosting the Ham Radio Town Meeting on Saturday the 17th and we hope to see many of you there as well. (ARNewsline")

>73 de Jim, N2EY

The narrative does seem to fall flat when a so-called "compliant and
obsequious lapdog" sues its master in Federal Court and scores at least
a partial win.

Furthermore, there's other significant differences between the ARRL and
the NRA that need to be considered when making suggestions about how to
increase the League's effectiveness.

For one, the NRA is a 501(c)4 organization, whereas the ARRL is
501(c)3. Both are not-for-profit and exempt from federal tax (state
laws vary). However, there are subtle, but important differences
between each one, which are detailed at:

http://nonprofitmanagement.suite101.com/article.cfm/what_is_a_501c4_organization

Some of the high points are:

- 501(c)3 organizations can receive Federal grants. 501(c)4 organizations cannot.

- Donations to 501(c)3 organizations are tax-exempt. Donations to 501(c)4 organizations are not.

- 501(c)4 organizations can devote an unlimited time to lobbying, and can participate in political campaign activity, including supporting or opposing anyone running for public office. 501(c)3 organizations are strictly limited in their lobbying, and cannot support or oppose anyone running for public office.

So, to be as effective as the NRA in your mind, the ARRL would probably have to form a 501(c)4 organization, in addition to the existing 501(c)3 organization. The NRA does actually have both, with a 501(c)3 called the "NRA Foundation" which does charitable work consistent with the rules for that type of organization, and can benefit from tax-exempt donations and Federal grants, in exchange for separating off the lobbying and campaigning activities into the 501(c)4.

The NRA has over 4 million members. Even if the League was able to enjoy 100% membership among hams in the U.S., that would only be about 650,000. So for similar dues amounts (about $35 annual, $1,000 life), the NRA is able to raise far more money. Do you feel that the trade-offs in forming a 501(c)4 organization for lobbying and campaigning would be worthwhile despite the required increases in expenses, from loss of tax exemption and access to Federal grants, that would have to be spread out over a much smaller membership base? Could there even be a risk to the effectiveness of the League in the eyes of elected officials if they did form a 501(c)4 organization, and thus become "yet another" lobbying/campaigning group?

I think the Citizen's Band was a good idea, but at the worst possible time. As you point out, the FCC took 11 meters away from hams because commercial equipment was still using vacuum tubes, and they wanted CB to have inexpensive radios.

In retrospect, the cynic in me wonders if the commissioners were preassured by an industry that could see the sunset coming for vacuum tubes, and which wanted to clear the shelves before it got stuck with millions of 12BY7's. No matter: whatever the reason for the decision, it worked surprisingly well for about ten years, and then went downhill quickly when invaded by yahoos of all types.

What started the decline is open to question, although the sunspots cycle certainly played a role (1): in the end the small businesses who employed the Citizen's Band as it was intended to be used, and the

people who used CB because they wanted to imitate hams, were both overwhelmed by foul-mouthed trailer-trash who sought out CB as a pipeline into a captive audience whom could be forced to listen to their delusions of grandeur. In the end we all learned anew that a few rotten apples really _do_ spoil the barrel.

Which brings us to the question of why the FCC got burned: a psychologist would say that it was compensation for Vietnam and the civil unrest of the 60's. The FCC was so roundly criticized for CB's decline because the government minions in other bureaus, who had found out the hard way that a million people really _can't_ be wrong, wasted no time blaming the FCC for not getting on the new bandwagon.

After all, the FCC was the most staid of federal bureaus, responsible for issuing licenses to, and assessing fines on, a public thoroughly cowed by the 50's Duck-and-cover drills and McCarthyism: between mild-mannered ham operators and cautious broadcasters and conservative business-band licensees, it simply wasn't in the commission's world-view to imagine radio users who wouldn't follow the rules.

When the Citizen's Band went from a well-intentioned "service" to an uncontrollable nightmare in less than two years, the commission had to take abuse from everyone else in and out of the government who were still smarting from _their_ earlier revelations that they could predict or control the actions neither of the ungrateful whelps who had picked up placards and told a nation of their elders to shove the American Dream, nor of the froggy little native boys who had picked up AK-47's and said "No, Daddy Warbucks, you *won't* do that here".

73, W1AC

(1) There were other factors, as well: the FCC never counted on "Smokey and the Bandit" and other films, which were rushed into theaters to take advantage of the CB craze, and in the process helped to spread it. The first "Bandit" was produced so quickly that the actors didn't even learn how to use two-way radios, with the result that Jackie Gleason was always talking into a CB microphone without pushing the PTT button: industry spin control quickly spread the word that the car was equipped with a "floor switch", and _that_ bit of B.S. resulted in third-party add-on floor switches being quickly rushed onto shelves for sale to Bufford T. Justice wannabees.

IANALB, I was told that the Supreme Court decided a long time ago that the Second Amendment does _not_ give citizens a right to bear arms unless they are part of a well-regulated militia. I presume the militia is the National Guard, but I'd like to hear from the attorneys who read this group.

I remember participating in the last 11m contest to
save the band for hams - don't remember the year.
Wonder what would happen if the FCC re-opened the 11m
band to amateur radio operators as a shared band under
conditions similar to 60m operation?

I'd welcome the chance to find out: I think it would influence a lot of CB operators to copy the practices used not only by hams, but also by "outband" CB'ers, who run SSB above 27.455 MHz, use "Q" signals, and sound more like the ideal ham than many hams.

Outband is a place where a newcomer who is used to a "Children's Band" mode of operation is quickly told to "Lose the echo", "Back off the power", and "Wait your turn". Some of the outbanders are more courteous operators than hams, and allowing amateurs operators to interact with them would be a good way to influence CBers' choices and encourage them to join the amateur ranks.

==> LEAVING ON A JET PLANE TO DAYTON HAMVENTION

"As the song says, 'All our bags are packed and we're ready to go' --
well, almost," said ARRL Hamvention Coordinator Katie Breen, W1KRB. "The
ARRL EXPO area <http://www.arrl.org/expo> is packed up into seven
shipping skids and they are in a truck on their way to Dayton. We here
at headquarters are not only breathing a huge sigh of relief, but many
of us are still wrapping up our individual final details." The Dayton
Hamvention will run from May 16-18 at Hara Arena, just outside Dayton,
Ohio <http://www.hamvention.org>.

Breen said that all around the Newington offices, ARRL staffers are putting the last-minute touches on their Dayton preparations: "Frankie Perez, KB1NQR, is finishing up his schedule for checking cards at the DXCC area. By late Saturday afternoon at Hamvention, there will be an area set up by the card checking just for DX Talk. We've named it the DXCC Discussion Zone."

Also new this year is the "Doctor Is IN" booth. This area, Breen said, is all about and just for technology enthusiasts: "QEX Editor Larry Wolfgang, WR1B, has been putting his creative genius to work and coming up with some great plans for that booth! ARRL Circulation Manager Amy Hurtado, KB1NXO, is finalizing details on what will be available in the bookstore and membership area. And me? Well, since this is my first year of coordinating the EXPO, I think I'm just worrying about everyone else at this point!"

Breen said that one thing she is really excited about with this year's EXPO is that the ARRL will host a larger number of volunteers from around the country: "Some of our newer Section Managers, some as far away as Northern California and Florida will be there. ARRL President Joel Harrison, W5ZN, will be attending forums, meeting and greeting members and generally sharing the good stories of all that is happening here at the League. We're also going to have an international presence with the IARU; we are pleased to welcome IARU President Larry Price, W4RA, and IARU Vice President Tim Ellam, VE6SH."

"Amateur Radio is all about the people," Breen remarked. "Without people on the air in various modes, what would Amateur Radio be? Without hams invested in Public Service, what would Amateur Radio be? Without people in their communities volunteering their time, what would Amateur Radio be? I think the Dayton Amateur Radio Association (DARA) hit the nail on the head with this year's theme of 'People + Radio = Fellowship.' When it all comes down to it, we are communicating with each other, regardless of the mode being used. What better opportunity to come together and communicate than at Hamvention, the country's largest gathering of radio enthusiasts?"

==> LOOK FOR THE JUNE ISSUE OF QST IN YOUR MAILBOX

The June issue of QST, our annual Field Day issue, is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Ride the waves this Field Day with the ARRL Field Day Cookbook, an eight page insert located near the center of the magazine. Learn how to succeed in Field Day by really, really trying. Did you know that bonus points are available when you conduct an educational activity at your Field Day site? Learn how to collect these bonus points and have fun at the same time. Once again, we have some delectable recipes to tempt your palate as you're making those contacts. Along with some tips to make your Field Day a memorable one, we have included a chart of the US Amateur Radio bands. The 2008 ARRL Field Day is June 28-29.

John Stanley, K4ERO, discusses how looking at signals can improve our ability to listen to them in the first of his two-part article "The Beauty of Spectrum Analysis -- Part 1." Kirk Kleinschmidt, NT0Z, takes a look at modern, portable power generators. Rick Littlefield, K1BQT, takes a practical approach for achieving excellent multi-band performance in his article "A No Compromise Off-Center Fed Dipole for Four Bands." And don't forget Kids Day on June 21.

June is a great month for radiosport, with both the ARRL June VHF QSO Party and Field Day. While Field Day is more of an operating event than a contest, it is modeled after a contest in that points are earned for making contacts. ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at these two events and gives his hints and helps for working this VHF contest that runs the weekend of June 14-15. The results of the 2007 ARRL 160 Meter Contest and the 2007 ARRL November Phone Sweepstakes are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

QST Product Review Editor Mark Wilson, K1RO, reviews Tokyo Hy-Power's HL-1.2KFX linear amplifier. According to Wilson, "This amplifier is a compact, easy-to-use 750 W solid state power amplifier for 160 through 10 meters. Its size, weight and flexible ac power requirements make it a good candidate for portable, as well as home station operation." Check out the reviews on the M-Cubed Electronix digital LCRZ meter kit and LDG Electronics RCA-14 transceiver accessory port breakout box, also in the June issue.

Of course, there are the usual columns you know and love in the June QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Hamspeak and more. This month also features Amateur Radio World, the Emergency Communications Course Honor Roll and the ARRL VEC Volunteer Examiner Honor Roll. Look for your June issue of QST in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> FCC DENIES TWO AMATEUR RADIO PETITIONS FOR RULEMAKING

On May 7, the FCC denied two separate Petitions for Rule Making (PRM) dealing with digital issues.

Mark Miller, N5RFX, of Arlington, Texas, sought to delete the FCC's 2006 addition to how it defines data, amend the rules to prohibit automatically controlled stations from transmitting on frequency segments other than those specified in Section 97.221(b), and replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

The FCC denied all three parts of Miller's PRM, saying he "did not set forth sufficient reasons for the Commission" to approve his petition and that "should future experience substantiate Miller's concerns, he may file a new, factually supported petition for rulemaking." The complete copy of the FCC's reply to Miller is on the FCC Web site

<http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1082A1.pdf>.

Ken Chafin, W6CPA, of La Crescenta, California, and Leon Brown, KC6JAR, of Los Angeles, California, also filed a PRM concerning additional spectrum for more repeaters, including digital systems, requesting that the FCC "propose to expand the frequencies on which an amateur station operating as a repeater (repeater station) may operate."

Chafin and Brown argued that additional spectrum is needed for repeater stations because some amateur repeater stations have begun using digital communications protocols" and "digital voice operation is incompatible with existing analog operations [because d]igital voice users are unable to determine if the desired frequency is in use by analog users and can inadvertently cause harmful interference to those users." The men pointed out that coordinating groups have been unable to separate analog and digital voice repeater operations to avoid harmful interference because the available repeater spectrum in the 2 meter band is "fully occupied by existing analog users in most metropolitan areas."

The FCC, after considering Chafin and Brown's PRM, concluded that the PRM did not present grounds for the Commission to amend its rules: "Repeater stations are authorized to transmit on any frequency in the 2 meter band except the 144.0-144.5 MHz and 145.5-146.0 MHz frequency segments. These two segments were excluded to minimize the possibility of harmful interference to other amateur service stations and operating activities, including 'weak signal' operations. Allocating an additional three hundred kilohertz of the 2 meter band to repeater operation would not be consistent with that concern. Rather, it would likely result in increased interference to non-repeater stations." The complete copy of the FCC's reply to Chafin and Brown is on the FCC Web site <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1083A1.pdf>.

==> VETERAN WIRELESS OPERATORS ASSOCIATION HONORS TWO HAMS

At their annual awards banquet on April 26 in New York City, the Veteran Wireless Operators Association (VWOA) <http://www.vwoa.org> honored two Amateur Radio operators with two of the association's top awards: Fritz Raab, W1FR, and John "Jack" Curtis, K6KU. Raab gave the keynote address at the banquet. "The dinner speech was a wonderful presentation of the Amateur Radio Experiment domestically and that which is happening internationally. He explored what may happen, if things go well for the museum stations on 500 kHz and for radio amateurs," said VWOA Chairman Francis Cassidy. "Ever since the emergence of the Global Marine Distress and Safety System, professional radio officers have discussed the prior use of 500 kHz. They know the attributes in the oceans of the world where ground wave transmissions on the oceans provided their primary informational experience of these transmissions."

Fritz Raab, W1FR, of Burlington, Vermont, received the VWOA's De Forest Audion Gold Medal, honoring his "technical achievements in 35 years of radio engineering." Raab serves as the experimental project manager for The 500 KC Experimental Group for Amateur Radio <http://www.500kc.com>.

The ARRL 500 kHz experimental license, WD2XSH, was issued in September 2006 and has 20 active stations.

"I'm kind of excited to see how we can apply modern technology to a 'classic part' of the radio spectrum," Raab told ARRL in 2006 when the experimental license was issued. He pointed out that 500 kHz -- the traditional maritime emergency frequency -- is roughly geometrically halfway between the 136 kHz experimental band and the 160 meter amateur allocation. "In contrast to 160 meters, 500 kHz is low enough to offer good ground wave propagation," Raab said, "but in contrast to 137 kHz, it is high enough to allow us to engage in real communication with realistic equipment."

Raab said he would eventually like to see at least a secondary 600 meter amateur allocation from 495 to 510 kHz. "Besides the opportunities for experimenting at low frequencies, that frequency is well suited to regional groundwave communication," Raab said. He said he envisions the eventual use of the spectrum to provide Amateur Radio emergency communication via groundwave, without having to deal with the vagaries of the ionosphere or causing interference to any other services.

Additional information on the 500 KC Experimental Group for Amateur Radio can be found at the experiment's Web site and also in the July/August 2007 issue of QEX <http://www.arrl.org/qex/2007/07/raab.pdf>.

Raab said that it was "a real honor for me to receive an award named after one of the most important inventions in radio, and given by an organization whose members have included a number of the legends in the field. As a newcomer to 500 kHz through our experimental license, it is especially nice to be recognized by a group of people who have actually used 500 kHz for communication."

Raab is chief engineer and owner of Green Mountain Radio Research, a consulting firm that he founded in 1980. He received his BS, MS and PhD in electrical engineering from Iowa State University. Raab is co-author of "Solid State Radio Engineering" and author of more than 100 technical papers; he has been issued 12 patents. Raab's professional activities include RF power amplifiers, radio transmitters and radio-communication/navigation systems. He is a fellow of IEEE and a member of ARRL, Sigma Xi, Association of Old Crows, Armed Forces Communications and Electronics Association and the Radio Club of America.

Jack Curtis, K6KU, of Granite Bay, California, received the VWOA's Marconi Memorial Award Plaque "for his lifetime efforts of perfecting electronic circuits to generate Morse code as exemplified by the development of the Curtis Keyers."

In an article Brad Mitchell, N8YG, wrote for the ARRL Web site in 2002 <http://www.arrl.org/news/features/2002/02/042/>, he said, "Modern transceivers incorporate many features that not long ago were considered

accessories: CW keyers and SWR meters come to mind. John Curtis, K6KU, created an electronic iambic-keyer circuit and subsequently offered an IC chip to do the job. He revolutionized keying, as we know it."

Mitchell wrote that Curtis, when studying for his Amateur Extra ticket, "decided to get a feel for the requirements of the Extra Class test by undertaking a circuit design project. John built a keyer circuit and learned about digital electronics." This keyer worked so well that Curtis's ham friends told him he should market it. Curtis followed the advice, and in 1969, he placed an ad in "Ham Radio Magazine" announcing the Curtis Electronic Devices EK-38. The -38 and its follow-up, the -39, became so successful that Curtis quit his day job and formed Curtis Electro Devices.

Curtis had established a lot of contacts while working at a semiconductor manufacturing company in the 1960s. These paid off for him when he decided that a keyer circuit could be implemented on a chip. He started with two designs: The 8043 and the 8044. "The 8043 was designed as a completely custom integrated circuit in CMOS," Mitchell wrote. "At the same time, International Microcircuits was looking for a chip in which to test their gate array technology. The first chip down the line was the 8044, produced for Curtis. The 8043 worked first try. It was limited to dit memory, and sold for $7.95 in quantities of 50 or more in 1973. The 8044 also worked right off the bat. It offered dah memory in addition and sold for $24.95 in 1975. The 8044M was introduced in 1980. M stood for meter. A meter could be hooked up to a pin of the 8044M to indicate sending speed."

In 1981 Curtis added mode B keying characteristics to his keyers. Mode B simply added an extra dit or dah when the operator stopped sending, depending on which was sent last. If a dit was sent last, an extra dah would be sent. If a dah were sent last, a dit followed. Curtis added this feature to his 8044B. He introduced several keyers incorporating his new full-featured ICs. The first was the EK430 incorporating the 8043 chip. Curtis also introduced a fully integrated keyboard chip called the 8045. In June 1982, Curtis Electro Devices produced its last keyer, the Lil' Bugger. Offered as the K5 or K5B, it incorporated the 8044 or the 8044B chip, respectively. Both models sold for $39.95 and were quite popular.

In spring of 1986, Curtis introduced the 8044ABM chip. It incorporated selectable A or B modes and the speed meter, becoming an industry standard. In the 1980s, however, microcontrollers were making serious headway and Curtis chips were no longer in demand. MFJ took over part of the line and Curtis Electro Devices ceased operations in April 2000.

The Veteran Wireless Operators Association was founded in 1925 to foster fellowship among wireless operators aboard ship, in the military, and in the shore stations. Through the years, the ranks of the VWOA have included most of the executives and innovators of the broadcasting and communication industry, as well as thousands of radio operators.

Today, in its 83rd year, the VWOA serves as both a link to the history or radio, as well as a bridge to the future. Its members have been, and continue to be, on the front lines of the development of radio and television broadcasting, satellite communications, and the entire digital revolution. Current membership is approximately 300 men and women. Members are concentrated along both US coasts, but members also reside in almost every state as well as Canada and several other countries. For more information on the VWOA, please visit the VWOA Web site <http://www.vwoa.org>.

==> NEW NASA TOOL ALLOWS EXPLORATION OF IONOSPHERE FROM INSIDE

Last week at the Space Weather Workshop in Boulder, Colorado, NASA released a 4D live model of the Earth's ionosphere <http://science.nasa.gov/headlines/y2008/30apr_4dionosphere.htm?list212589>. Without leaving home, anyone can fly through the layer of ionized gas that encircles Earth at the edge of space itself. All that is required is an Internet connection and a free copy of Google Earth <http://earth.google.com/>. NASA calls the ionosphere the "last wisp of Earth's atmosphere that astronauts leave behind when they enter space. The realm of the ionosphere stretches from 50 to 500 miles above Earth's surface where the atmosphere thins to near-vacuum and exposes itself to the fury of the sun. Solar ultraviolet radiation breaks apart molecules and atoms creating a globe-straddling haze of electrons and ions."

Using a Google Earth interface, users can fly above, around and through these regions getting a true 4D view of the situation. "The fourth dimension is time. This is a real-time system updated every 10 minutes," said W. Kent Tobiska, president of Space Environment Technologies and chief scientist of its Space Weather Division. The proper name of the system is CAPS, short for Communication Alert and Prediction System. Earth-orbiting satellites feed the system up-to-the-minute information on solar activity; the measurements are then converted to electron densities by physics-based computer codes. It is important to note, Tobiska said on the NASA Web site, that CAPS reveals the ionosphere not only as it is now, but also as it is going to be the near future.

According to propagation specialist Carl Luetzelschwab, K9LA, this model "can provide Amateur Radio operators a broad view of what the ionosphere is doing 'now.' This broad view is due to the fact that the resolution in the color coding schemes only gives coarse estimates of the six parameters available." Luetzelschwab, former editor of "National Contest Journal" (NCJ) <http://www.arrl.org/ncj/>, writes a propagation column in NCJ and other publications.

"This is an exciting development," said NASA solar physicist Lika Guhathakurta on the NASA Web site. "The ionosphere is important to pilots, ham radio operators, earth scientists and even soldiers. Using this new 4D tool, they can monitor and study the ionosphere as if they're actually inside it." Guhathakurta made his comments on the NASA Web site.

NASA understands that "[h]am radio operators know the ionosphere well. They can communicate over the horizon by bouncing their signals off of the ionosphere -- or communicate not at all when a solar flare blasts the ionosphere with X-rays and triggers a radio blackout." As radio amateurs, we use -- and depend on -- the ionosphere to make contacts.

Tobiska agrees: "For ham radio operators, this is a great application because it enables them to figure out what frequencies that are going to be available for communicating with any part of the world they want to communicate with at that moment in time. So ham radio operators who are in South Carolina want to talk to someone in Europe or Africa, they can know exactly what frequencies to turn to on their dial."

Luetzelschwab said he personally believes that "The importance of this new product is the fact that this is likely the first physical model of the ionosphere available to the widespread Amateur Radio community. This is in contrast to the model in our current propagation predictions -- such as VOACAP, W6ELProp and the like -- that is based on years of measured ionospheric data correlated to a proxy for the true solar ionizing radiation (the proxies being sunspots and 10.7 cm solar flux)."

NASA explained that it appears that this new physical model takes satellite measurements of solar radiation at extreme ultraviolet (EUV) wavelengths (the true ionizing radiation) and inputs this data, along with a geomagnetic field activity index, into a model of the atmosphere to determine electron densities. Luetzelschwab said "Yes, it only offers a broad view now -- but I think it is a sign of things to come."

More information on this tool for radio amateurs can be found on the ARRL Web site <http://www.arrl.org/news/stories/2008/05/06/10081/>.

==> ANNUAL ARMED FORCES DAY CROSSBAND TEST TO BE CONDUCTED MAY 10

The Army, Air Force, Navy, Marine Corps and Coast Guard are co-sponsoring the annual Military/Amateur Radio Crossband Communications Test in celebration of the 58th anniversary of Armed Forces Day (AFD). Although the actual Armed Forces Day is celebrated on the third Saturday in May -- May 17 in 2008 -- the AFD Military/Amateur Crossband Communications Test will be conducted on May 10 to prevent conflict with the Dayton Hamvention(r), scheduled for May 16-18.

The annual celebration features traditional military to amateur crossband communications SSB voice tests and copying the Secretary of Defense message via digital modes. These tests give Amateur Radio operators and short wave listeners an opportunity to demonstrate their individual technical skills and to receive recognition from the Secretary of Defense and/or the appropriate military radio station for their proven expertise. QSL cards will be provided to those stations making contact with the military stations. Special commemorative certificates will be awarded to anyone who receives and copies the digital Armed Forces Day message from the Secretary of Defense.

Military-to-Amateur crossband operations will take place on the dates and time in UTC on the frequencies listed for each station on the Army

MARS Web site. Voice contacts will include operations in single sideband voice (SSB). Some stations, depending on propagation and manning, may not operate the entire period. Participating military stations will transmit on selected Military MARS frequencies and listen for Amateur Radio stations in the Amateur bands. The military station operator will announce the specific amateur band frequency being monitored. Duration of each voice contact should be limited to 1-2 minutes.

The newly updated list of schedules and frequencies <http://www.netcom.army.mil/MARS/docs/ARMEDFORCESDAYFinal.pdf> of participating military stations is published on the Army MARS Web site <http://www.netcom.army.mil/MARS/>.

==>SOLAR UPDATE

Tad "Ne'er shall the Sun arise on such another" Cook, K7RA, this week reports: Again this week, we saw a new, but brief sunspot, sunspot 993. Judging from the polarity of the spot, it looks to be from new Solar Cycle 24; this spot was south of the solar equator, so it has the same polarity as any Cycle 23 spot that was north of the equator. After two days it was gone, not from drifting over the edge of the visible solar disk -- it just disappeared. Geomagnetic indices were mostly quiet this week, except for some only slightly unsettled planetary A index numbers for May 2-3. The next active geomagnetic period is expected May 20, with a planetary A index of 25. For May 9-15, the predicted planetary A index is 8, 5, 5, 5, 12, 8 and 5. Sunspot numbers for May 1-7 were 0, 0, 0, 13, 15, 0 and 0 with a mean of 4. The 10.7 cm flux was 68.5, 68.1, 67.3, 68.3, 67.6, 67.2 and 66.5 with a mean of 67.6. Estimated planetary A indices were 9, 12, 12, 8, 11, 10 and 4 with a mean of 9.4. Estimated mid-latitude A indices were 6, 7, 9, 6, 8, 9 and 5, with a mean of 7.1. For May 9-15, Geophysical Institute Prague predicts quiet conditions May 9, quiet to unsettled May 10, unsettled May 11-13, quiet to unsettled May 14 and quiet again on May 15. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder is May 9 and the Nevada Mustang Roundup is May 9-10. The VK/Trans-Tasman 80 Meter Contest (Phone) and the FISTS Spring Sprint are both on May 10. Be sure to check out the SBMS 2 GHz and Up WW Club Contest, the EUCW Fraternizing CW QSO Party, the CQ-M International DX Contest, the VOLTA WW RTTY Contest and the 50 MHz Spring Sprint on May 10-11. The SKCC Weekend Sprintathon is on May 11 and the RSGB 80 Meter Club Championship (Data) is on May 14. Next weekend, look for another running of the NCCC Sprint Ladder on May 16. The Feld Hell Sprint is May 17. On May 17-18, be sure to make room in your schedule for the EU PSK DX Contest, His

Majesty King of Spain Contest (CW), the Manchester Mineira All America CW Contest and the Baltic Contest. The Run for the Bacon QRP Contest is on May 19 and the NAQCC Straight Key/Bug Sprint is on May 22. All dates listed are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 25, 2008, for these online course sessions beginning on Friday, June 6, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on May 16: There will be no ARRL Audio News on Friday, May 16. The ARRL Letter will be released on that day. ARRL Audio News will return on Friday, May 23.

* ARRL to Blog from Dayton Hamvention: As in previous years, the ARRL will be blogging live <http://www.arrl.org/blog/Dayton%20and%20ARRL%20Expo> from Hara Arena, site of the Dayton Hamvention <http://www.hamvention.org>. In addition to keeping everyone up with the latest and greatest at Dayton, this year's blog will feature video clips. QST Editor -- and Hamvention blogger extraordinaire -- Steve Ford, WB8IMY, said, "The video clips were such a big hit with last year's blog that we decided to do even more of them for this year!" Ford says he plans on featuring new products that are debuting at the Hamvention, as well as all the "fun stuff" that pops up: "Both I and the staff have a lot of fun with this, and we hope those who read the blog do, too." Look for the blog to go "live" Thursday, May 15 and continue throughout the Hamvention.

* Jim Oberhofer, KN6PE, Wins April QST Cover Plaque Award: The winner of the QST Cover Plaque Award for April is Jim Oberhofer, KN6PE, for his article "Outpost: Packet Radio for Emergency Messaging."

Congratulations, Jim! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the May issue by Saturday, May 31.

* History Channel Show to Feature Nikola Tesla: Modern Marvels, a series on The History Channel, will feature electricity pioneer Nikola Tesla in an episode scheduled to air May 14 <http://www.history.com/shows.do?action=detail&episodeId=295798>. Helping out with the program was Bob "Loby" Lobenstein, WA2AXZ; Lobenstein is General Superintendent, Power Operations for New York City's subway system. "We did 8 hours of taping interviews at my 1904 power substation," Lobenstein said. "In addition to the action scenes of me throwing the 100 year old switches and demonstrating the use of power, I did a 'Mr Wizard' talk, showing the various things that 'Mr T' envisioned and invented. Of course, radio had a part and I just had to put the D-104 mic with our club's K2IRT shield into view!" According to The History Channel, Tesla's "...bizarre vision of the future brought him failure, but his genius electrified the world. Travel to Niagara Falls, where in 1893, Tesla installed his new system of Alternating Electrical Current known as AC -- the same power we use today. Uncover the forgotten ruins of Tesla's dream experiment -- a huge tower on Long Island Sound he hoped would wirelessly power the world. Radar, death rays, invisibility devices and earthquake machines: Tesla claimed to have created them all. More than 100 years ago Tesla foresaw the need for alternative energies like geothermal and solar." Check the The History Channel Web site for show times <http://www.history.com/>.

* Colorado Group Receives D-STAR Equipment: The Colorado Council of Amateur Radio Clubs (CCARC) recently teamed up with Ham Radio Outlet (HRO) in Denver to donate a 2 meter, 70 cm and 23 cm D-STAR system stack. According to ARRL Colorado Section Manager and CCARC Board Member Jeff Ryan, K0RM, the two groups hit upon the idea of issuing a Request for Proposal (RFP) to Colorado radio amateurs. "We received three excellent proposals," Ryan said, "and on March 21, CCARC and HRO awarded the D-STAR system to the Colorado D-STAR Association, a consortium of Denver area individuals, clubs and ARES groups." Ryan explained that the goal of the CCARC, which also serves as Colorado's frequency coordination body, was "to spur the interest and use of digital Amateur Radio technology. This is the first D-STAR system that will go on the air in Colorado. The hope is that it is the first of many such systems, ultimately linking the entire Amateur Radio community throughout Colorado and beyond." The 3-band D-STAR system, serving the Denver Metro area and the Front Range of Colorado from Ft Collins to Castle Rock and points east, will be installed this summer at a mountaintop site. The system will have a coverage area of more than 5400 square miles, nearly the size of Connecticut. Ryan said that the RFP placed "special emphasis" on the D-STAR systems being available to ARES groups in the served area, "and also requires the host group to link to any other requesting D-STAR system that comes on the air in Colorado."

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL

cannot assist subscribers who receive The ARRL Letter via this
listserver.)

That's a decent Readers' Digest version of what happened. Part of the problem was a turf war between two Bureaus - the one that issued the licenses and levied the penalties, and the one (that I was in) that did the grunt work of finding and citing the offenders. Throw into that mix the one-and-only attorney in the latter bureau, someone who didn't believe in doing anything that took work (I had many run-ins with her), and a Congress that was short-changing the agency in the number of field personnel authorized because "we weren't supposed to be in the surveillance business" according to a specific congressional committee chair echoing the "man behind the curtain", one JEdgar Hoover, who was dead set against anyone doing law enforcement investigative work except his hand-picked crew at the FBI that he could control with an iron hand.

The ham community fared a little better, because many if not most of the managers who had any responsibility for the ARS and even some of the Bureau Chiefs at the agency were well-known and well-respected (feared ?) hams and they tried really hard to get the ARS to keep its skirts clean. Eventually, though, these fine folks retired or died and the nickel-nursers and "bright young folks" who succeeded them fell into the pattern exemplified by one of my favorite phrases from the biblical Book of Exodus "There arose in Egypt a new Pharaoh who knew not Joseph...." I can count the number of active and experienced hams who are decision-makers about the ARS on the fingers of one hand now.

My personal opinion.

Bill;

The only SCOTUS ruling on the 2nd amendment concerned the possession of a sawed off shotgun. It is currently considering the Washington DC law on possession of hand guns by non law enforcement individuals.

Also the Constitution of the United States provides for the militia in the first part of the text. Look it up....

The term CITIZEN is mentioned four (4) times in the Bill of Rights. In three cases the liberal interpretations means you and me. The fourth mention is in the 2nd amendment. Here liberals want it to mean the government. What is your opinion?

That's rather naive. Think: 'good cop, bad cop.' To the general public, filing a lawsuit is a really big deal. To a government agency, as much government business is dictated by court decisions as by routine administrative work. There are a number of actions that a government agency can take to delay a court case and to run up the expenses of a plaintiff. It would be very telling if it turned out that the FCC attempted none of those maneuvers and allowed the case to go right to court.

I know the 501(c)* series well, having been involved in numerous non-profit groups and having been the treasurer of several. A non-profit organization can easily become a "group" of non-profit organizations by filing some forms and opening some extra checking accounts. The marginal cost of adding another type of organization is vanishingly small. I've been there, I've done that and it's not an issue.

The NRA spends a great deal on advertising and communications. I would expect a group of hams to be able to keep in touch for much less, mainly via the Internet (I doubt that an expensive, glossy magazine would be necessary and the NRA has TWO of them).
The NRA lobbies the Federal government, all fifty state governments and any municipalities that can or might pass gun-related ordinances. A ham radio lobby would only need to lobby the Federal government. Only one office would be needed.
Elected officials cannot pick and choose who will lobby them. They must deal with whatever groups we the people choose to fund and send to Washington. "Credibility" comes from votes and money, not from sucking up to Beltway insiders.

Then there'll be only little credibility. Even if all of the roughly
700,000 radio amateurs in the U.S. belong to such an organization, that
number--spread over our fifty states and territories--means very few
votes and very little money.

I don't see it your way. The ARRL has nowhere near 700,000 members but
it is very effective in lobbying government. It does so with few votes
and little money to spread about. It wasn't long ago that some folks
outside amateur radio wrote about wishing they were as good at lobbying
as radio amateurs.

The point to all this is that it is quite easy to sit on the sidelines
and snipe at the ARRL and to put forth unsubstantiated charges against
it from behind the cloak of anonymity. It is quite another to put
together an alternative to the ARRL. If you desire to do so, nothing is
stopping you.

Well, OK, it's a "virtual" HF rig, and you can only use it FREE for 90 days and then it costs $32.00 user fee per year.

Kind of an interesting concept, sort of "Ham Radio VOIP", Phone or CW mode, and restricted to licensed hams.

Certainly not a replacement for "real radio", but when the bands are dead.......... Could also serve as a neat CW training environment.

I agree with Rick; I've used Echolink for years with a dynamic IP address.

However, let me pass along my experience. I took a working Echolink setup and moved it from one ISP to another, and it refused to work. I could "listen" fine, but I couldn't establish a connection to another node. This was resolved by obtaining a static IP address from the new ISP.

It's not that Echolink needs a static IP address to work . . . it's that my new ISP handles security differently for customers with static IP addresses than for "normal" customers. They do not allow "normal" customers to accept a request for an IP connection from another node; this is a part of their firewall setup. It does make sense; there is vanishingly little legitimate reason for this and they're effectively protecting their customer base from a segment of malicious software. However, Echolink does require this ability; when you connect to a node that action triggers a request from the other node for an IP connection.

So in my case, even though Echolink doesn't need a static IP address, obtaining a static IP address was what allowed it to work. I suspect that this situation isn't unique to my ISP, which is why I'm relating the story.

Not at all obscure if you're one of The Deserving.

Dave's comments are about the characters who inhabit the writings of Hugh Cassidy, WA6AUD (SK) , the editor of the West Coast DX Bulletin from 1968 until 1979.

This is classic Amateur Radio lore, written by someone who "got it".

His depiction of the mentoring between "The Oldtimer on the Hill" and "The QRP'er" are classic Amateur Radio lore, written by someone who "got it".

Now then, does anyone have an eMail address for East Coast Bob?

> little obscure, aren't we?

Not for anyone who ever read The West Coast DX Bulletin. Here's a
sample of the output from the typewrite of WA6AUD:

"WEST COAST DX BULLETIN Published every week by the Marin County DX
Group. One of our local QRPers came by last week, troubled and anxious.
"It's that I figure I'm over the hill", this QRPer explained. "I'm
around the bend for sure. I am sore and troubled and these wounds of
mine....these spiritual wounds....are grievous burdens. I suspect that
I have had it". We nodded in sympathy for we know those dark watches of
the night when a DXer must wrestle with his fears....that he will
miss one. "And just what is the problem?", we asked. "Have you turned
fifty? Or something like that?". The QRPer jumped to his feet and
glared at us. "I thought that you!..you of all people would
understand", he exclaimed. "That you would know
what it is to work your 300th country and there is little left for you.
You!!..", he said and away he went. We did not call after him for we
know the wounds of the spirit and that dreaded 300th country sticker has
felled more than one noble DXer. For one must watch...and $10.50 will
bring you a full year of DX Warning Signals... $12.00 flights the alerts
at you by airmail. Beware the 300th Sticker!! Worse than Normans Woe!!"

If you like it, you may go to the following url to read more:

http://www.geocities.com/k2cddx/wcdxbarch.html

I have about five entire years worth of the WCDXB with which I'll never
part. Where else can one find historic DX doings combined with
magnificent prose?

Oh my!

Well that may explain why my echollink setup doesn't work on my laptop at all from home but works great from other locations just fine. It's really annoying because it passes all the built in tests with flying colors but it simply won't connect even to the test node from home. I know the software works because when I am at the in-laws house it works great. For now I'm stuck having to go though a proxy node, which are few and in demand.

I've been struggling with the idea that it's my router/firewall at home. I've tried both the port forwarding and port triggering approaches without any success and I was starting to think that the router was faulty. I was going to try and set up a different router and see if the problem went away, but it really doesn't make any sense that the router would be to blame.

I suppose my ISP could be filtering stuff, but they don't admit to any filtering when asked. I am restricted from running any "servers" on my dynamic IP, but I was under the impression that they really didn't enforce any firewall rules. (Not that I've tested this idea...)

Well, my IP address isn't a private address in any of the reserved address spaces. I've been known to run bit-torrent downloads with no issues with inbound connections. Of course bit-torrent uses TCP only and EchoLink uses UDP for the voice stream and TCP for the control stream. I suspect that my ISP may be blocking UDP traffic in an effort to keep people from using VOIP phone services as they are a phone company too.

The good news is that I have fiber optic to my house... Fiber doesn't conduct electricity and isn't effected by RF fields so I'm afforded a measure of lighting and RFI protection. Even if they won't allow EchoLink...

I guess I'll try and call their support line and see if I can talk to somebody who will understand what I mean when I say UDP Port 5198...

The fact that you can use EchoLink through a proxy server suggests that your router/firewall is correctly configured. It's possible that you could have a very obscure misconfiguration, but I doubt it. I, too, spent hours fiddling with router and firewall configurations trying to make things work here, so I feel your pain.

In another article you mentioned using bittorrent; I don't know if it requires inbound TCP. But have you actually seen anyone establish a connection TO you? Maybe it operates like Echolink in the sense that much of the functionality works fine even if other nodes can't establish an inbound TCP connection to you.

Since this issue with inbound connections is pretty common, I'm a little surprised that the Echolink folks haven't come up with some kind of built-in test that would identify it. Have you considered putting something on your system that listens for inbound connections -- perhaps a web server -- and trying to connect to it from, say, your in-law's where Echolink is functioning? This would answer the question of whether your ISP is allowing inbound connection requests, at least on the port you use for the test.

Good luck on finding someone at your ISP who understands the term "inbound connection request." I'm thinking that if you ask using the term "filtering", they'll answer a different question than the one you really wanted to ask. I finally did find someone who understood my question and had enough technical knowledge to answer it, but it took a while.

73, Steve KB9X

""Strong earthquake hits China, all ham radio operators stand by
PLEASE HELP
TO SPREAD THE FOLLOWING MESSAGE

Strong earthquake hits China, all ham radio operators stand by A
Magnitude
7.8 earthquake hits Sichuan, China on Monday, May 12, 2008 at 06:28:04
UTC.
Casualties and loss unknown up to now. According to Chinese Radio
Sports
Association, 14.270Mhz, 7.050 and 7.060 Mhz are preserved for amateur
radio
emergency service in the rescue. Please spread this message as far as
you
can and keep the frequencies clean for emergency use. Thank you.

Yesterday, 05:57 PM
BG8AAS from Chengdu, Sichuan reported that local UHF repeater survived
in
the disaster. It keeps functioning from the 1st minute and more than
200
local radio hams are now on that repeater. A group of hams from
Chengdu has
headed for Wenchuan, the center of the quake, trying to setup
emergency
communication services there.

BA8AB, also from Chengdu, Sichuan, is active on the 40m emergency
frequency.
Up to now, no further information available from the center zone of
the
quake. There are a few radio amateurs there, but all of the
communications
have been cut out, including amateur radio.

Yesterday, 06:58 PM
Update

According to BG8AAS, local UHF repeater in Chengdu keeps busy running
after
the quake. It helps to direct social vehicles to transport the wounded
from

Dujiangyan, Beichuan, and other regions. Another UHF repeater also starts
its working in Mianyan, supported by generators.
However, they are going to face a shortage of gas.

Damage in Chengdu remains in the lowest level, but the situation is very
very bad in the counties around. A few towns are said to be destroyed
completely. More than 7000 died in the town of Beichuan. Casualties in
several other towns are still unknown and not counted in the published
numbers.

It is a long and sad day.

Today, 08:31 AM
Your attention please! 14.270Mhz is now reserved for ARES in 5.12 earth
quake in Sichuan, China. Please help to keep this frequency clear.

A group of radio amateurs is now transmitting from Wenchuan, the center of
quake. Its signal is reported to be very weak. They tried to keep
communication with BY8AA in Chengdu, seeking for all resources needed.
During a contact finished a few minutes ago, they were asking for raincoats,
water, tents, and outdoor living facilities.

PLEASE HELP TO FORWARD THIS MESSAGE TO ALL RELEVANT FORUMS, MAILING LISTS,
AND NEWS RESOURCES. MEANWHILE, KEEP THE ABOVE FREQUENCY CLEAN FOR EMERGENCY
COMMUNICATION.

Michael Chen, BD5RV/4""

It's even more alarming that those polite folk are willing to suggest a Maunder minimum on the basis of a slow start to a cycle. They should have checked their Fun an Waganalls, or at leat Wikipedia. We'd pretty much have to miss a whole cycle to declare the possibility of entering a new minimum.

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

I don't know for sure but it could be associated with the FM capture
effect. In other words the greater local FM repeater signal swamps the
PAVE PAWS radar return signal. Not knowing the sensitivity of the radar
or its ability to select out individual frequencies prevents me from
knowing if this is true or not.

Chris

That radio is VHF/UHF, so normally, it is approximately line of sight.
There are repeaters all over that significantly extend "line of sight", but
just how much depends on where you are, the phase of the moone, etc.

The licensing depends on where you are. In the U.S., you need a Technician
class license which requires you to take a test mostly about regulations.
It isn't too tough. There is a fee to take the test on the order of $20 or
so but it keeps changing. The license is good for 10 years, and renewals
are (currently) free. In other countries there are different rules.

..

Bittorrent doesn't *require* inbound connections, but you end up with
more links and it works better if they are allowed. The client I'm
using for bittorrent does the automatic router configuration thing
(Universal Plug and Play I think) and I see inbound TCP connections to
the client so inbound connections don't seem to be the issue (at least
for TCP ports that bittorrent uses.)

It's already been fun talking to tech support and I have yet managed
to get anybody on the phone who knows the difference between TCP and
UDP.

I wonder if it would be worth the effort to ask the EchoLink
developers if they can put in the Universal Plug and Play feature in?
Then all this router configuration difficulty will go away (or at
least most of it will.)

Quoting from an ARRL news release

.. On Saturday, May 17 at the Dayton Hamvention, ARRL President
.. Joel Harrison, W5NZ, plans to announce that the League will expand
.. its identity program to include greater emphasis on technology.
.. Harrison explained that "Ham radio operators, and particularly
.. ARRL members, closely identify with current and emerging radio
.. technology. Today, we are naming 'technology' as ARRL's new
.. fifth pillar."

If ARRL will put enough weight into this idea that it can gain traction, I feel this may be the key to a renewed health for our hobby.

What can we do to help?

==> ARRL INTRODUCES "FIFTH PILLAR" AT DAYTON HAMVENTION

On Saturday, May 17 at the Dayton Hamvention, ARRL President Joel
Harrison, W5ZN, plans to announce that the League will expand its
identity program to include greater emphasis on technology. Harrison
explained that "Ham radio operators, and particularly ARRL members,
closely identify with current and emerging radio technology. Today, we
are naming 'technology' as ARRL's new fifth pillar." ARRL's other four
pillars, the underpinnings of the organization, are Public Service,
Advocacy, Education and Membership. "For hams, expanding the four
pillars to include technology will reinforce one of the organization's
guiding principles -- that ham radio is state-of-the-art, innovative and
relevant," he said.
```

"Radio amateurs have entered a new era. More than a dozen Amateur Radio satellites are presently in orbit with more to come. Software is expanding the capabilities of their radio hardware and communication by digital voice and data is expanding rapidly among hams," Harrison said.

In addition to the new fifth pillar, the ARRL has launched a year-long ham radio recruitment campaign emphasizing the Amateur Radio Service as a scientific national resource. The campaign invites newcomers to discover ham radio in the 21st Century -- where hams are using science, technology and experimentation to explore the radio spectrum. "For more than 90 years, the ARRL has been at the forefront of technology, encouraging experimentation and education through its license training resources, publications and periodicals. ARRL provides its members with top-notch technical information services, trusted product reviews and radio spectrum advocacy," Harrison said. "The ARRL Laboratory is a centerpiece of ham radio technology, contributing to radio electronics experimentation, spectrum development and advocacy, and radio frequency engineering."

Harrison also noted that many hams attribute their affinity to "Amateur" Radio as launching their professional careers in radio engineering, satellite communications, computer science and wireless communications.

"This is less about defining a new course for Amateur Radio, but simply recognizing a course that has always been a precept of radio amateurs and the ARRL," he said. Referring to the federal rules and regulations for Amateur Radio, Harrison explained that one of the defining principles of the Service's very creation by the government is the amateur's proven ability to contribute to the advancement of the radio art. Harrison remarked, "Today's technology is nothing new to ham radio!"

==> HAMS CALLED TO ACTION IN AFTERMATH OF CHINA QUAKE

On Monday, May 12 at 0628 UTC, a magnitude 7.8 earthquake hit Sichuan, China. According to the Chinese Radio Sports Association <http://www.crsa.org.cn/english.php>, the Chinese IARU Member-Society, has designated the following frequencies for emergency services involved in the rescue: 14.270, 7.050 and 7.060 MHz. The ARRL encourages US amateurs to be aware of the emergency operations on those three frequencies.

The CRSA Web site reports the following:

"On the afternoon of May 12, 2008, Wenchuan Area of China's Sichuan province was struck by an earthquake. Communications in some of the surrounding areas are currently cut off, and communications in some other areas are experiencing network congestion because of drastically increased traffic.

"Chinese Radio Sports Association therefore calls on its members to take actions to ensure their amateur radio stations to operate properly, and to the extent possible stand by on often used short-wave frequencies. If any radio signal is heard from the disaster area, please do your best to

understand what is most needed by people in that area and report it to the local government authority. If people in the surrounding areas need to pass messages to their loved ones over the radio, please help them to get in touch and get the messages across as soon as possible.

"Amateur radio stations in the disaster area and surrounding areas if in working conditions should be used unconditionally to assist the local earthquake disaster relief authorities, and subject to permission by the said authorities, to provide communications services to them. For emergency communications purposes, amateur radio stations may also be used to pass messages for local residents on a temporary basis until local telecommunications services resume. Amateur radio stations of all regions should give way to and stand by for emergency communications."

At 1757 UTC on Monday, May 12, Liu Hu, BG8AAS, of Chengdu, a town in the province of Sichuan, reported that a local UHF repeater survived the disaster. "It keeps functioning from the first minute and more than 200 local radio hams are now on that repeater. A group of hams from Chengdu has headed for Wenchuan, the center of the quake, trying to set up emergency communication services there," he said.

Michael Chen, BD5RV/4, said that Yue Shu, BA8AB, also from Chengdu, Sichuan, was reported to be active on the 40 meter emergency frequency on Monday. "Up to now, there has been no further information available from the center zone of the quake. There are a few radio amateurs there, but all of the communications have been cut out, including Amateur Radio," Chen said.

At 1858 UTC, Liu reported that the local UHF repeater in Chengdu "keeps busy running after the quake. It helps to direct social vehicles to transport the wounded from Dujiangyan, Beichuan and other regions. Another UHF repeater also started working in Mianyan, supported by generators, but they are going to face a shortage of gas." Chen said that damage in Chengdu remains in the lowest level, but the situation is "very very bad in the counties around. A few towns are said to be destroyed completely. More than 7000 died in the town of Beichuan. Casualties in several other towns are still unknown and not counted in the published numbers. It is a long and sad day."

At 0831 UTC on Tuesday, May 13, Chen said that a group of radio amateurs is now transmitting from Wenchuan, the center of quake: "Its signal is reported to be very weak. They tried to keep communication with BY8AA, the Sichuan Radio Orienteering Association in Chengdu, seeking for all resources needed. During a contact finished a few minutes ago, they were asking for raincoats, water, tents and outdoor living facilities." -- Information provided by Michael Ye, BD4AAQ, and Michael Chen, BD5RV/4

==> TORNADOES SWEEP ACROSS MIDWEST, SOUTHEAST US

On May 9 and 10, a series of tornadoes swept across the Midwest and Southeast United States. Throughout the storms, Amateur Radio operators who had received the call for assistance responded promptly. An EF2

tornado blew through Stafford County, Virginia on May 9, causing damage to more than 140 homes. On May 10, Picher, a town in the upper northeast corner of Oklahoma, received the brunt of another storm system: an EF4 tornado zoomed through the town, killing six Picher residents. National Weather Service (NWS) officials said the Picher tornado was 1 mile wide at its widest point with wind speeds of 165 to 175 miles per hour. The damage from the Picher storm system extended into Missouri and Georgia, and 22 fatalities are blamed on that storm, 15 in Missouri alone; the Picher storm spawned five twisters in Oklahoma and two in neighboring Arkansas.

An EF2 tornado cut a 4-mile swath through Stafford County on Thursday, May 8. According to Stafford County Emergency Coordinator Curt "Bart" Bartholomew, N3GQ, ARES members handled more than 100 traffic messages during the surge. The American Red Cross, the Stafford Sheriff's Office, the Stafford Sheriff's Office 911 Center and the Stafford Emergency Management Division all received communications support from ARES, and ARES members set up a SKYWARN net 9 PM, May 8 to 1 AM, May 9.

Spotsylvania County Emergency Coordinator Tom Lauzon, KI4AFE, reported that the Rappahannock Area Chapter of the American Red Cross requested ARES support for communications between their headquarters in Massaponax (in the Fredericksburg/Spotsylvania area) and nearby Gayle Middle School in South Stafford County. "The radio room at the Red Cross, K4TS, was staffed from 7:30 AM-6 PM on Friday, May 9," Lauzon said.

At least 160 houses were damaged in a Stafford County neighborhood, said County Administrator Anthony Romanello, including 30 that have been declared a total loss. Stafford County Fire Chief Bob Brown estimated the damage at more than $15 million. Residents said the tornado blasted in at about 10:30 PM Thursday amid a "lurid red-and-green sky laced with lightning that sent many rushing into their basements, " Romanello said.

The Stafford County tornado was one of two that struck Virginia as thunderstorms rolled northeast across the state Thursday night and Friday morning. The NWS confirmed that a smaller tornado, producing 86 to 110 MPH winds, struck Henry and Franklin Counties south of Roanoke about 8 PM Thursday. In addition, straight winds of about 100 MPH damaged several buildings along a mile-long path in Spotsylvania County and Fredericksburg, the weather service said. In central Virginia, the storms flooded some roads and toppled trees. The storms dropped an estimated 1 to 5 inches of rain in central Virginia, and possibly more in places.

In Oklahoma, ARRL Oklahoma Assistant Section Emergency Coordinator Mark Conklin, N7XYO, said served agencies were contacted and ARES groups in the area were placed on standby status: "Amateur Radio SKYWARN spotters were very busy and were of great help to the National Weather Service office in Tulsa during the storm events."

Ottawa County Emergency Management said that homes, businesses and vehicles were destroyed in a 20-square-block area at the south end of

Picher. In some cases, only a home's concrete slab remains. The storm also downed power lines, utility poles and trees. The Oklahoma Corporation Commission reports about 6300 homes and businesses are without electric service due to the storms. The American Red Cross opened a shelter at the First Christian Church in Miami.

Once a boom town of about 20,000, Picher's population had dwindled to about 800 after waste from lead and zinc mines turned the area into an environmental disaster and Superfund site. Oklahoma Emergency Management Director Albert Ashwood said the Federal Emergency Management Agency (FEMA) is unlikely to grant assistance to homeowners to rebuild in the town. Jeff Reeves, 43, who has followed his grandfather and father as Picher's fire chief, has lived in Picher all his life and has watched it slowly decline. He told reporters, "With everything else that's going on here, I'm not sure there is a recovery."

==> DAYTON UPDATE

Crowds have been enthusiastic on this, the opening day of the Dayton Hamvention. Thursday evening featured the ARRL Donor Recognition Reception that honored those who have made a significant financial contribution to the ARRL. If you didn't make it to Dayton this year (or even if you did), you can follow the action on the ARRL blog <http://www.arrl.org/blog/Dayton%20and%20ARRL%20Expo>. An update will also be posted to the ARRL Web site during the weekend, and a comprehensive article will appear in the July issue of QST.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Mel, Snyder, K8MIW, of West Olive, Michigan, asks: I have a question about feeding a folded dipole, spaced about 5 inches between wires. What would be the difference between feeding it with the usual 300 ohm twin lead and using the popular 450 ohm window line as a feed line? I operate mostly on 75 meters. Years ago I used a folded dipole and found it to be an effective and wide band antenna. I have heavy duty window line on hand, but would have to buy the twin lead and the only line I can find is light duty line. Would the mismatch with the 450 ohm line cause any problems?

The Doctor answers -- The most significant difference would be the level of mismatch at the transmitter end. If you are using an antenna tuner, I doubt that you will notice any difference at all.

There will actually be slightly less loss with the 450 ohm (usually closer to 400 ohm in my experience) line. Let's see, if the antenna is about a quarter-wavelength high, the actual feed impedance will be closer to 200 ohms than to the free space value of 300 ohms. With 300 ohm line that results a 1.5:1 SWR at resonance, or 2:1 with 400 ohm line.

I would go ahead and use the window line. It should be less bothered by rain and will probably last longer. If your tuner has a problem at any frequency you operate at, try changing the feed line length by 20 feet or so and see what happens -- you are likely to find a length that works across the band. Just don't roll up any excess. In my cellar shack, I usually put any excess window line between the overhead floor joists, away from other wires and secured with TV standoff insulators.

That should be a great antenna! You may even be able to tune it on other bands, if you have a wide range tuner -- especially 30 meters. On that band, the window line will make even more of an improvement.

==> RONALD A. PARISE, WA4SIR (SK)

Dr Ronald A. Parise, PhD, WA4SIR, passed away Friday May 9, 2008 after a very long and courageous battle with cancer. He was 57. Parise flew as a payload specialist on two space shuttle missions: STS-35 on Columbia in December 1990 and STS-67 on the Endeavour in March 1995. These two missions, ASTRO-1 and ASTRO-2, respectively, carried out ultraviolet and x-ray astronomical observations, logging more than 614 hours and 10.6 million miles in space. Parise was one of the first astronomers to operate a telescope from space, making hundreds of observations during the mission. Amateur Radio on the International Space Station (ARISS) Chairman Frank H. Bauer, KA3HDO, said Parise's personal contributions to these two missions provided scientists with "an unprecedented view of our universe, expanding our understanding of the birth, life and death of stars and galaxies." Information on ARISS can be found on the ARISS Web site <http://www.rac.ca/ariss/oindex.htm>.

First licensed when he was 11, Parise kept Amateur Radio at the forefront of everything he did, including his operations from space. During his two shuttle flights, he spoke with hundreds of hams on the ground. He was instrumental in guiding the development of a simple ham radio system that could be used in multiple configurations on the space shuttle; as a result, his first flight on Columbia ushered in what Bauer called the "frequent flyer era" of the Shuttle Amateur Radio Experiment (SAREX) payload <http://www.arrl.org/ARISS/sarex-past.html>. He was the first ham in space to operate packet radio. "His flight pioneered the telebridge ground station concept to enable more schools to talk to shuttle crew members despite time and orbit constraints," Bauer said. "In his two shuttle flights, he inspired countless students to seek technical careers and he created memories at the schools and communities that will never be forgotten. Ron was also the ultimate ham radio operator -- in space and on the ground."

Bauer said that Parise's love for Amateur Radio and his love of inspiring students continued well beyond his two shuttle flights: "During the formation of the ARISS program, Ron was a tremendous resource to the newly forming international team. I know of many instances where Ron's wisdom and sage advice was instrumental in helping our international team resolve issues when we reached critical technical or political roadblocks. He was a key volunteer in the development of the ham radio hardware systems that are now on-board ISS. The ARISS team

is deeply indebted to WA4SIR for his leadership, technical advice and tremendous vision."

Parise worked hand-in-hand with the students at the US Naval Academy and Embry-Riddle Aeronautical University on the development of their student satellites. He helped develop Radio Jove, a student educational project to listen to the radio signals emanating from Jupiter <http://radiojove.gsfc.nasa.gov/>. Parise spoke at numerous schools over the years, inspiring students to pursue careers in science, math and technology.

"Ron Parise was--and continues to be--an inspiration to countless students, ham radio operators, and friends the world over. His accomplishments were many, including space explorer, pioneer, astrophysicist, pilot, ham radio operator, avionics and software expert, inspirational speaker and motivator, student satellite mentor, husband, father and friend. While he certainly did some truly extraordinary things in his lifetime, Ron Parise is best known and cherished for keeping family and friends first, and for this, we will miss him most," Bauer said.

In an effort to continue Parise's work to inspire the next generation, his family has set up a scholarship fund in Parise's honor for students pursuing technical degrees at Youngstown State University, Parise's alma mater. In lieu of flowers, those interested are welcome to send donations to the Dr Ronald A. Parise Scholarship Fund, Youngstown State University, One University Plaza, Youngstown, OH 44555. -- Information provided by Goddard Amateur Radio Club, WA3NAN

==>SOLAR UPDATE

Tad "Bright as ever shines the Sun" Cook, K7RA, this week reports: We've had another week with no sunspots. Our reporting week for this bulletin runs from Thursday through Wednesday, and this is the fifth bulletin of the year reporting zero sunspots for the week.

Geomagnetic indices were quiet. But next Tuesday, May 20 should be quite active. Predicted planetary A index for May 16-22 is 5, 5, 5, 12, 30, 15 and 8. Geophysical Institute Prague expects quiet conditions May 16-18, quiet to unsettled May 19, active geomagnetic conditions May 20, unsettled May 21, and quiet to unsettled May 22.

Sunspot numbers for May 8 through 14 were 0, 0, 0, 0, 0, 0, and 0 with a mean of 0. 10.7 cm flux was 66.4, 67.3, 67.4, 68, 68, 68.3, and 69 with a mean of 67.8. Estimated planetary A indices were 4, 3, 5, 3, 4, 4 and 3 with a mean of 3.7. Estimated mid-latitude A indices were 3, 3, 4, 3, 3, 3 and 1, with a mean of 2.9.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for another running of the NCCC Sprint Ladder on May 16. The Feld Hell Sprint is May 17. On May 17-18, be sure to make room in your schedule for the EU PSK DX Contest, His Majesty King of Spain Contest (CW), the Manchester Mineira All America CW Contest and the Baltic Contest. The Run for the Bacon QRP Contest is on May 19. The RSGB 80m Club Championship (CW) and the NAQCC Straight Key/Bug Sprint is on May 22. Next weekend is VK/Trans-Tasman 80m Contest (CW) on May 24. The CQ WW WPX Contest (CW) is May 24-25. The MI QRP Memorial Day CW Sprint is May 27. The MI QRP Memorial Day CW Sprint is May 26-27. The ARCI Hootowl Sprint is May 27 (local time) and the SKCC Sprint is May 28. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, May 25, 2008, for these online course sessions beginning on Friday, June 6, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News on Friday, May 16: There will be no ARRL Audio News on Friday, May 16. ARRL Audio News will return on Friday, May 23.

* W1HQ Snake Gets Name, Call Sign: With more than 400 votes tallied, the W1HQ snake finally has a name <http://www.arrl.org/news/stories/2008/02/21/100/>. Sean Kutzko, KX9X, president of The Laird Campbell Memorial HQ Operators Club W1HQ, announced that the snake not only has a name, but a call sign, as well: "Members of the club met over lunch to discuss and vote on all the names that were sent in. The winning entry came from Charlie Liberto, W4MEC, of Hendersonville, North Carolina. He, along with former ARRL staffer R. Dean Straw, N6BV, submitted the name Hamaconda. Paul Trotter, AA4ZZ, of

Charlotte, North Carolina, submitted H1SS as a name. We liked the idea of the snake having a call sign, so the club decided, out of all the great names and call signs sent in, that Charlie's and Paul's submissions fit our mascot perfectly." Both Liberto and Trotter will receive a copy of "The ARRL Antenna Book." Kutzko, the ARRL Contest Branch Manager, was voted in as president of the HQ club at the meeting. ARRL Membership Manager Katie Breen, W1KRB, was selected as vice-president. ARRL Lab Manager and W1HQ Trustee Ed Hare, W1RFI, was selected as the club's technical officer, and ARRL MVP Associate/Production Assistant Carol Michaud, KB1QAW, was selected as club secretary.

* 2008 ARRL Photo Contest Deadline Approaching: Photos submitted for the 2008 ARRL Photo Contest will be accepted through Saturday, May 31. Send your photo (one per entrant) as an e-mail attachment to qst@arrl.org with the subject line "2008 ARRL Photo Contest." Digital photos should be high-resolution. Prints can be mailed to 2008 ARRL Photo Contest, 225 Main St, Newington, CT 06111.

* The National Weather Service has announced a Web page for hams and others to report outages of the NOAA Weather Radio All Hazards Transmitters (NWR). The Web page <http://www.weather.gov/nwr/outages.html> explains how to report a transmitter that may be off air in a listener's area. -- Joe Lachacz

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1605 - May 16, 2008

CLOSED CIRCUIT FINANCIAL REPORT

The following is a closed circuit announcement. Ladies and gentlemen, a few words from the Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ:

--

Yep, its me. A.J. And if I'm here you likely suspect that once again the Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with download F-T-P of the newscast. The coat of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy.

Amateur Radio Newsline report number 1605 with a release date of
Friday, May 16th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Seeds ham radio cubesat sends its first
SSTV back to Earth, a big rescue radio conference is planned for
Canada and Hamvention 2008 opens in Dayton. Find out what's happening
this year on Amateur Radio Newsline(tm) report number 1605 coming your way
right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: FIRST SSTV FROM NEW SEEDS HAM RADIO CUBESAT

The first Slow Scan Television pictures have been received from the
Seeds cubesat satellite which was one of 7 successfully launched
launched on April 28th. JN1GKZ reports that he was one of the first to
successfully copy and record an SSTV image from Seeds and has put it on
his website. PA3GUO adds that he too has received a Seeds SSTV
transmission along with that of the satellites digi-talker. Heres what
it sounded like at his QTH:

--

Actual Sound here

--

The Seeds cubesat transmits on a frequency of 437.485 MHz using either
CW running 110 milliwatts or FM at 450 milliwatts output. It sends
only one stored SSTV picture about every two minutes when the satellite
is in digi-talker mode.

More about Seeds is on-line http://cubesat.aero.cst.nihon-
u.ac.jp/english/blog.html (ANS)

RADIO LAW: FCC TURNS AWAY PETITION TO LIMIT HF DIGITAL MESSAGING

The FCC has turned away a rule making request from Mark Miller, N5RFX,
of Arlington, Texas. In his petition Miller has asked the Commission
to delete the 2006 addition as to how it defines data. He also wanted
to amend the rules to prohibit automatically controlled stations from
transmitting in band segments other than those specified in Section
97.221(b), and replace the symbol rate limits in Section 97.307(f) with
bandwidth limitations.

In denying all three aspects of the N5RFX request, the FCC said that
Miller had not set forth sufficient reasons for the agency to approve

his petition. It did however note that if future actual on the air operational experience substantiate his concerns, that he may file a new, factually supported petition for rulemaking.

Miller's petition was endorsed mainly by hams who oppose unattended wider bandwidth digital messaging systems on the High Frequency bands. It was opposed by the proponents of unattended automated digital messaging who saw its adoption as an impediment to establishing emerging modes.

The opposition mounted a rigorous campaign that included using a website with sign and send opposition letters. In its finding the FCC took note of the cookie cutter responses that come from websites where people can go to submit canned responses and indicated that it discounts their importance in the overall decision making process.

Even so, it appears that Miller did not provide the FCC with enough factual material to make his case and the rules as now written will remain. (FCC)

PUBLIC SERVICE: PA CLUB PRAISED FOR IS MARATHON COMMS

Radio communication was not behind the scenes at Pennsylvania's Run for the Red Marathon on May 5th. According to the Poccono Record, it was right in the middle of the event as a primary communications conduit.

According to the newspaper, members of the Eastern Pennsylvania Amateur Radio Association are every two miles along the marathon route. From running out of cups at stop No. 7 to reporting twisted ankles and pulled muscles, the 30 member ham radio group is totally focused on communicating the needs of the event.

Jerry Truax, N3SEI, of Bartonsville is the county emergency coordinator for amateur radio. He says the group volunteers during emergencies as well as at special events. The Eastern Pennsylvania Amateur Radio Association's next public service event is communications for the Black Bear triathlon June 1st.
(Poccono Record)

RESCUE RADIO: EMERGENCY RESPONSE PLANNING CONFERENCE IN TORONTO IN JUNE

The Emergency E-Mail and Wireless Network will partner in the sponsorship of the 18th World Conference on Disaster Management that slated for June 15th to the 18th in Toronto, Canada. This conference is considered to be one of the most intense information exchange gatherings you can attend with over 85 workshops, plenary and breakout sessions. Some 120 organizations will be there showcasing products to help mitigate prepare for, respond to and recover from emergencies and disasters. Its also an opportunity to network with Disaster Management

professionals worldwide. More about the gathering is on-line at www.emergencyemail.org (emergencyemail.org)

RADIO ADVENTURE: DESPITE STORM VA7MLW WILL CONTINUE VOYAGE AROUND THE WORLD

A Canadian Radio Amateur aboard a damaged sailboat is nursing concussion after being rolled over in the turbulent South Atlantic Ocean. But Glenn Wakefield VA7MLW of Victoria British Columbia says he has no intention of giving up an unusual solo voyage around the world.

Wakefield reported via ham radio from his 12-metre sailboat off the Falkland Islands that the May storm he was inn was expected to subside within 3 days after which he would head toward Port Stanley in the Falkland Islands. That was back on May 6th U-T-C time. Wakefield added that until the weather cleared he would just have to endure whatever Mother Nature sent his way.

A carpenter with two grown daughters, Wakefield sailed from Victoria on September 23rd of 2007. His intention was to become the first North American to circumnavigate the world westbound into prevailing winds that whirl around the bottom of the planet, rather than with the wind as is conventionally done.

VA7MLW is sailing a Phil Rhodes designed Offshore 40 foot sloop called the Kim Chow. It was built by Cheoy Lee in Hong Kong in 1969. For more than 4 years, Wakefield has been making extensive modifications to Kim Chow, preparing the vessel for the rigors of sailing offshore for approximately 10 months. More about Wakefield's journey is on-line at www.kimchowaroundtheworld.com (BC News OnLine)

HAMVENTION 2008: THE DOORS OPEN

As we go to air, the doors are opening at the HARA arena in Dayton, Ohio for the 2008 Hamvention. And according to the events Assistant General Chairman Michael Kalter, W8CI, this years Hamvention has a very simple theme:

--

Kalter: "This year the theme is amateur Radio plus people equals fellowship"

--

Kalter goes on to explain that Hamvention has always been dedicated to bringing people together, so why not make this the years centerpiece:

--

Kalter: "Most all of us involved in Amateur Radio have made friends in Amateur Radio. We enjoy the hobby together and we enjoy doing things together. It may be a special event or a critical situation and we have learned how to work together. That's fellowship.

Hamvention is a place where we see people. Sometimes it's the only time for a whole year. And we have clubs come. We have people from all over the world. People that you might keep skeds with in other parts of the world or other parts of the country. Here you get to see them face to face, eyeball to eyeball. And that's what Amateur Radio is and its what the amateur community does. It's a service and by doing that kind of a service it takes people and that's what creates the fellowship. That's how we see it."

--

**

HAMVENTION 2008: THE ARRL AND ARRL EXPO

So what can a visitor expect this year? Lets start with the American Radio Relay League. As it previously announced, the ARRL is at Hamvention along with its annual ARRL EXPO. That's over in the Ballarena Hall area.

The Leagues Membership Manager and ARRL EXPO Coordinator is Katie Breen, W1KRB. She days that the League will have many new publications and apparel items that it is proud to introduce.

And no ARRL booth at Hamvention would be complete without the annual release of the ARRL Repeater Directory. New for the 2008/2009 edition are the handy indexing tabs on the cover so you can quickly find the listings you're looking for. The Directory has new easier-to-read listings because the pocket-sized edition is actually one-half inch bigger."

**

BREAK 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Hamvention repeater, W8BI, serving Dayton Ohio

(5 sec pause here)

**

HAMVENTION 2008: THE DOCTOR IS IN

A new area within the ARRL EXPO this year is the interactive "Doctor Is IN" booth. Its based on the QST column of the same name and everyone always wants to know who is behind the costume. This year attendees with have a chance to stop by the booth, ask question and have some one-on-one time with ARRL's Technical Experts. You might even be able to submit a stumper and get it published in QST.

This year's Docs On Call will be QST Contributing Editor Ward Silver, N0AX; QEX Editor Larry Wolfgang, WR1B; ARRL Senior Technical Editor Joel Hallas, W1ZR; QST Editor Steve Ford, WB8IMY, and ARRL RF Engineer Mike Gruber, W1MG.

**

HAMVENTION 2008: SOMETHING OR THE YOUNG

Hams in their early years are not being left out. Again, Hamvention Assistant General Chairman Michael Kalter, W8CI:

--

Kalter: "The Dayton Amateur Radio Association along with the ARRL is sponsoring a dinner for youth that will be held at the Dayton Amateur Radio Association clubhouse which is a very nice place to come and visit. That will be occurring on Saturday evening.

"On Friday evening we will be holding a general 'open house' to the general public from 6 to 9 PM. Its not to far from the Hara Arena and will be another exciting thing occurring this year."

--

Kalter says that he hopes as many folks as possible attend these two events. (ARNewsline(tm))

**

HAMVENTION 2008: THE ARRL MOVIE ROOM

Back at the Hara Arena, the ARRL will also sponsor a new Movie Room. This, as a new feature of this year's ARRL EXPO. Planned so far is a presentation on "60 Years of the Worked All Europe Contest." It will be presented by DJ3HW, and DL7RBI, of the Deutscher Amateur Radio Club. That's the German equivalent of ARRL.

The movie room will also screen a variety of DXpedition videos. The highlight will be with Bob Allphin, K4UEE. He will host an interactive session along with the showing of the video of the Peter One DXpedition to the Antarctic. (ARRL)

**

HAMVENTION 2008: ICOM PRESENTS D-STAR THE MOVIE

And speaking about video presentations, word of a new A new D-STAR promotional video is available on the ICOM Global website just in time for Hamvention 2008. There are two versions of the video are available to download. One is targeted at Europe, with the the other aimed at North America and the rest of the world. The video provides an introduction to D-STAR and explains the features available. Look for it at the Icom booth. If you cant make it to this years Hamvention you can download one or both at from http://www.icom.co.jp/world/products/video/d-starmovie/ (Icom)

**

HAMVENTION 2008: HEIL SOUND INTRODUCES TWO NEW MICS

Bob Heil, K9EID and Chip Margelli, K7JA, of Heil Sound, Ltd. are here. They and the bunch at the Heil Sound booth will be introducing the new microphones at this years Dayton Hamvention. First up is the PR 35 which features a large 1.5" diameter diaphragm in a dynamic microphone that outperforms condenser microphones.

The PR 35 was actually a product that songstress Joan Baez asked Bob Heil to build for her. This, after hearing the large diaphragm PR 30. It has a two stage bass roll off switch that allows you to tailor the low end response right at the microphone. The large element is in a very special internal shock mount and comes in an aluminum travel case.

Also being released at Dayton is the PR 781. Its based on the PR 780 that was designed for the Icom 7800 introduction project, the PR 781 is not rig specific. With the right accessories, it works well into any transmitter from a 1956 Harvey Wells to a brand new transceiver like the Yaesu FT 9000, Kenwood TS-2000 or what have you.

The new PR 35 and PR 781, along with the rest of the Heil microphone line will be on display in Audio Alley. To find it consult the Hamvention Program guide or simply follow the Hamvention crowds. More on what's new in ham radio products at Dayton in next weeks Amateur Radio Newsline report. (Heil Sound)

**

HAMVENTION 2008: SOFTWARE DEFINED RADIO FORUM

Turning to this years forums, one we think will receive a lot of attention is on the phenomenal paradigm shift toward Software Defined Radio. One that continues with a significant number of "off the shelf' as well as amateur radio designed hardware offerings.

What's interesting is that its computer programmers are fueling this fire and at the Software Defined Radio Forum attendees will get to hear some of the leaders in this movement describe the vast potential of this rapidly advancing technology.

This forum will also give an overview of some Software Defined Radio projects and show those attending how to get started. Topics will include Basic Software Defined Radio architecture, S-D-R Software and Software Defined Radio computer hardware requirements

Moderated by Eric Ellison, AA4SW, the Software Defined Radio Forum is on Saturday May 17th at 9 a.m. in Meeting Room 1 (Hamvention)

**

HAMVENTION 2008: NFCC WILL UPDATE FREQUENCY MANAGEMENT

If you are a repeater owner or even a concerned user, you won't want to miss the he National Frequency Coordinators' Council open meeting

slated for Friday at 9:15 in meeting room 5. The NFCC as its better known was founded a decade ago as the outcome of a meeting between repeater coordinators, the FCC and the ARRL. It has as its members the majority of frequency coordination bodies in the United States. Moderated by NFCC Chairman Jay Maynard, K5ZC, this forum will update those interested in frequency coordination on the current status of the organization and spectrum management activities in the Amateur Radio service. (NFCC)

**

HAMVENTION 2008 - NEWSLINE BRINGS A TRIP BACK IN TIME

Amateur Radio Newsline will once again host this years Hamvention Town Meeting on Saturday, the 17th. This year with a look back in time.

As ham radio flings itself headlong into the so-called "digital revolution of the 21st century we will pause for a moment to take a look at the hobby over the past half-century to see where it was in the latter 1950's through the mid 1990's.

Our keynote speaker will be Dave Bell, W6AQ, who will host a screening of his 1969 award-winning 28 minute film "The Hams Wide World." This will be the first public showing of the movie in over a quarter of a century and something nobody will want to miss.

As to the rest of the session, its based on the generally accepted fact that most of the change that lead ham radio to the hobby we know today began in the 1960's and continued through to the end of the 20th century. The speakers you will hear all were "kid hams" or "teen hams" in the 1950's. Most got licensed in that era and lived though tubes giving way to solid state; SSB coming into its own H-F; F-M and repeaters on 2 meters replacing point to point A-M on 6 meters and early home-built computers replacing mechanical RTTY systems.

They and many of you were also observers as the long traditional equipment names like Hallicrafters, Hammerlund, Heathkit, and even Collins Radio peaked and then gave ground to newcomers from across the Pacific. Those bearing company names Inoue Communications, Trio and Yaesu. Companies now known a Icom, Kenwood and Yaesu.

In this session you will find out what it was like to study for and take your exam when it was still given at a local FCC field office. What it was like to assemble your first station and in some cases building some or all of it. And you will get a trip down memory lane to when kits were king and find out how being a kid ham back then affected our panel's lives and careers.

We sincerely hope that you will enjoy this trip back through time brought to you by the 2008 Dayton Hamvention and the Amateur Radio Newsline in Meeting Room 3 beginning at 11:30 a,m. We hope to see many of you here.

A full report on Hamvention 2008, in next weeks Amateur Radio Newsline report. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: HAMSPHERE - THE VIRTUAL TRANSCEIVER

Something new on the World Wide Web of interest to ham radio is HamSphere. If you haven't of HamSphere it is best described as an artificial shortwave radio based on the natural laws of radio propagation. One that lets members talk around the world with both ham operators and unlicensed users using a virtual transceiver. You can find about this project on line at www.hamsphere.com. (Southgate)

EMERGING TECHNOLOGY: ORGANIC BASED CARBON MOLECULES

University of Pittsburgh scientists have discovered that certain organic molecules exhibit the properties of atoms under certain circumstances and, in turn, conduct electricity as well as metal.

The research group found that the hollow, soccer-ball-shaped carbon molecules known as fullerenes can hold and transfer an electrical charge much like the most highly conductive atoms. When an electron was introduced into a fullerene molecule, the shape of the electron distribution mimicked that of a hydrogen atom or an atom from the alkali metal group, which includes lithium, sodium, and potassium. Moreover, when two fullerenes were placed next to each other on a copper surface, they showed the electron distribution of their chemical bond and appeared as H2, a hydrogen molecule. The assembly exhibited metal-like conductivity when the team extended it to a wire 1-molecule-wide.

Detailed in the April 18th edition of the magazine Science, the finding is a breakthrough in developing nano-technology. One that provides a new method for designing electronic materials, including inexpensive and multifunctional organic conductors that have long been considered the key to smaller, cheaper, and faster technologies. (Science OnLine)

**

EMERGING TECHNOLOGY: UPDATE ON HD RADIO ROLLOUT

The number of big-market stations turning on High Definition Radio in the past year fell off, while the number of stations in markets 51 to 100 held more steady.

According to an analysis from BIA Financial Network prepared for the Radio World HD Radio Scoreboard, 26 stations in the top 10 markets added HD Radio through mid-December 2007. This, compared to 76 the year before and 117 the year before that.

By contrast, there were 118 stations in markets 51 to 100 turning on HD Radio last year. That, compared to 124 the prior year and 111 in 2006.

One likely reason for the disparity is that proponents of HD Radio started with the bigger markets when they launched their rollout, though by no means are all big-market stations now converted. (RW)

**

ON THE AIR: THE PORTUGAL LIGHTHOUSE ACTIVITY

Members of the Portugal's Algarve DX Group will activate 7 lighthouses simultaneously between May 31st and June 1st. Operations will take place on 40, 30, 20 and 17 meters. There may be some operations on 80 and 15 meters and plans seem definite to include at least one 6 meter operational from the lighthouse at Santa Maria. The modes used will be CW, SSB and RTTY. A free award will be issued to any who contacts all 7 special lighthouse callsigns during activity operations. QSL via CT1GFK, by the Bureau or direct. (Southgate)

**

ON THE AIR: HONG KONG CLUB GETS OLYMPIC CALL

Members of the Hong Kong Amateur Radio DX Association have received official permission from the Office Of The Telecommunications Authority authorizing them to use the special event callsign VR2008O for the period between July 15th and August 31st. This, to celebrate the 2008 Beijing Olympics.

Operations will be primarily on 40 through 10 meters and VHF on 6 meters. The modes used will mainly be SSB, RTTY and P-S-K 31. QSL direct only to VR2XMT: Charlie Ho, PO Box 900, Fanling Post Office, Hong Kong.

There will be no e-QSL or Logbook to the Word electronic cards accepted. Preliminary information and QSL card design have been put on line at www.qrz.com/vr2008o (HKARDXA)

**

ON THE AIR: JARL YOSAKOI KOCHI EVENT

The Japan Amateur Radio League, Inc. will be holding their 50th annual Yosakoi Kochi meeting on May 25th. Look for special event station 8-J-50-J-A-R-L to be active now through May 25th to celebrate this gathering . Activity will be on all bands from 160 meters through 1200

MHz, using CW, SSB, FM and AM. QSL via the JARL QSL Bureau. (OPDX)

**

DX

In Dayton Related D-X news, word that the ARRL's DXCC staff and some additional volunteers will be checking cards at the 2008 Dayton Hamvention during all hours of operation on Friday, Saturday and Sunday. ARRL DXCC Manager Bill Moore, NC1L, said, "Many hams travel from all over the world to attend Hamvention, so card checkers are especially busy." Card checkers will be checking cards for DXCC, Worked All States, the VHF/UHF Century Club and Worked All Continents awards.

In other DX news, word that K9ZO and his XYL will be on holiday from Bermuda during July. He expects to be active as K9ZO portable VP9 and also plans to operate the IARU Contest. He will also monitor 30, 17, 12 and 6 meters. QSL as directed on the air.

Further up in frequency the W3HZU Beacons located in Grid FM-19 on 2.4GHZ and 1.2GHZ have been temporarily taken off the air. This, in preparation to add a third beacon on 5.76GHZ. A message on the amsat-bb will advise when the beacons are back in operation.

Last but by no means least, 5Z4DX, will be active from Shanzu Beach through June 11th. Activity will be on all bands and modes. He also plans to possibly activate Wasini Island from May 25th to the 26th and Lamu Island folowing that. QSL direct to Frank Steffen Gast, Eskifirdi, 735 Eskifjoedur, Iceland.

Above from various DX News Sources

495. PL problem on Icom 27A

Newsgroup: rec.radio.amateur.moderated
Date: 2008-05-17 20:37:51 UTC
From: Dan Yemiola AI8O <Dan@Yemiola.Net>
Message-ID: <g0ne4k$q00$1@news04.infoave.net>
Source record: 2866

Can anybody give me an idea of what is causing this problem with my IC27A?
(I know its 25 years old,but don't laugh, it's paid for).

I am trying to use the radio through several repeaters that require a CTCSS
(PL) tone to access the repeater.
I do not have this problem with repeaters that do not require a PL.

When I am far away from the repeater I use high power (25W) and the PL.
As I get closer to the machine using Hi power, I get to a point where I
cannot access the repeater using PL and Hi power.
If I cut back to low power (<5w) and PL the radio will access the rptr.
If I move farther away from the repeater at some point I can again access
the rptr on high power.

Dan
AI8O

I think the fastest way to diagnose the actual cause of the problem will be to use a service monitor and/or spectrum analyzer, to look at several aspects of the rig's transmitted signal: RF frequency accuracy, signal deviation level (with PL only, and with PL plus voice), and the cleanliness and frequency accuracy of the PL signal.

I'd tend to suspect one of several problems:

- PL tone is off-frequency, or it's being injected at too high or too low a level (typically, around 700 Hz of carrier deviation is considered optimal).

- PL waveform is distorted.

- RF feedback or some other sort of audio-level stability problem (e.g. parasitic oscillation) is injecting an unwanted audio signal into the modulator, and is swamping out the PL tone.

- RF carrier is off-frequency, causing your signal to fall partway outside the passband of the repeater's receiver, and the resulting noise and distortion is causing the PL detector to drop out.

I'm not sure why your signal problems are worse when the repeater's receiver gets a strong signal - the receiver squelch behavior may change with strong signals (I've seen some which behave this way).

Your rig may need nothing more than a recalibration, or it may have components going bad (e.g. electrolytic filter caps drying out with age, and losing capacity).

In any case, finding somebody who has an accurately-calibrated service monitor is probably the first best thing for you to do.

There isn't anywhere that has an upper edge at 430, Phil. There are
countries that only have the middle third of the ham band (430-440) or
lesser portions of that part, but none that have only 420-430. However,
there are many where hams are secondary users.

440 is a shared band already, and this device strikes me as an ideal candidate for sharing. It would have at worst a sporadic impact on our use, at low power, and would be a direct contributor to public safety while reducing risk of life and limb to our firefighters and police. This is one ARRL should support.

I think this is a good idea. I'm not so sure that Amateur Radio is
unhealthy though.

> What can we do to help?

I'm all about technology. I do want it to be relevant, not just
technology for it's own sake.

Good technology:

Getting more people on narrow digital modes.

I still want a PSK31 HT. Young people like to text. Having an HT that
can display text that costs nothing beyond the initial cost of the HT,
and the cost of charging batteries.

Oh yeah, while we're at it, I don't know if that HT with the camera is
still being produced

As much as I prefer regular transceivers, SDR radio would be a pretty
interesting way to go. Big hint to the mfgr's: Sell something usable
that isn't a kilobuck+. I saw the ones out at Dayton, and a better price
point is advised.

Keep on moving with the computer enhanced stuff.

Technology that is so-so.

I've seen a lot about the new Digital voice and data modes such as
D-Star. Lots of investment needed there, and although the transmission
of data is kinda cool, I have concerns about multipath. Isn't as much of
a problem for old school FM. Also while I like the idea of sending data,
I think that digital voice is kind of underwhelming, unless we
subscribe to the view that "it's digital - It's better".

D-Star might need a big kick start, such as emergency groups purchasing repeaters, and maybe some initial users getting some help. Otherwise people who want to put up a digital repeater (note, not a digipeater) might be going to a lot of expense to talk to one or two friends.

"Relevant" is a moving target, Mike. I think we >>should<< encourage technology "just for it's own sake".

Some percentage (invariably a LARGE percentage) mosly likely will end up no more than a technical curiousity (for the moment, anyhow). But if ARRL can light a technological campfire for us to gather round, even small percentages of PBI's maturing will justify the effort.

None of that is new technology, Mike, just "more of the same old stuff in a different sack". "Texting" and "cameras in an HT" are mass marketed by the millions and already owned by every bubble-gummer in the country who has access to a cheap cell phone!

Hopefully this new "pillar" isn't about hints to >>manufacturers<< defining their product offerings, but about fostering an amateur radio environment which breeds a spirit of experimentation and tinkering among >>amateur licensees<<.

I want to see more pages of ham-authored articles in QEX, not more commercial advertising in QST.

Hopefully this new "pillar" is about petitions to FCC to loosen up our spectrum to new modes and techniques. Back when ARRL/FCC were haggling about how to refarm the so-called "Novice bands", I suggested that they be set up as

experimental reservations where forward looking amateurs would be encouraged to try new or unconventional technologies. Instead, FCC copped out and just shuffled some mode-boundaries around.

What an opportunity lost!

Perhaps it's time to send a new copy of my remarks to FCC. See below.

73, de Hans, K0HB
Grand Exhalted Liberator of the Fumes of Solder

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10413
Amateur Service Rules Governing)
Operating Privileges)
)

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are in response to the ARRL proposal for "refarming" the existing HF "Novice sub-bands".

I. Discussion:

The ARRL petition does not address the implementation of new technologies as repeatedly requested by the Commission in WT Docket 98-143. It simply proposes to eliminate the Novice segments and reshuffle that spectrum among existing legacy modes. Rather than gain consensus, the ARRL polling method produced a popularity poll among several non-responsive (to 98-143) choices.

Rather than just "more of the same old stuff", I propose that the Commission take this opportunity to provide the Amateur Radio service with a new incentive to concentrate on paragraph 97.1(b) of the Commission's Rules.

97.1(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

While I agree that the declining Novice license population no longer justifies several significant chunks of spectrum as a "reservation" for improving their Morse skills, and that these "reservations" have outlived their regulatory purpose, I propose that we retain these 50-year old "reservations" and

convert them to a new purpose which will ensure the future Amateur Radio service continues our "proven ability to contribute to the advancement".

II Proposal:

A. To "de-populate" the current Novice segments, I propose that all Novice (and Technician with code credit) licensees be authorized to use Morse code in the same band segments now authorized for General class licensees.

B. I propose that the current Novice sub-bands be set aside as a new "Experimental Reservation" for non-traditional and experimental modes such as digitized voice, digitized image, and other "forward looking" communications methods.

C. I propose that the current power output level of 200W be retained for those segments, and additionally propose that transmitters in those segments must be equipped with auto-adaptive circuitry to reduce output to the lowest level consistent with reliable communications.

D. I recommend that the Commission grant broad discretion to amateurs operating in this "experimental reservation" as to innovative modulation schemes and non-traditional technologies.

Respectfully,

H. Hans Brakob, K0HB

So much of what we use is not terribly new. Certainly SSB was around a
long time before Amateurs adopted it in large numbers. Technology is not
just about what is cutting edge, but is often about can be done
efficiently and at a good cost. While PSK has been around for a while,
availability of computers/soundcards/software to allow Hams to
experiment with it was critical to having many adopt it.

The RF world is fairly mature at this point. (please no comparisons to
that physicist who said "everything is known") The earth shaking
developments tend to come a little further apart these days. I would
guess that most new innovations will be incremental, though it would be
cool to be proven incorrect on that.

I just don't know how many fundamental breakthroughs will be made by
some Ham working in his or her garage.

More to the point in my mature technology outlook is that when something
gets to that point, much of the research and innovation needs a fair
amount of money put into it to get very far.

I wouldn't argue about your idea. I think it is pretty sensible. There
would probably be a lot of hand wringing about it by some folk, I suspect.

Yes, there were bumps, such as the Flea Market ticket mess, but so what?
We got our spot issues cleared up at 8:15 Thursday, got the tents up and
the booth set up by noon.

The weather was the best I've seen in YEARS. Sun or high clouds for all
4 days. Cool enough but not cold. It poured rain Saturday night but
waited until nightfall to start and stopped well before dawn.

Predicted traffic hassles were not, at least for us...

I bought all kinds of goodies, none big, many small, saw old friends
and had a great time. The only downer was the Hotels.Com booking;
do not go to the Econolodge on Edwin Moses drive, folks..

There is no technical reason that the frequencies should come from the middle of an already populated amateur band, and I disagree strongly with your assessment that it would have "at worst a sporadic impact". A few repeaters over a wide geographic area should have ZERO impact on a well-designed classified military radar system (designed and built AFTER the repeaters were on the air), but we all know that wasn't true.

This manufacturer has been using non-certified equipment hoping that his squatting in the amateur bands will be forgiven by getting a large number of technically ignorant police departments to cry that they'll be saving lives -- but not cry why they ought to be using spectrum that is already used.

Read the waiver. The claim that this will be strictly for emergency use is disproven by the statements from police departments who want to use this for warrant service and air-duct inspections.

>I still want a PSK31 HT.

My God, why? APRS has a texting mode. The technology is in place and well-defined. A two-second burst of 1200 baud packet, even assuming a 500 ms TXDELAY, has more text than a standard SMS. That's more than 50 seconds at PSK31. Who's going to install the PSK31 digipeaters? Who is going to develop the technology to determine that a PSK31 signal that is 100Hz off the correct frequency should be digipeated while one that is 50Hz off should not? (1kHz error in an FM HT is common. 1kHz error in PSK31 is a completely different QSO.)

>Oh yeah, while we're at it, I don't know if that HT with the camera is
>still being produced

Ever try sending an image at 1200 baud?

>As much as I prefer regular transceivers, SDR radio would be a pretty
>interesting way to go. Big hint to the mfgr's: Sell something usable

Volume means low price. High price means no volume. Yeah, a $100 SDR HT would be great. It also has more than $100 of parts in it. That $0.10 diode detector is replaced by a $30 DSP chip.

>I've seen a lot about the new Digital voice and data modes such as
>D-Star. Lots of investment needed there, and although the transmission

But you're the guy who wants texting via PSK31? D-STAR texting, bad. PSK31 texting, good?

>D-Star might need a big kick start, such as emergency groups purchasing
>repeaters,

Sorry, but at $10,000 starting, our emergency group isn't going to be buying one. The fact we have no open repeater space, and the cost of a D-STAR radio, makes it certain that D-STAR is a non-starter here.

>people who want to put up a digital repeater (note, not a digipeater)
>might be going to a lot of expense to talk to one or two friends.

I thought I'd like to buy an ID-1 when it came out. At $3000 (one for me, one for someone to talk to) I said "no thanks".

Amateur Radio Newsline(tm) Report 1605 - May 16, 2008

CLOSED CIRCUIT FINANCIAL REPORT

The following is a closed circuit announcement. Ladies and gentlemen, a few words from the Amateur Radio Newsline support fund administrator Andy Jarema, N6TCQ:

--

Yep, its me. A.J. And if I'm here you likely suspect that once again the Amateur Radio Newsline is in desperate need of your financial support. And you would be right.

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access. The costs related to hosting our website and providing you with download F-T-P of the newscast. The coat of equipment repair and upgrade. In essence, all of the costs involved in bringing you 52 newscasts a year as we have done for almost 31 years.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff.

More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www.arnewsline.org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

For the support fund, I'm Andy Jarema, N6TCQ.

--

Thank you Andy.

Amateur Radio Newsline report number 1605 with a release date of Friday, May 16th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Seeds ham radio cubesat sends its first SSTV back to Earth, a big rescue radio conference is planned for Canada and Hamvention 2008 opens in Dayton. Find out whats happening this year on Amateur Radio Newsline(tm) report number 1605 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE: FIRST SSTV FROM NEW SEEDS HAM RADIO CUBESAT

The first Slow Scan Television pictures have been received from the Seeds cubesat satellite which was one of 7 successfully launched launched on April 28th. JN1GKZ reports that he was one of the first to successfully copy and record an SSTV inage from Seeds and has put it on his website. PA3GUO adds that he too has received a Seeds SSTV transmission along with that of the satellites digi-talker. Heres what it sounded like at his QTH:

--

Actual Sound here

--

The Seeds cubesat transmits on a frequency of 437.485 MHz using either CW running 110 milliwatts or FM at 450 milliwatts output. It sends only one stored SSTV picture about every two minutes when the satellite is in digi-talker mode.

More about Seeds is on-line
http://cubesat.aero.cst.nihon-u.ac.jp/english/blog.html (ANS)

**

RADIO LAW: FCC TURNS AWAY PETITION TO LIMIT HF DIGITAL MESSAGING

The FCC has turned away a rule making request from Mark Miller, N5RFX, of Arlington, Texas. In his petition Miller has asked the Commission to delete the 2006 addition as to how it defines data. He also wanted to amend the rules to prohibit automatically controlled stations from transmitting in band segments other than those specified in Section 97.221(b), and replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

In denying all three aspects of the N5RFX request, the FCC said that Miller had not set forth sufficient reasons for the agency to approve his petition. It did however note that if future actual on the air operational experience substantiate his concerns, that he may file a new, factually

supported petition for rulemaking.

Miller's petition was endorsed mainly by hams who oppose unattended wider bandwidth digital messaging systems on the High Frequency bands. It was opposed by the proponents of unattended automated digital messaging who saw its adoption as an impediment to establishing emerging modes.

The opposition mounted a rigorous campaign that included using a website with sign and send opposition letters. In its finding the FCC took note of the cookie cutter responses that come from websites where people can go to submit canned responses and indicated that it discounts their importance in the overall decision making process.

Even so, it appears that Miller did not provide the FCC with enough factual material to make his case and the rules as now written will remain. (FCC)

**

PUBLIC SERVICE: PA CLUB PRAISED FOR IS MARATHON COMMS

Radio communication was not behind the scenes at Pennsylvania's Run for the Red Marathon on May 5th. According to the Pcccono Record, it was right in the middle of the event as a primary communications conduit.

According to the newspaper, members of the Eastern Pennsylvania Amateur Radio Association are every two miles along the marathon route. From running out of cups at stop No. 7 to reporting twisted ankles and pulled muscles, the 30 member ham radio group is totally focused on communicating the needs of the event.

Jerry Truax, N3SEI, of Bartonsville is the county emergency coordinator for amateur radio. He says the group volunteers during emergencies as well as at special events. The Eastern Pennsylvania Amateur Radio Association's next public service event is communications for the Black Bear triathlon June 1st.
(Poccono Record)

**.

RESCUE RADIO: EMERGENCY RESPONSE PLANNING CONFERENCE IN TORONTO IN JUNE

The Emergency E-Mail and Wireless Network will partner in the sponsorship of the 18th World Conference on Disaster Management that slated for June 15th to the 18th in Toronto, Canada. This conference is considered to be one of the most intense information exchange gatherings you can attend with over 85 workshops, plenary and breakout sessions. Some 120 organizations will be there showcasing products to help mitigate prepare for, respond to and recover from emergencies and disasters. Its also an opportunity to network with Disaster Management professionals worldwide. More about the gathering is on-line at www.emergencyemail.org (emergencyemail.org)

**

RADIO ADVENTURE: DESPITE STORM VA7MLW WILL CONTINUE VOYAGE AROUND THE WORLD

A Canadian Radio Amateur aboard a damaged sailboat is nursing concussion after being rolled over in the turbulent South Atlantic Ocean. But Glenn Wakefield VA7MLW of Victoria British Coilumbia says he has no intention of giving up an unusual solo voyage around the world.

Wakefield reported via ham radio from his 12-metre sailboat off the Falkland Islands that the May storm he was inn was expected to subside within 3 days after which he would head toward Port Stanley in the Falkland Islands. That was back on May 6th U-T-C time. Wakefield added that until the weather cleared he would just have to endure whatever Mother Nature sent his way.

A carpenter with two grown daughters, Wakefield sailed from Victoria on September 23rd of 2007. His intention was to become the first North American to circumnavigate the world westbound into prevailing winds that whirl around the bottom of the planet, rather than with the wind as is conventionally done.

VA7MLW is saling a Phil Rhodes designed Offshore 40 foot sloop called the Kim Chow. It was built by Cheoy Lee in Hong Kong in 1969. For more than 4 years, Wakefield has been making extensive modifications to Kim Chow, preparing the vessel for the rigors of sailing offshore for approximately 10 months. More about Wakefield's journey is on-line at www.kimchowaroundtheworld.com (BC News OnLine)

HAMVENTION 2008: THE DOORS OPEN

As we go to air, the doors are opening at the HARA arena in Dayton, Ohio for the 2008 Hamvention. And according to the events Assistant General Chairman Michael Kalter, W8CI, this years Hamvention has a very simple theme:

--

Kalter: "This year the theme is amateur Radio plus people equals fellowship"

--

Kalter goes on to explain that Hamvention has always been dedicated to bringing people together, so why not make this the years centerpiece:

--

Kalter: "Most all of us involved in Amateur Radio have made friends in Amateur Radio. We enjoy the hobby together and we enjoy doing things together. It may be a special event or a critical situation and we have learned how to work together. That's fellowship.

Hamvention is a place where we see people. Sometimes it's the only time for a whole year. And we have clubs come. We have people from all over the world. People that you might keep skeds with in other parts of the world or other parts of the country. Here you get to see them face to

face, eyeball to eyeball. And that's what Amateur Radio is and its what the amateur community does. It's a service and by dong that kind of a service it takes people and that's what creates the fellowship. That's how
we see it."

--

**

HAMVENTION 2008: THE ARRL AND ARRL EXPO

So what can a visitor expect this year? Lets start with the American Radio Relay League. As it previously announced, the ARRL is at Hamvention along with its annual ARRL EXPO. That's over in the Ballarena Hall area.

The Leagues Membership Manager and ARRL EXPO Coordinator is Katie Breen, W1KRB. She days that the League will have many new publications and apparel items that it is proud to introduce.

And no ARRL booth at Hamvention would be complete without the annual release of the ARRL Repeater Directory. New for the 2008/2009 edition are the handy indexing tabs on the cover so you can quickly find the listings you're looking for. The Directory has new easier-to-read listings because the pocket-sized edition is actually one-half inch bigger."

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Hamvention repeater, W8BI, serving Dayton Ohio

(5 sec pause here)

**

HAMVENTION 2008: THE DOCTOR IS IN

A new area within the ARRL EXPO this year is the interactive "Doctor Is IN" booth. Its baed on the QST column of the same name and everyone always wants to know who is behind the costume. This year attendees with have a chance to stop by the booth, ask question and have some one-on-one time with ARRL's Technical Experts. You might even be able to submit a stumper and get it published in QST.

This year's Docs On Call will be QST Contributing Editor Ward Silver, N0AX; QEX Editor Larry Wolfgang, WR1B; ARRL Senior Technical Editor Joel Hallas, W1ZR; QST Editor Steve Ford, WB8IMY, and ARRL RF Engineer Mike Gruber, W1MG.

**

HAMVENTION 2008: SOMETHING OR THE YOUNG

Hams in their early years are not being left out. Again, Hamvention Assistant General Chairman Michael Kalter, W8CI:

--

Kalter: "The Dayton Amateur Radio Association along with the ARRL is sponsoring a dinner for youth that will be held at the Dayton Amateur Radio Association clubhouse which is a very nice place to come and visit. That will be occurring on Saturday evening.

"On Friday evening we will be holding a general 'open house' to the general public from 6 to 9 PM. Its not to far from the Hara Arena and will be another exciting thing occurring this year."

--

Kalter says that he hopes as many folks as possible attend these two events. (ARNewsline(tm))

**

HAMVENTION 2008: THE ARRL MOVIE ROOM

Back at the Hara Arena, the ARRL will also sponsor a new Movie Room. This, as a new feature of this year's ARRL EXPO. Planned so far is a presentation on "60 Years of the Worked All Europe Contest." It will be presented by DJ3HW, and DL7RBI, of the Deutscher Amateur Radio Club. That's the German equivalent of ARRL.

The movie room will also screen a variety of DXpedition videos. The highlight will be with Bob Allphin, K4UEE. He will host an interactive session along with the showing of the video of the Peter One DXpedition to the Antarctic. (ARRL)

**

HAMVENTION 2008: ICOM PRESENTS D-STAR THE MOVIE

And speaking about video presentations, word of a new A new D-STAR promotional video is available on the ICOM Global website just in time for Hambvention 2008. There are two versions of the video are availabe to download. One is targeted at Europe, with the the other aimed at North America and the rest of the world. The video provides an introduction to D-STAR and explains the features available. Look for it at the Icom booth. If you cant make it to this years Hamvention you can download one or both at from http://www.icom.co.jp/world/products/video/d-starmovie/ (Icom)

**

HAMVENTION 2008: HEIL SOUND INTRODUCES TWO NEW MICS

Bob Heil, K9EID and Chip Margelli, K7JA, of Heil Sound, Ltd. are here. They and the bunch at the Heil Sound booth will be introducing the new microphones at this years Dayton Hamvention. First up is the PR 35 which features a large 1.5" diameter diaphragm in a dynamic microphone that

outperforms condenser microphones.

The PR 35 was actually a product that songstress Joan Baez asked Bob Heil to build for her. This, after hearing the large diaphragm PR 30. It has a two stage bass roll off switch that allows you to tailor the low end response right at the microphone. The large element is in a very special internal shock mount and comes in an aluminum travel case.

Also being released at Dayton is the PR 781. Its based on the PR 780 that was designed for the Icom 7800 introduction project, the PR 781 is not rig specific. With the right accessories, it works well into any transmitter from a 1956 Harvey Wells to a brand new transceiver like the Yaesu FT 9000, Kenwood TS-2000 or what have you.

The new PR 35 and PR 781, along with the rest of the Heil microphone line will be on display in Audio Alley. To find it consult the Hamvention Program guide or simply follow the Hamvention crowds. More on whats new in ham radio products at Dayton in next weeks Amateur Radio Newsline report. (Heil Sound)

HAMVENTION 2008: SOFTWARE DEFINED RADIO FORUM

Turning to this years forums, one we think will receive a lot of attention is on the phenomenal paradigm shift toward Software Defined Radio. One that continues with a significant number of "off the shelf' as well as amateur radio designed hardware offerings.

What's interesting is that its computer programmers are fueling this fire and at the Software Defined Radio Forum attendees will get to hear some of the leaders in this movement describe the vast potential of this rapidly advancing technology.

This forum will also give an overview of some Software Defined Radio projects and show those attending how to get started. Topics will include Basic Software Defined Radio architecture, S-D-R Software and Software Defined Radio computer hardware requirements

Moderated by Eric Ellison, AA4SW, the Software Defined Radio Forum is on Saturday May 17th at 9 a.m. in Meeting Room 1 (Hamventionï¿½)

**

HAMVENTION 2008: NFCC WILL UPDATE FREQUENCY MANAGEMENT

If you are a repeater owner or even a concerned user, you won't want to miss the he National Frequency Coordinators' Council open meeting slated for Friday at 9:15 in meeting room 5. The NFCC as its better known was founded a decade ago as the outcome of a meeting between repeater coordinators, the FCC and the ARRL. It has as its members the majority of frequency coordination bodies in the United States. Moderated by NFCC Chairman Jay Maynard, K5ZC, this forum will update those interested in frequency coordination on the current status of the organization and

spectrum management activities in the Amateur Radio service. (NFCC)

**

HAMVENTION 2008 - NEWSLINE BRINGS A TRIP BACK IN TIME

Amateur Radio Newsline will once again host this years Hamvention Town Meeting on Saturday, the 17th. This year with a look back in time.

As ham radio flings itself headlong into the so-called "digital revolution of the 21st century we will pause for a moment to take a look at the hobby over the past half-century to see where it was in the latter 1950's through the mid 1990's.

Our keynote speaker will be Dave Bell, W6AQ, who will host a screening of his 1969 award-winning 28 minute film "The Hams Wide World." This will be the first public showing of the movie in over a quarter of a century and something nobody will want to miss.

As to the rest of the session, its based on the generally accepted fact that most of the change that lead ham radio to the hobby we know today began in the 1960's and continued through to the end of the 20th century. The speakers you will hear all were "kid hams" or "teen hams" in the 1950's. Most got licensed in that era and lived though tubes giving way to solid state; SSB coming into its own H-F; F-M and repeaters on 2 meters replacing point to point A-M on 6 meters and early home-built computers replacing mechanical RTTY systems.

They and many of you were also observers as the long traditional equipment names like Hallicrafters, Hammerlund, Heathkit, and even Collins Radio peaked and then gave ground to newcomers from across the Pacific. Those bearing company names Inoue Communications, Trio and Yaesu. Companies now known a Icom, Kenwood and Yaesu.

In this session you will find out what it was like to study for and take your exam when it was still given at a local FCC field office. What it was like to assemble your first station and in some cases building some or all of it. And you will get a trip down memory lane to when kits were king and find out how being a kid ham back then affected our panel's lives and careers.

We sincerely hope that you will enjoy this trip back through time brought to you by the 2008 Dayton Hamvention and the Amateur Radio Newsline in Meeting Room 3 beginning at 11:30 a,m. We hope to see many of you here.

A full report on Hamvention 2008, in next weeks Amateur Radio Newsline rreport. (ARNewsline(tm))

**

EMERGING TECHNOLOGY: HAMSPHERE - THE VIRTUAL TRANSCEIVER

Something new on the World Wide Web of interest to ham radio is HamSphere. If you haven't of HamSphere it is best described as an

artificial shortwave radio based on the natural laws of radio propagation. One that lets members talk around the world with both ham operators and unlicensed users using a virtual transceiver. You can find about this project on line at www.hamsphere.com. (Southgate)

CHANGING OF THE GUARD: ASTRONAUT / HAM RON PARISE, WA4SIR - S.K.

Some things are not easy and this is one of those times. I'm Bill Pasternak, WA6ITF, with the sad news that Astronaut and ham radio operator Ron Parise, WA4SIR, passed away on Friday May 9th. This, following a long battle with cancer.

Ron Parise flew as a payload specialist on two Space Shuttle missions. He first went on-orbit in December 1990 on STS-35 on the Space Shuttle Columbia. He next flew on STS-67 on the Space Shuttle Endeavour in March 1995. These two missions, called ASTRO-1 and ASTRO-2 respectively, carried out Ultraviolet and X-ray astronomy observations. And during those flights, WA4SIR logged over 614 hours and 10.6 million miles in space.

According to ARISS International Chairman Frank Bauer, KA3HDO, Ron Parise was got his license at age 11, From that point on he kept the amateur radio at the forefront of everything he did. This included his operations from space.

During his two Space Shuttle flights WA4SIR talked to hundreds of hams on the ground, giving new meaning to the phrase the "ultimate DX-pedition". He
was also instrumental in guiding the development of a simple ham radio system that could be used in multiple configurations on board the Space Shuttle.

This reporter first got to know Ron Parise back in 1989 when with the late Roy Neal, K6DUE, we produced two video's that WA4SIR appeared in. These were "SAREX 90" and later "Ham Radio In Space." What nicer tribute can I give him but to say he was a joy to work with and a truly nice person to know.

In an effort to continue Ron's tireless work to inspire the next generation, the Parise family has set up a scholarship fund in Ron's honor.
The scholarship is for students pursuing technical degrees at Youngtown

State University, where Ron received his Bachelors of Science degree. In lieu of flowers, those interested are welcome to send donations to the Dr. Ronald A. Parise Scholarship Fund, Youngstown State University, One University Plaza, Youngstown, Ohio 44555. (KA3HDO, N6BIS)

EMERGING TECHNOLOGY: ORGANIC BASED CARBON MOLICULES

University of Pittsburgh scientists have discovered that certain organic molecules exhibit the properties of atoms under certain circumstances and, in turn, conduct electricity as well as metal.

The research group found that the hollow, soccer-ball-shaped carbon molecules known as fullerenes can hold and transfer an electrical charge much like the most highly conductive atoms. When an electron was introduced into a fullerene molecule, the shape of the electron distribution mimicked that of a hydrogen atom or an atom from the alkali metal group, which includes lithium, sodium, and potassium. Moreover, when two fullerenes were placed next to each other on a copper surface, they showed the electron distribution of their chemical bond and appeared as H2, a hydrogen molecule. The assembly exhibited metal-like conductivity when the team extended it to a wire 1-molecule-wide.

Detailed in the April 18th edition of the magazine Science, the finding is a breakthrough in developing nano-technology. One that provides a new method for designing electronic materials, including inexpensive and multifunctional organic conductors that have long been considered the key to smaller, cheaper, and faster technologies. (Science OnLine)

**

EMERGING TECHNOLOGY: UPDATE ON HD RADIO ROLLOUT

The number of big-market stations turning on High Definition Radio in the past year fell off, while the number of stations in markets 51 to 100 held more steady.

According to an analysis from BIA Financial Network prepared for the Radio World HD Radio Scoreboard, 26 stations in the top 10 markets added HD Radio through mid-December 2007. This, compared to 76 the year before and 117 the year before that.

By contrast, there were 118 stations in markets 51 to 100 turning on HD Radio last year. That, compared to 124 the prior year and 111 in 2006.

One likely reason for the disparity is that proponents of HD Radio started with the bigger markets when they launched their rollout, though by no means are all big-market stations now converted. (RW)

**

ON THE AIR: THE PORTUGAL LIGHTHOUSE ACTIVITY

Members of the Portugal's Algarve DX Group will activate 7 lighthouses simultaneously between May 31st and June 1st. Operations will take place on 40, 30, 20 and 17 meters. There may be some operations on 80 and 15 meters and plans seem definate to include at least one 6 meter operational from the lighthouse at Santa Maria. The modes used will be CW, SSB and RTTY. A free award will be issued to any who contacts all 7 special lighthouse callsigns during activity operations. QSL via CT1GFK, by the Bureau or direct. (Southgate)

**

ON THE AIR: HONG KONG CLUB GETS OLYMPIC CALL

Members of the Hong Kong Amateur Radio DX Association have received official permission from the Office Of The Telecommunications Authority authorizing them to use the special event callsign VR2008O for the period between July 15th and August 31st. This, to celebrate the 2008 Beijing Olympics.

Operations will be primarily on 40 through 10 meters and VHF on 6 meters. The modes used will mainly be SSB, RTTY and P-S-K 31. QSL direct only to VR2XMT: Charlie Ho, PO Box 900, Fanling Post Office, Hong Kong.

There will be no e-QSL or Logbook to the Word electronic cards accepted. Preliminary information and QSL card design have been put on line at www.qrz.com/vr2008o (HKARDXA)

**

ON THE AIR: JARL YOSAKOI KOCHI EVENT

The Japan Amateur Radio League, Inc. will be holding their 50th annual Yosakoi Kochi meeting on May 25th. Look for special event station 8-J-50-J-A-R-L to be active now through May 25th to celebrate this gathering . Activity will be on all bands from 160 meters through 1200 MHz, using CW, SSB, FM and AM. QSL via the JARL QSL Bureau. (OPDX)

**

DX

In Dayton Related D-X news, word that the ARRL's DXCC staff and some additional volunteers will be checking cards at the 2008 Dayton Hamvention ï¿½
during all hours of operation on Friday, Saturday and Sunday. ARRL DXCC Manager Bill Moore, NC1L, said, "Many hams travel from all over the world to attend Hamvention, so card checkers are especially busy." Card checkers will be checking cards for DXCC, Worked All States, the VHF/UHF Century Club and Worked All Continents awards.

In other DX news, word that K9ZO and his XYL will be on holiday from Bermuda during July. He expects to be active as K9ZO portable VP9 and also plans to operate the IARU Contest. He will also monitor 30, 17, 12 and 6 meters. QSL as directed on the air.

Further up in frequency the W3HZU Beacons located in Grid FM-19 on 2.4GHZ and 1.2GHZ have been temporarily taken off the air. This, in preparation to add a third beacon on 5.76GHZ. A message on the amsat-bb will advise when the beacons are back onin operation.

Last but by no means least, 5Z4DX, will be active from Shanzu Beach thnrough June 11th. Activity will be on all bands and modes. He also plans to possibly activate Wasini Island from May 25th to the 26th and Lamu Island folowing that. QSL direct to Frank Steffen Gast, Eskifirdi, 735 Eskifjoedur, Iceland.

HAMVENTION 2008: W5KUB TO PROVIDE LIVE STREAMING VIDEO MAY 14 - 18

And finally this week, if you can't make it to this years Dayton Hamvention, Tom Medlin, W5KUB, has the next best thing. From May 15th to the 18th Tom will being many of this years Hamvention highlights right to your home computer screen via broadband video streaming.

Web transmissions from the Hamvention were slated to begin on Thursday May 15th at Fleamarket spaces 3350 and 3351. Once the show opens on Friday, Tom plans nonstop coverage until closing on Sunday afternoon. Then he invites you to vicariously drive back to his home in Memphis with him. This, as he passes through some of the prettiest countryside that this nation has to offer.

So if you can't be there in person, take your web browser to http://w5kub.com and let Tom Medlin bring the magic of Hamvention 2008 directly to your home computer screen

Again, the U-R-L is http://W5KUB.com. There is also a direct link to Tom's streaming video site from the Dayton Hamvention website at www.hamvention.org. (W5KUB)

My thought is this.. would you want an 1 watt transmitter to be used
to save the lives of your loved ones when you know there could be 1500
watts of power in a nearby radio on the same frequency?

I think the FCC could allocate a frequency off the ham band, possibly
in the commercial market that will suffice, especially where not more
than a few watts are allowed. Such as the GMRS/FRS band?

The State of Oregon is putting out six figures to provide for a D-Star EMCOMM network and a Pactor network. It's being pushed by several folks who got either ICOM or the State or both to subsidize their personal D-Star radios and/or are "blessed with resources" to get one on their own. Not counting my HF rig, I have five radios for voice comms: a VHF and a UHF in the home comm room, my mobile, my HT, and my "grab-and-go". Who is going to subsidize that? I surely can't.

Pactor is fine - my setup works at minimal cost- as long as it's Pactor I. The cost of the proprietary modem for Pactor II and III is in the high three figures if not four by now with the falling dollar.

My perennial "what hath technology wrought" rant....

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

512. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2008-05-22 06:05:03 UTC

URL: http://www.panix.com/~rram/usenet/rri/index.html

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

> My perennial "what hath technology wrought" rant....

My misgivings in this area are related more to the complexity of the technology, although the cost is certainly a consideration.

My experience in real disaster situations suggests that simple is better and that much of the reason to have amateur radio participation is tied to the simplicity of the gear that we use. The reason we're there in the first place is that the commercial infrastructure isn't functioning. Tying our operations to high-tech equipment puts us in the same realm as what we're there to replace.

My experience also suggests that it's more the human factor than the equipment factor that makes us valuable in a disaster operation. The training and experience that the human has is much more important than what kind of equipment is in use.

I suppose that the response to this is that the best of all worlds is a trained cadre of operators using the best state-of-the-art equipment available. In theory this is correct, but in the real world of an actual disaster operation things might be a lot different.

Indeed, it went well, except as you say for the ticket issues. I talked with a DARA official at a banquet, and they are VERY aware of what happened, and that it must NEVER happen again.

At a banquet, he related that in 2000 DARA had $70 in the bank, and $190k in debts. This year, they gave the non-profit organization $5k as thanks for support of the Hamvention, for development work. Talk about a turn around!

APRS texting isn't terribly convenient, and you have to put up with the
rest of the squacking to get it.

A two-second burst of 1200 baud packet, even assuming a 500 ms
> TXDELAY, has more text than a standard SMS. That's more than 50 seconds at
> PSK31.

I'm not talking about sending data, or long messages, just ones similar
to what is sent in cell phone text messages.

This is about getting people interested and using Ham radio. It isn't
necessarily about getting something that you or even I would buy.
Younger folks, high school kids, would likely buy into something like that.

>Who's going to install the PSK31 digipeaters?

What I envision would be likely simplex. Although a repeater could come
into the picture somewhere, it wouldn't need to be a digipeater.

> Who is going to develop
> the technology to determine that a PSK31 signal that is 100Hz off the correct
> frequency should be digipeated while one that is 50Hz off should not? (1kHz

> QSO.)

These are all pretty minor technical problems. I imagine that a person
might be able to differentiate between signals in an old school manner,
by tuning them in.

>> Oh yeah, while we're at it, I don't know if that HT with the camera is
>> still being produced
>
> Ever try sending an image at 1200 baud?

I've sent SSTV images in a fairly short time. They aren't large images,
but along with the texting I speak of, make a fun little gadget for
people to play with. Might even be of some emergency use.

I have to say that I probably would never buy such a device. That
doesn't make it a dumb idea though. If there was one thing I would like

to counsel Hams on , it is the idea that whatever you or I are into at
the moment is not what everyone is into, and it shouldn't be either.
Some modes such as IRLP or Echolink, I don't even consider "radio", but
hey, a lot of people like them a lot, so I won't argue.

>> As much as I prefer regular transceivers, SDR radio would be a pretty

>> of data is kinda cool, I have concerns about multipath.
>
> But you're the guy who wants texting via PSK31? D-STAR texting, bad. PSK31
> texting, good?

I don't declare D-Star Texting "bad", but I do declare the PSK31
texting pretty darn good. PSK31 has a huge advantage in that it is
pretty cheap, and not proprietary. D-Star is decidedly not cheap, and is
quite proprietary. Wanna use D-Star? Get out the plastic and go
without something else for a couple years.

>> D-Star might need a big kick start, such as emergency groups purchasing
>> repeaters,
>
> Sorry, but at $10,000 starting, our emergency group isn't going to be
> buying one. The fact we have no open repeater space, and the cost of a
> D-STAR radio, makes it certain that D-STAR is a non-starter here.

I think that what would be needed is for local governments to do the
actual purchasing, then hand it over to the Hams. The Hams are going to
have to have regular access to the D-Star repeater, or else they won't
buy-in.

My honest opinion however is that this is one of those technology
solutions that just add too much technology to the mix. One of the big
complaints from emergency responders is that they can't talk to each
other. This is due to the introduction of too much structure upon the
system. With D Star, we do the same thing with Hams.

>> people who want to put up a digital repeater (note, not a digipeater)
>> might be going to a lot of expense to talk to one or two friends.
>
> I thought I'd like to buy an ID-1 when it came out. At $3000 (one for me,
> one for someone to talk to) I said "no thanks".

Yup. And the big problem as far as Amateurs go is that they can't get into the system. Whereas you or I can build a CW, SSB, FM, or PSK31 radio for most any application we'd like, we can't do that with D-Star. So unless those prices come waaaay down, D-Star is going to be a very low volume mode, probably used only by emergency groups. Of course if that is the case, they shouldn't be operating it on the Amateur bands, because they can get more use out of it on their own frequencies, which won't have Amateur reestrictions.

I know of a number of members of ARES and clubs wanting to be setup
with all kinds of high-tech communications in case of emergency. I
have also noticed that in most cases, while they receive lots of
verbal support and volunteers, they end up in the exercises with a
severe shortage of operators.

I volunteered in the aftermath of Hurricanes Hugo and Frances and many
very localized disasters. Locals aren't available in the aftermath of
area-wide disasters and in local emergencies, often comm needs require
multiple repeaters or very many HT communications.

In the early days of Amateur Radio, "High Tech" meant communicating
without wires and homing pigeons. The important thing is timely and
accurate communications. today's "High-tech" can help, but the
important thing is " any means necessary".

> My perennial "what hath technology wrought" rant....

Unfortunately, it's how they think. One of my old chestnuts is that the reason that Ham radio is often the only thing working when the wheels fall off is that:

1.Our organization is ad-hoc. Lots of people who know how to communicate, but are not within some strict hierarchy.

2.We have equipment that will talk to our equipment. Now sometimes that means that we're using old school SSB or FM or CW. That's bad? No that's good! The idea is to pass the message, not to sit in the seat and feel really great about the whiz-bang technology we're using.

3.We know how to get the messages across. There is something to be said about understanding propagation. Going to send a message on 20 meters to someone 100 miles away? 40 meters at night? How about 50 miles away on 440 simplex? A little bit of knowledge is pretty handy.

Now what I see is the folk who would have us help when disaster strikes have noted that we seem to pull rabbits out of our hat, and they like what they see. But as people who impress a hierarchy, organization, and levels of technology on everything they touch, now want to do the same to us. After Katrina, I was kind of shocked by all the "This is what you Amateurs Have To Do" articles and speeches. And each article had a common thread - we amateurs had to become more like the people who experienced failure. Just didn't make sense.

And yet they can't seem to figure out why their systems fail when it all falls apart. My guess is that we will be looking at more technology impressed on the system. And it will probably fail too.

I'm glad things are working. I suspect that the turnaround required two things -- good management and an actual market for what they're selling. Maybe what we're going to see is less hamfests but bigger ones. A new hamfest comes to Rochester MN this summer (http://www.rarexpo.org/) so it will be instructive to see how they do.

In the end, I decided to go, and had a blast as usual. sold a couple items, my SB200 linear, and my trusty old IC-745. (gosh, I miss it already, my first HF rig)

With the proceeds and a little extra, I bought a Kenwood TS480SAT, which I'll put in the Vitara as soon as I get over this nasty cold.

On another note, I really think that it is time that DARA start looking at another venue for the Hamfest. Yes, there is a lot to be said for tradition, but in the 6 or so years I've been going, the Hara arena has deteriorated quite a bit. It wasn't in that great of shape when I first went either. Rusty exit doors, missing floor tiles. The parking lot is getting awfully pitted, and my guess is that it isn't ever going to be repaved. It's kind of sad, but these sort of things happen. I think the place is heading downward, and it's just a matter of time before they close. At that point DARA will have to find a new venue.

No, they are not. The ICOM radios can have the D-Star option added at
local expense. Neither the 2820 nor the 2200 have D-Star built in. There
certainly is no D-Star repeater support.

The pactor is intended primarilly for county to state communication, not
user to user.

That's a user-interface issue, not a technology issue. I could write software tomorrow that hooks my D700 up and sends APRS text as easily as email, if someone hasn't already. I've seen aftermarket keyboards for the D700 to do this.

>and you have to put up with the rest of the squacking to get it.

I have no idea what you mean by this. You aren't going to listen to the PSK31 audio any more than you have to listen to the APRS audio when using it.

>> A two-second burst of 1200 baud packet, even assuming a 500 ms

>> PSK31.
>
>I'm not talking about sending data, or long messages, just ones similar
>to what is sent in cell phone text messages.

"Cell phone text messages" are "data". Two seconds of 1200 baud packet can send more "cell phone text" than more than 50 seconds of PSK31. If people had to wait a minute for their SMS text messages to be sent instead of the few seconds it does, they'd be less likely to use it.

>This is about getting people interested and using Ham radio.

We HAVE the technology in place that is better than that proposed as the salvation of amateur radio. No, a PSK31 HT isn't going to do anything to support the hobby or bring new people in that APRS HTs haven't already done. A PSK31 HT is an interesting concept; difficult product.

>It isn't
>necessarily about getting something that you or even I would buy.

If nobody buys it, then it won't ever be cheap. If WE, the existing amateur base doesn't support it, it ain't gonna happen. Voice HTs work

because there is an existing repeater infrastructure. APRS HTs work only
because there is an existing APRS network infrastructure. If there is no
VHF PSK31 infrastructure, it isn't going to be used.

>Younger folks, high school kids, would likely buy into something like that.

No "younger folks" are going to buy a new technology where there is no
infrastructure to support them.

>>Who's going to install the PSK31 digipeaters?
>
>What I envision would be likely simplex.

The range of a PSK31 HT would be very short. FRS distances, at best. It
would be extremely sensitive to antenna orientation. You couldn't load
a message and then put the HT back on your belt while it takes a minute
to send. Who is going to pay several hundred dollars for an HT that can
only communicate three blocks in a city?

>Although a repeater could come
>into the picture somewhere, it wouldn't need to be a digipeater.

PSK31 is a DIGITAL mode. Repeaters for digital data are ofen called
digipeaters. WHO is going to install these repeaters? You can't use
the existing ones -- PSK31 is narrowband FSK, existing repeaters are
relatively wideband FM. If you are going to use an entire FM voice channel
bandwidth, you might as well use standard 1200 baud packet and APRS.
Existing technology. Where are all the youngsters using APRS messaging?
Why do you believe they would flock to a slower, shorter range system?

> These are all pretty minor technical problems. I imagine that a person
>might be able to differentiate between signals in an old school manner,
>by tuning them in.

A PERSON might be able to, but a DIGIPEATER is not a person. And these
YOUNG PEOPLE you want to lure into the hobby with a PSK31 HT aren't going
to want to have to tune around hoping to be on the right frequency when
their friends send them messages. It's got to be channelized to make
it simple. An HT that's off channel by as little as 100Hz for PSK31 is
a different channel. That's REALLY tight technical standards for amateur
gear.

>> Ever try sending an image at 1200 baud?
>
>I've sent SSTV images in a fairly short time. They aren't large images,

They are also not PSK31 data. Entirely different mode.

>I have to say that I probably would never buy such a device. That
>doesn't make it a dumb idea though.

No, the technical issues do, and expecting it to bring lots of new people
into the hobby as something similar to SMS text messaging is silly. We have
better technology already in our hands; where are the people?

>> But you're the guy who wants texting via PSK31? D-STAR texting, bad. PSK31
>> texting, good?
>
> I don't declare D-Star Texting "bad", but I do declare the PSK31
>texting pretty darn good.

In it's place, perhaps. Sitting in a radio shack with a $1000 HF radio
and a computer to decode it, yes. In an HT, no.

>PSK31 has a huge advantage in that it is
>pretty cheap, and not proprietary. D-Star is decidedly not cheap, and is
> quite proprietary.

No, D-Star is not proprietary. It is an open standard.

>Wanna use D-Star? Get out the plastic and go
>without something else for a couple years.

Yes. Want a usable PSK31 HT? Go without something else for many years.

>I think that what would be needed is for local governments to do the
>actual purchasing, then hand it over to the Hams.

Wow.

>The Hams are going to
>have to have regular access to the D-Star repeater, or else they won't
>buy-in.

The hams are going to have to have a lot of MONEY to have regular access
to any D-Star repeater.

>My honest opinion however is that this is one of those technology
>solutions that just add too much technology to the mix. One of the big
>complaints from emergency responders is that they can't talk to each
>other. This is due to the introduction of too much structure upon the
>system.

This is due to licensing limitations that prevent LMR radios from being
fully and easily programmable in the field.

>With D Star, we do the same thing with Hams.

I know of no D-Star radio which is not fully field programmable.

>> I thought I'd like to buy an ID-1 when it came out. At $3000 (one for me,
>> one for someone to talk to) I said "no thanks".
>
>Yup. And the big problem as far as Amateurs go is that they can't get
>into the system.

I have no idea what you mean by this. What "system" can they not get into?

>Whereas you or I can build a CW, SSB, FM, or PSK31
>radio for most any application we'd like, we can't do that with D-Star.

So what? Most people cannot build even a CW transmitter, much less a PSK31 system. Have YOU built your own PC to run the PSK31 software yet? I doubt it.

>So unless those prices come waaaay down, D-Star is going to be a very
>low volume mode, probably used only by emergency groups. Of course if
>that is the case, they shouldn't be operating it on the Amateur bands,
>because they can get more use out of it on their own frequencies,

I'm sorry. Exactly what frequencies do ARES groups have that aren't part of the Amateur Radio Service? How do I legally put an amateur certificated repeater on to a public-service frequency?

>which won't have Amateur reestrictions.

Amateur restrictions are trivial compared to LMR. Nobody is demanding that we all cut our bandwidth and channel spacings in half by 2013, e.g.. Our licenses don't come with a list of specific frequencies we can use.

>deteriorated quite a bit.

Well, I have a few more years than you; and yes, Hara is getting
old, as we all are....

But there's nowhere anywhere nearby with the indoor+outdoor space
the Hamvention uses. If/when the Wampler family [ISTM that's their
name..] sells out to developers, the Hamvention may well be history...

Amateur Radio Newsline" Report 1606 - May 23, 2008

Amateur Radio Newsline report number 1606 with a release date of Friday, May 23rd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The Red Cross says lifestyle checks will no longer be required of ARES volunteers, hams in China continue their post earthquake lifesaving communications, Hollingsworth says he will retire this summer and Dayton 2008 is a fun success. Find out the details on Amateur Radio Newsline" report number 1606 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: THE RED CROSS SAYS NO MORE LIFESTYLE CHECKS ON HAM VOLUNTEERS

In a surprise move, the American Red Cross has acquiesced to the demands of the ham radio community and will no longer perform so-called lifestyle background checks on hams who want to provide communications to the relief agency. Khrystyne Keane, K1SFA, of the ARRL Letter says that the announcement came at a most apropos time and place:

--

Keane: "We had a big announcement yesterday in the ARES forum. The Red Cross has announced that it will no longer conduct as part of its background checks, mode of living checks or credit checks. And now, all that remains to be done is for the ARRL and the Red Cross to hammer out an MOU and get this thing going.

--

The MOU that K1SFA reefers to is the Memorandum of Understanding between the League and the Red Cross. A fancy term that really means an agreement where-in the ARRL and the American Red Cross agree to work together in those situations where volunteer ham radio communications are needed.

Such an agreement was in place for many years but the League was hesitant to renew it after members complained about background checks initiated back in 2006. Nobody minded criminal background checks but a lot of folks objected to the extent the Red Cross was going to. Its background checks included, among other things, a credit check and a mode of living check for its staff and volunteers. This included ARES volunteers providing services to the Red Cross during times of disasters.

The ARRL and a lot of hams not associated with the League considered the extent of the Red Cross background check as unneeded and inappropriate for communications volunteers. So in November 2007, ARRL President Joel Harrison, W5ZN, wrote to the American Red Cross regarding concerns voiced by the nations ham radio community.

But until a few weeks ago the American Red Cross was hanging tough and refusing to use hams who refused to permit the full background check program. That all changed on May 8th when Armond Mascelli, who is American Red Cross Vice President for Disaster Response Services finally replied to W5ZN with word that his organization had reconsidered its position. Mascelli's letter stated that the portion of the background checks that the ARRL and seemingly all of ham radio objected to had been eliminated. At least eliminated for communications volunteers involved through the ARRL-sponsored ARES program.

According to Mascelli, a new background consent form will be used by all Red Cross chapters for ARRL members and other partner organizations. The form and related process is limited to the name and social security number verification of the individual, and a criminal background check. References and suggestions to other related investigative possibilities have been stricken from the form. (ARRL, ARNewsline")

RESCUE RADIO: 40 AND 20 METERS BEING USED IN CHINA QUAKE RESCUE

According to news reports, China is in mourning for the estimated 50,000 people killed in the earthquake on May 12th and radio amateurs in that nation are still asking that three frequencies be kept clear for emergency rescue and relief operations

According to the Chinese Radio Sports Association 7.050 and 7.060 and 14.270 MHz. have been designated for use only by hams involved in emergency services and post quake in the rescue. Michael Chen, BD5RV, reports that a group of radio amateurs is transmitting on 14.270 MHz from Wenchuan. That's not far from the epicenter of quake. During one contact with BY8AA in Chengdu, messages were sent asking for raincoats, water, tents, and outdoor living facilities. BY8AA has also been helping many others with communication and during one week had an operational log in excess of 300 pages.

Meantime the Chinese Radio Sports Association has reported that long distance telephone services have been congested in the Chengdu area. This, presumably due to a heavy demand and damage.

Because of this it was asked to set up and man a High Frequency station in Chengdu. That station is currently on the air using the call BT8RC and is the dedicated channel for the Chinese Red Cross Foundation in Beijing to Chengdu providing communications to enable the relief agency to more effectively carry out its work.

Other cities in the earthquake area have setup or restored VHF and UHF repeaters and amateur radio communication teams to assist with communication.

The quake hit at about 06:30 UTC on Monday, May 12th. It registered at a magnitude 7.8 earthquake and was centered near Sichuan. In addition to those known to have perished, more than 245,000 were injured and at least 2 million are homeless.

Again the Chinese Radio Sports Association continues to request that hams world wide stay clear of 7.050, 7.060 and 14.270 MHz so that they can be used for emergency communications that can and will save lives. (CQ, QRZ.com, Southgate, others)

**

RESCUE RADIO: NO HAM RADIO IN MYANMAR TYPHOON

Meantime in Myanmar where tens of thousands of people were killed by a recent typhoon, CQ Public Service Editor Bob Josuweit, WA3PZO, passes on a report from G4HPE of the International Radio Emergency Support Coalition that there currently is no amateur radio relief activity taking place there. The UN has finally been permitted to set up both HF and VHF communications based in the capital city of Yangon. This is for use by the entire humanitarian community, but none of the frequencies in use are in the Amateur bands. (CQ)

**

RADIO LAW: FCC SAYS NO TO DIGITAL OPERATIONS PETITION

Back at home the FCC has dismissed a petition for rulemaking filed by Mark Miller, N5RFX, requesting amendment of the Commission's Amateur Radio Service rules. This, to revise the operating privileges for amateur radio service stations that transmit data emission types.

Specifically, the Petition requested that several Sections of the Amateur Service rules be amended to revise various definitions and frequency privileges. While Millers petition covered a number of issues regarding digital operations, the most controversial dealt with unattended digital operations on the High Frequency bands. And while Miller never named Winlink 2000 as the target of his petition, that's the way the FCC seemed to see it. And according to the FCC's Bill Cross, W3TN, speaking at last weeks Dayton Hamvention, there was an important reason for the denial of this portion of the Miller rules change request:

--

Cross: "Winlink as a communications system seems to have become the Brussels sprouts of ham radio: You either love it or you hate it. And trying to bury it under ketchup or hollandaise sauce hasn't changed the basic like or dislike for Winlink.

"Most of the controversy here seems to swirl around how certain licensees use it.

"Some use it for a radio e-mail system.

"Others use it for getting weather maps while they are on sailboats in places the brave dare not go.

"Others use it for their personal business activities, such as buying and selling stocks.

"These uses are really a Section 97.113, a 'prohibited communications' question, not a technology question. The rules apply to the Control Operator of the station transmitting the message, not the Winlink system.

"As we have said until we are blue in the face, in the Amateur Service we do not license or regulate systems. We license stations. And it is the station licensee that is responsible for the proper operation of the station.

"Its your callsign on the transmission. It is your responsibility."

--

In other words, whether a transmission is analog or digital really does not matter. What is important is that all hams obey the rules that the Commission has set out to guide the service. It also can be read as the FCC saying that it will not re-regulate a service that its worked very hard to free from burdensome regulations just to placate the needs, wants or claims of any one group of hams regarding another.

There more to be covered regarding the Miller petition and its being totally denied. Listen for it in future Amateur Radio Newsline reports. (ARNewsline - Dayton Hamvention FCC Forum)

THE YHOTY AWARD: NOMINATIONS CLOSE MAY 30

As of the release of this weeks newscast we have not received any valid nominations for this years Young Ham of the Year Award. Well, the nominating period for this years award ends at midnight on Friday May 30th. Due to the mechanics of preparing for the award presentation ceremony it is impossible to extend beyond that date. Any nomination received electronically after midnight May 30th or postmarked after midnight on May 30th will be deemed ineligible. And if no valid nominations are received by that cutoff date and time the award program for 2008 will be cancelled.

And when we say valid nomination we mean one for a youngster age 18 or younger who has made a major contribution in some way to the betterment of Amateur Radio. This can be through public service, technical development,

contributions to the state of communications sciences, recruitment of new hams or whatever seems to be an accomplishment worth honoring.

What is not acceptable are nominations that say something like .. "my 7 year old just passed his tech test so give him a radio."

And if you think that we do not get our share of these, guess again. About one in three nomination form we have received over the years reads something like that because people do not read the rules and think that the Young Ham of the Year Award is some form of contest or prize drawing. Its neither. Its an award program now trying to enter its 22nd year and aimed specifically way honoring the accomplishments of the younger members of ham radio society. As recipient, the person selected is given a free trip to the Huntsville Hamfest in August along with a piece of Yaesu brand ham radio gear from corporate underwriter Vertex Standard Corporation. He or she also gets to spend a week at Spacecamp Huntsville courtesy of corporate underwriter CQ Magazine.

The Young Ham of the Year Award is open to any ham age 18 or younger living in the 50 United States, plus Puerto Rico and all Canadian Provinces. A full set of rules along with a downloadable nominating form is on line at www.yhoty.org Just slick on the tab marked 2008 nominations and follow the instructions that say "Download the nominating form as a PDF by clicking here. Then, fill it out, attach the required substantiating material and mail it to Amateur Radio Newsline - YHOTY, 28197 Robin Avenue, Santa Clarita, California, 91350. Again that address is Amateur Radio Newsline - YHOTY, 28197 Robin Avenue, Santa Clarita, California, 91350.

If for some reason you cannot retrieve the form from the website, e-mail us to newsline (at) arnewsline (dot)org. Include your return e-mail and we will return a form to you electronically.

Once again, the cutoff for nominations for the 2008 Amateur Radio Newsline Young Ham of the Year Award is midnight on Friday, May 30th 2008. If we do not receive any valid nominations by that date the award program for this year will be cancelled.

The bottom line is that whether a worthy young ham is honored this year, or not, is literally up to you. (ARNewsline / YHOTY)

**

HAMVENTION 2008: ITS ALL OVER FOR ANOTHER YEAR

The 2008 Dayton Hamvention is over, but its left a lot of good memories and thankfully only one that's was good one with some attendees. The ones who will remember the bad are those who arrived early to set up Flea Market spaces only to find that a computer glitch would have them waiting in line. In some cases for several hours. Ron Moorefield, W8ILC, has been associated with the Hamvention since the very beginning. He says that this will be one of the items taken under advisement when the committee holds its critique of Hamvention 2008 in a few weeks:

--

Moorefield: "Well, we will have our critique early next month and from there we are going to hold a meeting every month and get this going. The word is that we are going to get a lot of things going way ahead of time in October."

--

Moorefield says that moving things up a few months should insure enough time to cure problems early on so that they do not become last minute headaches.

The good news is that with this one exception it was a show that everyone seemed to really enjoy. This includes Ray Arndt, SM5LBR, who flew over from Sweden. Ray writes for several European amateur radio magazines. He says that those who showed up were ready to deal:

--

Arndt: "I've talked to a couple of dealers here and (other) people. They are all very satisfied and they all say the same thing. (That is) the people who came here really bought. The people who normally came here and do not buy, they stayed at home this time. So, obviously it was very positive."

--

Arndt did note that it was not a big year for the introduction of new high end gear. Definitely not like it was just a year ago:

--

Arndt: "You know: Last year was absolutely exciting. There were so many new things that I couldn't actually cover everything. Every large company had something new out. This year you really have got to look around to find a few new things.

"This in the middle. A sort of in-between year because they cannot bring out expensive new radios. There were some new things out here but it was a more normal year, I would say."

--

As to the size of the crowd? Some say it was about the same as last year. Others say it was definitely a smaller group and blamed the near $4 dollar a gallon for gasoline as the reason folks may have stayed away. Ron Moorefield tends to disagree:

--

Moorefield: "I think that the weather was perfect. This brought people out who were feeling possibly with rain, they would not come.

"The gas prices as they were, really surprised me. Yet I believe that if people really want to come to the Dayton Hamvention, that they will be here

no matter what the economics are. We had a good weekend."

--

Moorefield may be correct. According to Ray Arndt, gas prices in the United states are still a bargain as compared to what radio amateurs shell out to drive to a hamfest in Europe:

--

Arndt: "We have now (in Europe) $7 to $8 a U.S. gallon. But that's a higher octane at 95.

"I recently saw an article in a newspaper in Sweden that Sweden is trying to go to the forefront of being environmental. It says that if we meet the constraints that Sweden has taken in the European Union, then in 2020 a gallon will be up at $20.

--

Bottom line, it's a lot more expensive to hit a hamfest there than it is here in the USA.

And no Dayton Hamvention would be complete without the views of a sales representative and DX'er who has attended a lot of them. Of coarse we are talking about Chip Margelli, K7JA, who now is with Heil Sound Limited. Chip says from behind the sales counter, this was truly a banner year:

--

Margelli" "Boy, what a great Dayton. The weather turned out to be much better than we expected it to be. It was moderately cool with partly cloudy skies.

"Business was brisk. We had our best year ever at Heil Sound. It was a very up-beat crowd this year. We didn't know what to expect with sunspots down but the crowd was very up-beat and interested in getting new technology into their ham stations.

"We just think it was a great weekend in Dayton, Ohio."

--

Lots more happened at Hamvention 2008 and we will continue our coverage next week. (ARNewsline")

**

NAMES IN THE NEWS: RILEY HOLLINGSWORTH TO RETIRE IN JULY

According to ARRL, Riley Hollingsworth, K4ZDH, who is Special Counsel in the FCC Spectrum Enforcement Division plans to retire on July 3rd. Hollingsworth reportedly told the ARRL that his to head out in July, assuming the results of the second round of the PAVE PAWS 440 repeater monitoring in California present no complications.

Hollingsworth is quoted as saying that it has been a privilege to work with and for the Amateur Radio licensees and the land mobile frequency coordinators. He says that he was extremely fortunate to work for two wonderful groups of people referring to those at FCC headquarters in the Enforcement Bureau, and for those holding licensees in amateur radio.

As previously reported, Hollingsworth had planned to retire earlier this year, but changed his mind. At that time he said that there were several issues on the table that he wanted to continue to work through with the amateur community.

A full report on Hollingsworth's pending retirement can be found on the ARRL news pages at www.arrl.org. (ARRL, Handi Hams, others)

**

NAMES IN THE NEWS: K5ZD NAMED DIRECTOR OF CQ WPX CONTESTS

Contesting luminary Randy Thompson, K5ZD, has been named Director of the CQ World Wide WPX Contests, effective immediately. Thompson succeeds Steve Merchant, K6AW, who has been WPX Contest Director since 2002 and who needed to step aside due to business obligations.

Randy Thompson has been a contester for more than three decades and has multiple wins to his credit in the single-op, all-band categories of both the CQ World Wide DX Contest and the CQ WPX Contest, in both CW and SSB modes. He is also a past editor of the "National Contest Journal" and a co-founder of the eHam.net website. He is a longtime member of the Yankee Clipper Contest Club and an instructor at K3LR's Contest University. In the past year, Randy has been working with Steve Merchant behind the scenes on the WPX contests, so he is already familiar with the program from the administrative side. (CQ)

**

NAMES IN THE NEWS: CQ ANNOUNCES INDUCTEES TO ITS HALLS OF FAME

CQ magazine has announced its 2008 Hall of Fame inductees, welcoming 14 new members into the CQ Amateur Radio Hall of Fame, three new members of the CQ DX Hall of Fame and two new members of the CQ Contest Hall of Fame.

The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or not, who have made significant contributions to amateur radio. Also honored are those amateurs who have made significant contributions either to amateur radio, to their professional careers or to some other aspect of life on our planet.

For a complete list of this years inductees please visit the news pages at www.cq-amateur-radio.com. (CQ)

ENFORCEMENT: SF CB-ER'S FINED FOR OUT OF BAND OPERATION

Turning to enforcement news, Citizen Radio operators Martha S. and Miguel G. Campos, San Jose, California have been fined $800. This, for operating a modified CB radio station on a frequency not authorized for this use. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

In a May 21st release the FCC says that back on April 7, 2006, the Enforcement Bureau's San Francisco Office received a complaint alleging intentional interference to CB radio communications on 27.055 MHz. The complaints alleged that the source of the interference was located at the residence of CB radio operators, Martha and Miguel Campos in San Jose.

On August 24, 2006, after subsequent complaints, the San Francisco Field Office issued a Warning Letter to Miguel Campos. The letter informed him that, pursuant to Section 95 of the Commission's Rules he must operate his CB station only on the 40 channels allocated to the CB service. Mr. Campos was also warned that if the transmissions continue, and if an investigation indicated that he had violated the Communications Act or any FCC Rules, he could be subject to severe penalties, including substantial monetary forfeitures. On August 31, 2006, Mr. Campos replied to the letter acknowledging that he was a CB operator and detailing the CB equipment that he used.

On September 29, 2006, in response to continued complaints, the San Francisco Office issued a similar Warning Letter to Martha S. Campos. On October 27, 2006, Martha and Miguel Campos came to the San Francisco Office to discuss the warning letters they had received. A San Francisco agent clarified some of the CB Rules to them and again warned them about the consequences of not following them. None-the-less, during the period of November 2, 2006, to February 2, 2007, the San Francisco Office continued to receive complaints alleging interference by the Campos. So on March 16, 2007, San Francisco agents, using mobile direction finding techniques, located the source of the alleged interfering signal on 27.675 MHz to the Campos' residence in San Jose,. The agents also conducted an inspection of the Campos' CB station. By conducting on/off tests, the agents confirmed that one of the transmitters had been modified to operate on frequency 27.675 MHz. This is a frequency that is not authorized for use by CB stations. The agents further determined that the transmitter set up in the Campos' residence was capable of operating in excess of the four-watt power limitations.

From April 10, 2007, to September 10, 2007, the San Francisco Office continued to receive complaints alleging interference by the Campos. On

October 31, 2007, the San Francisco Office issued a Notice of Apparent Liability or NAL in the amount of $10,000 to the Campos. It charged that they had apparently willfully violated Section 301 of the Communications Act by operating a modified CB radio station on a frequency not authorized for Citizens Band radio use.

On January 16, 2008, the Campos filed a response claiming that they did not have the ability to pay the forfeiture. They also argued that did not comprehend the severity of the situation, in part because they were not able to read English. However, from the earlier meeting with the FCC it was obvious to the Commission that Miguel Campos was able to understand English in spoken form. Because of this, that part of the Campos defense was disallowed.

However, to support this claim that they could not afford to pay the $10,000 the FCC was trying to assess, Mr. And Mrs. Campos supplied tax returns for the three years prior to the N-A-L being issued. In analyzing this financial hardship claim, the FCC reviewed the data supplied by the Campos. In the end the FCC concluded the claim to be valid and that reduction of the forfeiture from $10,000 to $800 is warranted.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The Campos' were given the customary 30 days to pay the fine or to file a further appeal. (FCC)

D-STAR NEWS: WY1U SAYS TO NOT USE CLONED D-STAR INFO SITE

Tim Mik, WY1U, says over the D-Star re-mailer that the D-Star Search Page that he created and updates daily has been copied. This, without his approval by another group or individual in the United Kingdom who has placed it on the World-Wide-Web using its own URL.

Tim says that the U-K site was not given permission to copy his page. He says that he has asked the owners to place a link to the original page instead, but they have ignored his request to do so. So Tim is instead asking all D-Star user to ignore the U-K based clone and come directly to his website for the latest D-Star operational information. It's a simple URL at www.dstarsearch.org. (D-Star Reflector)

**

EMERGING TECHNOLOGY: A POSSIBLE ROBOTIC THREAT TO 70 CM

Howard Gordon, W3CQH, reports over the VHF Reflector on a Public notice posted by the FCC. This, on a proposal to use 430 to 448 MHz for remotely-controlled surveillance robots for emergency use.

Gordon says that for the power proposed and the limited use, Ithat he does not believe the device will cause any significant interference to the

amateur radio service. But he says that the real issue for the manufacture is how to stop the hams from interfering with the surveillance device.

W3CQH says that the possible threat to ham radio may be that once the manufacturer has its foot in the door on 440mhz, it could conceivably start petitioning the FCC for channelization to be done and assigned to it citing interference problems that have occurred in some future alleged emergency situations.

You can read the full FCC release on this robot device at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1077A1.pdf (W3CQH via VHF Reflector)

**

PROPAGATION REPORT: SOLAR CYCLE DELAYED A YEAR

The next 11-year cycle of solar storms will most likely start next March and peak in late 2011 or mid-2012. That's up to a year later than expected according to a forecast issued today by NOAA's Space Environment Center in coordination with an international panel of solar experts. (NOAA, QRZ.COM)

**

DX

In D-X, word that DF1LON is going to spend his holidays on Jersey Island. He will be there through May 28th but his main activity will be as MJZ0LON in the upcoming WPX CW Contest. He will work both CW and SSB before and after the WPX. QSLs via DF1LON, direct or via the bureau.

And listen out for LA5LJA, and LA7FJA, will be on from Svalbard using CW, SSB and some digital modes on all the H-F bands. They will be signing the calls JW5LJA and JW7FJA from May 25th to June 1st. QSLs to their home calls via the bureau.

Lastly, JA1XGI has announced he will operate from East Kribati as T32XG from May 27th through June 3rd. He plans to use CW, SSB and some digital modes on 40 through 15 meters. QSL his operation to his home call, either direct or via the bureau.

(Above from various DX news sources.)

**

THAT FINAL ITEM: WELCOME TO A NEW EXTRA

And finally this week we return to the Dayton Hamvention for an important moment of a young ham. Meet Tiffini Ravitch, KC2TFO, of New Jersey. She had come to Hamvention in the hope of going home with a General class license. Instead she went home with the top of the line as an Extra. Here's her story as she told it to our Producer Bill Pasternak, WA6ITF and ham radio educator Gordon West, WB6NOA:

--

Audio only: Please download the mp3 audio version of this newscast at www.arnewsline.org

--

And from all of us at the Amateur Radio Newsline congratulations we also say congratulations to Tiffini Ravitch, KC2TFO, on getting her Extra to take home as a lasting momento of Hamvention 2008. Needless to say we could use a lot more like her in the hobby.

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline". Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's" only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline", P.O. Box 660937, Arcadia, California 91066.

Before we go, another reminder that the nominating period for the 2008 Amateur Radio Newsline Young Ham of the Year Award ends at midnight on May 30th. Nominations postmarked after that time or received electronically after that time will not be considered. A nominating form as a dot pdf file is available at our special Young Ham of the Year website at www.yhoty.org. Download it, fill it out and send it to us by US mail or electronically.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

I respectfully disagree:

http://en.wikipedia.org/wiki/D-STAR

to quote the relevant part:

"D-STAR has been criticized for its use of a patented, closed-source proprietary voice codec (AMBE). [4] Hams do not have access to the detailed specification of this codec or the rights to implement it on their own without buying a licensed product. Hams have a long tradition of building, improving upon and experimenting with their own radio designs. The modern digital age equivalent of this would be designing and/or implementing codecs in software. Critics say the proprietary nature of AMBE and its availability only in hardware form (as ICs) discourages innovation."

end quote

> Wow.

Understood. I'll skip most of the post because I'm not looking for a sentence by sentence rebuke here. Let's just take it that you don't like my ideas, and we'll move on.

My thoughts are that having some sort of device that young people can use to communicate with each other, in a manner such are they are used to, such as texting, might just be a good thing. Add a couple more friends, and you have a VHF chat room. No need for repeaters, no need to intrude on other people's BW. The idea isn't to forge some new technology. Too many people get caught up in that. It is an application of available technology in a way that some folk might not see as useful, but others might.

==> AMERICAN RED CROSS RESPONDS TO ARRL CONCERNS REGARDING BACKGROUND CHECKS

At the ARRL ARES forum at the Dayton Hamvention, ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, announced that the American Red Cross (ARC) has finally moved to the issue of background checks for ARES volunteers.

In November 2007, ARRL President Joel Harrison, W5ZN, wrote to the American Red Cross (ARC) regarding concerns voiced by ARRL volunteers.

In 2006, the Red Cross stated it would implement background checks that included, among other things, a credit check and a "mode of living" check for its staff and volunteers, including ARES volunteers providing services to the Red Cross during disasters. ARRL saw these portions of the background check as unneeded and inappropriate for ARES service.

In a letter dated May 8 of this year, Armond T. Mascelli, ARC Vice President for Disaster Response Services replied to President Harrison: "I can now report back to you that [these] actions have been completed and changes have been instituted which I trust resolves the concerns detailed in your letter. This effort took considerably more time and attention than originally envisioned, but I believe the results will now benefit our respective organizations.

"A new background consent form now [is] to be used by all Red Cross chapters for ARRL members and other partner organizations. The form and related process is limited to the name and social security number verification of the individual, and a criminal background check. References and suggestions to other related investigative possibilities have been stricken."

Harrison said that "We are very pleased that the American Red Cross has addressed some of the issues that we raised regarding their background investigations and that we can move forward in a relationship that has existed for a long, long time. The American Red Cross and the ARRL have shared a productive relationship for many years which has been of benefit to both the organizations and to the public. We are glad that throughout the past months we have been able to negotiate the issues that we had and have finally come to a resolution."

With the background check issue apparently resolved, the ARRL will be working with the ARC in the negotiation and creation of a draft for a new "Memorandum of Understanding" (MOU) or similar document to replace the one which expired last year; Dura and Keith Robertory of the ARC will be leading the effort. When complete, the draft of the MOU will be presented to the leadership of both organizations for approval.

"While we believe that the Red Cross is implementing some changes that will address some of the concerns expressed to them by ARRL, at this point, it is work in process," said ARRL Chief Operating Officer Harold Kramer, WJ1B. "There are many questions yet to be answered, but we believe that the Red Cross is progressing in good faith to complete the changes to their policy and their background check consent form, which was the primary concern expressed to the Red Cross by ARRL. There will be more clarifications and information in the near future. Please keep an eye on the ARRL Web site for updates as we know them. We are very much aware of your concerns and have conveyed them to the Red Cross. We expect the Red Cross to address these and other concerns on subject of their background check policy in the near future."

"The ARRL is very pleased that the American Red Cross has responded appropriately to our concerns about the background check issue," said

ARRL Chief Executive Officer David Sumner, K1ZZ. "We believe it now will be possible to go forward to negotiate a statement of understanding between the two organizations. We look forward to renewing and expanding the relationship with the Red Cross."

Dura warns that when requesting a background check on the ARC Web site, volunteers from partner agencies, such as the ARRL or ARES, should select "I am an ARC partner" when asked "What is my Red Cross role?" Otherwise, he says, volunteers will see the background check form that asks for "everything."

==> FCC'S BILL CROSS, W3TN, CALLS HAM RADIO "BELOW THE RADAR"

William Cross, W3TN, a staff member in the FCC's Wireless Telecommunications Bureau, and Riley Hollingsworth, Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau, spoke at the FCC Forum on Saturday afternoon at the 2008 Dayton Hamvention. Cross opened by explaining just where Amateur Radio falls in the FCC's bureaucracy.

"The Mobility Division of Wireless Telecommunications Bureau has the oversight of the Amateur Radio Service," Cross said. "We handle the day-to-day administration of the Amateur Service and some of the rulemaking activities that affect the Amateur Radio Service. The Gettysburg office handles applications, licensing -- including vanity calls -- and the ULS. Within the Commission, other bureaus also make rules that affect you. The Office of Engineering and Technology handles spectrum allocations and equipment issues. Our Managing Director's Office is the office that handles matters relating to fees, such as the fees relating to vanity call signs, Debt Collection Improvement Act matters, the need for Federal Registration Numbers."

Cross divided comments into two areas: Proceedings where the Commission has issued a decision and rulemaking requests that have been filed with the FCC, but which are pending resolution by the Commission.

Calling the past year "interesting, because it has been a quiet year on the regulatory front," he said that no big rulemaking items were released. "This being an election year, there doesn't seem to be any legislation on Capitol Hill that is of direct interest or impact on the Amateur Service. This year is a good time for Amateur Radio to be flying 'below the radar,' and that's where ham radio is right now in terms of the big picture -- below the radar," Cross said. "We wrapped up a couple of Petitions for Rulemaking [PRM] that were pending and it doesn't look like (at least in the near future) there will be anything else coming out."

One of the cases the FCC issued a decision on was what Cross referred to as the Miller Order. This Order, released May 7, dismissed a PRM from Mark Miller, N5RFX. Miller sought three points: To delete the FCC's 2006 addition to how it defines data, to amend the rules to prohibit automatically controlled stations from transmitting on frequency

segments other than those specified in Section 97.221(b), and to replace the symbol rate limits in Section 97.307(f) with bandwidth limitations.

"The effect of these changes," Cross explained, "when taken together, would have been, as [Miller] said, 'A small number of wider bandwidth modes, including Pactor III, would no longer be authorized.' Translating that into English, what he was asking for was 'bye-bye Winlink.' Don't get me wrong -- Winlink as a communications system seems to have become the 'Brussels sprouts of ham radio' -- you either love it or you hate it. And trying to bury it under ketchup or hollandaise sauce hasn't changed the basic like or dislike for Winlink. Most of the controversy here seems to swirl around how certain licensees use it. Some use it for a radio e-mail system. Others use it for getting weather maps while they are on sailboats in places the brave dare not go. Others use it for their personal business activities, such as buying and selling stocks. These uses are really a Section 97.113, a 'prohibited communications' question, not a technology question."

Cross mentioned that there are "some things coming down the pike that you want to keep track of. The ARRL has a pending petition -- RM 11325 -- that requests that we amend the rules that apply to the power stations may use when transmitting spread-spectrum emissions -- BPL. The DC Circuit Court of Appeals remanded the FCC's final BPL rules. The Court did not vacate the rules, so they are still in effect. There will be another proceeding to address what the Court told the Commission it had to address."

The Northern California Packet Association has filed a request for clarification that the FCC define what is meant by the term "simultaneously" as it is used when defining a repeater. "The issue here is that in California," Cross explained, "D-STAR repeaters have been coordinated on channels that are set aside for auxiliary stations, on the basis that, because there is a delay in retransmission of the signal, the retransmission is not simultaneous, and therefore the repeating station is not a repeater." Cross said others have advanced what he calls "the duck argument: If the station looks like a repeater, if it functions like a repeater, and it sounds like a repeater, it should be treated as a repeater -- and confined to the repeater subbands. A decision on this will be coming [from the Commission] shortly."

When Hollingsworth stepped up to the podium, he spoke about what he called "the magic of radio," saying, "we need to realize the debt we owe to those who work so hard to further the goals of Amateur Radio, whether it's the Emergency Communications participants, club members, teachers, VEs, the League. One of the richest rewards in doing something is to experience joy in doing it. And with so many people working so hard on their own time to further the goals of Amateur Radio, we're all a little more free to enjoy radio and to make it fun as well as a public service."

Saying that "things have calmed down a lot in the Amateur Radio Service," Hollingsworth explained, "[that] when it comes to the Amateur Radio Service, there's one enforcement tool we need very badly and we just don't have it -- and that's straitjackets," he deadpanned, eliciting guffaws from the crowd of more than 150 people. "Some days I want to ask, 'Why can't everybody just get along?'"

Hollingsworth noted that since the 75 and 80 meter phone band has been expanded, "a lot of these regular small groups, ragchews and some of the Nets should consider "spreading out, because a lot of the regular operations every night are clumped together. Yes, there are still interference issues and interference allegations, but if everybody would spread out a little bit, now, it's going to take a real change of habit by a group that has used the same frequency for 40 years to talk across the state, but you really need to spread out and take advantage [of the band] expansion."

He also noted that interest in Morse code "seems to be higher than ever before." On the enforcement side, Hollingsworth said he has noticed "no difference in enforcement problems related to no-code, and I think I'm seeing more young people at events that I go to." He reminded audience that only 1 percent of Amateur Radio licensees filed comments in the Morse code Proceeding. "I see the new code keys for sale here, and I always see a big crowd of people around anything related to code or code keyers. I think the interest has really peaked."

Hollingsworth pointed out a 12 year old boy who sat in the front row. When asked, the boy responded he received his license three years ago when he was 9. "The future President of the League might be sitting right there," Hollingsworth explained, pointing at the boy. "That's our future, right there, and we're depending on you. We need a lot more young people and I think that Morse code seems to interest young people -- hopefully they're getting tired of instant messengers and the Internet. Last night someone told me about a 14 year old Net Control Operator on a national Net."

Calling for "more courtesy" on the Amateur Radio bands, Hollingsworth said, "This fighting amongst yourselves is the worst thing that you can do. You have some rude operators and operators who don't care and who are hateful and bitter about life in general, but every group has that, whether it's doctors, electricians, lawyers, plumbers, whatever, every group has a certain percentage of people like that. What you have to do is to remind yourself every day to stay on the high road and report to us if you can't resolve a problem after you've given it a chance to go away. There are plenty of ugly situations in the world and you don't have to add to them. Now, there are a few idiots in your Service who know all the answers, only because they haven't thought of all the questions. They just want recognition and reaction. Don't give it to them. Don't be baited. Don't feel insulted -- they are their own worst punishment. Don't dignify them with a response."

Hollingsworth implored the audience to "never let the Commission get by again with handing you 10 to 12 years of neglect. You have to stay

vigilant. Even though the bands may sound better to you, you have to be vigilant to protect your Service, and be part of the solution -- not the problem -- and operate as if the whole world is listening, because generally it is."

You can listen to the FCC Forum in its entirety on the ARRL Web site <http://www.arrl.org/news/images/nms/other/FCCForumMP3.mp3>.

==> NEW SECTION MANAGERS TO TAKE OFFICE JULY 1

In the only contested Section Manager race this spring, Paul Eakin, KJ4G, was elected as the ARRL Northern Florida Section Manager with 430 votes. Dale Sewell, W4NBF, received 385 votes, and Carl Zelich, AA4MI, received 370 votes. Ballots were counted May 20 at ARRL Headquarters.

Eakin's two-year term begins on July 1; he will be stepping into the office that has been held by Rudy Hubbard, WA4PUP, since 1990. Hubbard has served nine continuous terms of office. A Life Member of ARRL, Eakin is from the Tallahassee area and he has been a licensed radio amateur since 1969. He has a strong background in Emergency Communications and many years of emergency service experience.

The ARRL Northern New Jersey Section is getting a new Section Manager starting on July 1, as well: Richard Krohn, N2SMV, of Manalapan, will be taking over the reins from Bill Hudzik, W2UDT, who has served as Section Manager since 2001.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for the next two year terms of office beginning July 1: Tom Ciciora, KA9QPN (Illinois); Bill Woodhead, N1KAT (Maine); Bonnie Altus, AB7ZQ (Oregon); Bill Dale, N2RHV (Santa Clara Valley); Paul Gayet, AA1SU (Vermont), and Don Michalski, W9IXG (Wisconsin).

Nominations for the Indiana Section Manager position will be resolicited in July QST for an 18-month term of office beginning in January 2009.

==> CQ ANNOUNCES 2008 HALL OF FAME INDUCTEES

Just before Hamvention weekend, CQ magazine announced its 2008 Hall of Fame inductees, welcoming 14 new members into the CQ Amateur Radio Hall of Fame, three new members of the CQ DX Hall of Fame and two new members of the CQ Contest Hall of Fame. The CQ Amateur Radio Hall of Fame honors those individuals, whether licensed hams or not, who have made significant contributions to Amateur Radio; and those amateurs who have made significant contributions either to Amateur Radio, to their professional careers or to some other aspect of life on our planet. The CQ Contest and DX Halls of Fame honor those amateurs who not only excel in personal performance in these major areas of Amateur Radio but who also "give back" to Amateur Radio in outstanding ways.

The 2008 inductees to the CQ Amateur Radio Hall of Fame (listed alphabetically) are:

Gaston Bertels, ON4WF -- Honorary President, former President and CEO, UBA (Belgian IARU Member-Society); Founder & President, AMSAT Belgium; Chairman, ARISS Europe.

L. B. Cebik, W4RNL (SK) -- Noted antenna authority, prolific author on topics relating to antennas and antenna modeling. One of Cebik's last articles for QST, "A New Spin on the Big Wheel," appeared in the March 2008 issue. The article, co-written with Bob Cerreto, WA1FXT, looked at a three dipole array for 2 meters. This was a follow-up to their article in the January/February issue of QEX that featured omnidirectional horizontally polarized antennas. Cebik authored the "Antenna Options" column for QEX. Cebik, an ARRL Life Member, passed away last month at age 68.

Gordon England, ex-W3AWO -- Deputy Secretary of Defense; former Secretary of the Navy; former defense industry executive.

Admiral Edmund Giambastiani, N4OC -- Retired Vice Chairman, Joint Chiefs of Staff.

Gerald Griffin, MD, K6MD -- Brigadier General, Medical Corps, US Army (Retired). Led medical brigades and humanitarian missions in various combat zones; delegate to NATO medical advisory committee

Larnelle Harris, WD4LZC -- Multi-award-winning gospel singer/songwriter.

Lenore Jensen, W6NAZ (SK) -- Co-Founder, Young Ladies' Radio League (YLRL). Jensen wrote articles for QST, such as "Ask Not What Amateur Radio Can Do for You" (September 1978) and "California Hams Assist During Mud/Flood Crisis" (June 1980). During the 1930s, she acted in the radio drama Ma Perkins and later starred with McDonald Carey in the Lock Up TV series. Jenson was featured on This Is Your Life for her important contributions during World War II. After Pearl Harbor, she founded radio training courses for the American Women's Voluntary Service (AWVS), specializing in phone patches between servicemen overseas and their families, running more than 50,000 phone patches during the Vietnam War. Jensen's stepdaughter, Cynthia Wall, KA7ITT, wrote several ham radio-related adventure books for young people that were published by the ARRL.

John Kanzius, K3TUP -- Inventor of possible cure for cancer using RF energy; process for possible use of seawater as fuel. Kanzius's work was featured in the February 2008 issue of QST.

Charles (Chip) Margelli, K7JA -- DXer and DXpeditioner; in 2005, successfully represented hams in Morse code vs text-messaging competition on The Tonight Show with Jay Leno. He has written several articles for QST since 1973, including "Field Day 2003 from Cuba" in the December 2003 issue. In his capacity as Vice President for Amateur Sales and Marketing for Heil Sound, Margelli arranged the donation of equipment to The Laird Campbell Memorial HQ Operators Club station, W1HQ.

Philip S. Rand, W1DBM (SK) -- TVI pioneer; author, Television Interference. Rand was an electronics engineer for the Remington-Rand Corporation in the late 1940s, when Amateur Radio faced a crisis in the form of interference to the early VHF television sets. Rand worked with the ARRL to develop TVI suppression techniques for channels two through six. ARRL's then-Technical Editor George Grammer, W1DF, designed high pass filters for the primitive TV sets, while Rand developed new methods of shielding for amateur transmitters. Rand published articles in QST Magazine spanning 50 years, from "A Shack on Wheels" in 1933 to "The Beeper, An Audible Frequency Readout for The Blind Amateur" in September 1983. Rand served as ARRL New England Division Director in 1955 and 1956.

Vice Admiral Scott Redd (Retired), K0DQ/A92Q -- Former Director, National Counterterrorism Center; Retired Commander, US Fifth Fleet; active contester and DXer.

Tony Tether, PhD, K2TGE -- Director, Defense Advanced Research Projects Agency (DARPA)

Dr Hamadoun I. Toure, HB9EHT -- Secretary-General, International Telecommunication Union (ITU). Dr Toure received his Amateur Radio license in October 2007. An interview with Dr Toure appears in the May 2008 issue of QST.

John Townsend, PhD, W3PRB -- Space program pioneer, aerospace industry executive.

The 2008 inductees to the CQ DX Hall of Fame are:

John Devoldere, ON4UN, who more or less single-handedly popularized DXing on 80 meters. His book, Low Band DXing, the last several editions of which have been published by the ARRL, is considered the "bible" for DXing on these bands, with more than 50,000 copies sold. In 1979, Devoldere was the first ham to earn CQ's 5-Band Worked All Zones (5BWAZ) award; he holds 80 meter DXCC Certificate #1 and currently has 357 countries confirmed on that band.

Nellie Saltiel de Lazard, XE1CI, a pediatrician and DXer/DXpeditioner, has earned just about every major DXing award. She has operated from more than a dozen different countries, including being the first female to operate from Palestine (E4).

Bob Schenck, N2OO, has made his greatest contribution to DXing behind the scenes as QSL manager for more than 100 DX stations as well as more than 130 DXpeditions. Schenck is founder of the QSL Manager's Society.

The 2008 inductees to the CQ Contest Hall of Fame are:

Paolo Cortese, I2UIY, has too many Top 10 finishes to list. Off the air, he served for more than a decade as the HF Contest Manager for Associazione Radioamatori Italiani, Italy's national Amateur Radio association and IARU Member-Society. Cortese wrote a book on contesting and has been a member of the CQWW Contest Committee since 1990,

co-director of the CQ WW RTTY DX Contest and CQ WPX RTTY Contest since 2005. He has also written articles for QST and NCJ.

Randy Thompson, K5ZD, has multiple wins in the CQ World Wide DX Contest, ARRL Sweepstakes, CQ WPX (CW and SSB), CQ 160 and the IARU HF Championship. His station has also hosted many #1 performances by guest operators. Thompson is three-time editor of the National Contest Journal (NCJ) and co-founder of the eham.net Web site. He has just been named Director of the CQ WPX Contests. Thompson is a member of the Yankee Clipper Contest Club (YCCC).

==> FCC'S HOLLINGSWORTH SET TO RETIRE IN JULY

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth has announced plans to retire from the FCC later this year. "My intention," Hollingsworth told the ARRL, "is to head out in July, assuming the results of the second round of the PAVE PAWS/440 repeater monitoring in California present no complications. It has been a privilege to work with and for the Amateur Radio licensees and the land mobile frequency coordinators. I am extremely fortunate to work for two wonderful groups of people: Those at headquarters in the Enforcement Bureau, and for the Amateur Radio operators." Hollingsworth had planned to retire earlier this year, but changed his mind, saying, "There [were] several issues on the table that I want[ed] to continue to work through with the amateur community."

While his successor has not been named, he was quick to point out that the FCC's Amateur Radio enforcement program will continue.

Hollingsworth said he considered it an honor to have given something back to "the incredible enjoyment and benefits that Amateur Radio has given me since age 13. And to every one of the thousands of you that thanked us for our work, many of whom waited for long periods after a forum or radio meeting just to come up and express appreciation for what the FCC was doing in enforcement, you have no idea how much that was appreciated every single time. It sure wasn't a 9 to 5 job, but it was a gift and a daily joy to work for the best group of people on earth. The only bad day in nearly 10 years was September 21, 2001, when we lost Steve Linn, N4CAK. We still miss him." Linn, deputy chief of the Licensing and Technical Analysis Branch for private wireless within the Wireless Telecommunications Bureau, and his wife Lesley were killed in a car accident on their way to the Virginia Beach hamfest.

Hollingsworth told the ARRL he was "so very impressed" with the young people who are involved with Amateur Radio: "To the very young Amateur Radio operators I met at Dayton, who have dreams of being scientists and astronauts and communications engineers, we will be pulling for you; I have a strong feeling we won't be disappointed."

"The Amateur Radio Service is part of the American heritage, and I am going to stay as actively involved in it as I possibly can," Hollingsworth explained. "Thank you all for working tirelessly to

provide the only fail safe communications system on Earth and for helping this country keep its lead in science and technology. What an incredible gift it has been to work with you every day, and how fortunate we are to love the magic of radio!"

==> FCC POSTS AMATEUR RADIO ENFORCEMENT CORRESPONDENCE

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Thomas A. Nichols, WA6BKR, of Fairfield, California -- a General class licensee - reminded Nichols that on February 28, 2008, the FCC notified him once before, "the Enforcement Bureau indicated that in September 2004 and on various dates since October 2007 you operated on frequencies assigned to Extra class licensees but prohibited to General class licensees."

According to the Warning Notice, Nichols replied to Hollingsworth's February letter, conceding "an instance in which you operated in the Extra Class portion of the band and gave numerous reasons and comments on the Morse code exam, Amateur Radio in general, the Extra Class examination and other radio and kit building topics not relevant to your out-of-band operation."

Hollingsworth warned Nichols that "any additional out-of-band operation may lead to revocation of your license or a monetary forfeiture." Nicholls was also warned that his license would not be renewed or upgraded "until such matter is resolved."

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "Born of Sun and shower" Cook, K7RA, this week reports: This week several new sunspots appeared for five days, but they were all leftover spots from Solar Cycle 23, not new Cycle 24 spots. But this is okay, because at the sunspot minimum we appreciate any spots we can get. May 16-20 saw daily sunspot numbers of 34, 23, 30, 28 and 23. Sunspot numbers for May 15- 21 were 0, 34, 23, 30, 28, 23 and 0 with a mean of 19.7. The 10.7 cm flux was 71.1, 71.6, 71.2, 71.6, 68.9, 68.6 and 69.1 with a mean of 70.3. Estimated planetary A indices were 4, 4, 2, 3, 8, 10 and 13 with a mean of 6.3. Estimated mid-latitude A indices were 2, 3, 1, 2, 5, 7 and 9, with a mean of 4.1. Keep in mind that a sunspot number of 34 does not mean there were 34 sunspots last Friday. Instead, the numbers represent a somewhat arcane calculation that accounts for the number of sunspot groups and the size of each group. The count gets 10 points for each sunspot group and one point for each spot within the groups, the designation of these different areas within the groups seeming somewhat arbitrary to a layman such as myself. So 34 could mean that there are three darkened areas, with one of them counting as two spots, the other two just one each. Presumably, the same number would describe the Sun with two darkened areas facing Earth, and each counting

for seven spots. Thirty plus four is the same as 20 plus 14, but this week there were three areas. Expect quiet geomagnetic conditions and another prediction for a planetary A index of 25 just before the start of summer on June 17. Geophysical Institute Prague calls for unsettled conditions May 23-24, quiet to unsettled May 25, quiet May 26, quiet to unsettled again on May 27-28 and unsettled for May 29. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is VK/Trans-Tasman 80 Meter Contest (CW) on May 24. The CQ WW WPX Contest (CW) is May 24-25. The MI QRP Memorial Day CW Sprint is May 27. The MI QRP Memorial Day CW Sprint is May 26-27. The ARCI Hootowl Sprint is May 27 (local time) and the SKCC Sprint is May 28. Next weekend is ARRL Kids Day on May 31-June 1. The RSGB 80 Meter Club Championship (Data) is June 2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 8, 2008, for these online course sessions beginning on Friday, June 20, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Chinese Olympic Special Event Stations Are On-the-Air: Special Event stations for the 2008 Beijing Olympic Games began operating May 18,

running through Wednesday, September 17. Five special calls, representing the five rings of the Olympic flag, will be on the air: BT1OB, BT1OJ, BT1OH, BT1OY and BT1ON. The last letter of the call sign corresponds to the color of each of the rings of the Olympic flag -- Beibei (Blue), Jingjing (Black), Huanhuan (Red), Yingying (Yellow) and Nini (Green). Zheng Feng, BA4EG, will be the QSL manager for all stations. QSLs can be sent either direct or via the bureau and will begin to be answered in October. A Web site supporting the Special Event stations will include an on line log search, QSL card received and sent status, as well as other information <http://www.bj2008ses.com.cn/>; award criteria will soon be posted on the site. -- Thanks to "The Daily DX" for this information

* New Amateur Radio Satellite Receives OSCAR Designation: Earlier this week, Bill Tynan, W3XO, announced that Amateur Radio satellite Delfi C-3 <http://www.delfic3.nl/> has been issued an OSCAR number: Delfi-C3 OSCAR-64 or Dutch OSCAR-64. The shortened version of either of these two designations is DO-64. Delfi C-3 was successfully launched April, 28, 2008 from India aboard a Polar launch vehicle and was successfully commissioned, currently transmitting telemetry on the 2 meter amateur band. In addition to its 2 meter downlink, Delfi C-3 has an uplink on the 70 cm band. This newest amateur satellite was developed by a team of some 60 students and facility members from various polytechnic schools in The Netherlands. Delfi C-3 carries two experiments: one involving thin film solar cells developed by Dutch Space, and an autonomous wireless Sun sensor from the Dutch Government Research Institute (TNO). According to Delfi C-3 Project Manager Wolter Jan Ubbels, Delfi C-3 has been duly coordinated through Region 1 IARU representative Graham Shirville, G3VZV, that the satellite meets all of the criteria necessary to be issued an OSCAR number. "AMSAT-NA is pleased to welcome DO-64 into the family of Amateur Radio satellites," Tynan said. "We are hopeful that it will fulfill its intended mission of furthering education and increasing interest in the Amateur Radio space program. We congratulate all of those responsible for designing, building, testing and launching this new Amateur Radio satellite and look forward to its long and productive life."

* Nominations for Young Ham of the Year Due May 30: Nominations for Amateur Radio Newsline's Young Ham of the Year award are due no later than May 30. According to AR Newsline's Bill Pasternak, WA6ITF, "We have not received any nominations for this year's award. Not a single one by e-mail. Not a single one by the US mail. Not even a phone call or e-mail asking for a nominating form." He said that due to everything needed to take place in preparation for the award ceremony, "it is impossible to extend [the deadline] beyond [May 30]. Any nomination received electronically after midnight May 30 or postmarked after midnight on May 30 will be deemed ineligible. If no valid nominations are received by that cutoff date and time, the award program for 2008 will be cancelled." Pasternak defined "valid nomination" as a nomination for "a youngster age 18 or younger who has made a major contribution in some way to the betterment of Amateur Radio. This can be through public

service, technical development, contributions to the state of communications sciences, recruitment of new hams or whatever seems to be an accomplishment worth honoring. What is not acceptable are nominations that say something like, 'My 7 year old just passed his tech test so give him a radio.'" The Young Ham of the Year Award is open to any ham age 18 or younger living in the 50 United States, plus Puerto Rico and all Canadian Provinces. A full set of rules, along with a downloadable nominating form is online <http://www.yhoty.org>. The form must have the required substantiating material attached to it. Mail the form and additional material to Amateur Radio Newsline, YHOTY, 28197 Robin Ave, Santa Clarita, CA 91350.

* Notes from the ARRL Contest Desk: ARRL Contest Branch Manager Sean Kutzko, KX9X, has announced that, after receiving numerous requests, he has started a contest blog called Notes from the Contest Branch. "I have just returned from my very first trip to Dayton in 26 years of being licensed. It was a great experience. I'm glad I was able to help answer some of your questions and listen to your suggestions -- and yes, even some constructive criticism. One of the suggestions bandied about was an official Contest Branch blog. Your wish is my command." Kutzko said the new blog will be a place where he can post "official information on all things Contest-related, such as when results for ARRL contests are put online, when awards are going out the door, and if there are any problems you need to know about. This blog will cover both HF and VHF+ contests. I hope this will help keep you informed on happenings here at the Contest Branch. As always, I strive to be available to you. Feel free to drop me a line with any questions, comments, or constructive criticism. Compliments are welcome, too." View the new ARRL Contest Branch blog, as well as other ARRL bogs, on the ARRL blog page <http://www.arrl.org/blog>. Kutzko can be reached via e-mail <kx9x@arrl.org>.

* Notes from the DXCC Desk: ARRL DXCC Manager Bill Moore, NC1L, reports that the 2008 TI9KK DXpedition to Cocos Island <http://www.ti9kk.dh8wr.com > has been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> to have your DXCC record updated," Moore said.

> of available technology in a way that some folk might not see as useful,
> but others might.

The Big Problem I see is that ham radio will never be competitive in
areas where there is a similar mainstream/commercial alternative. IOW,
why would any non-ham with a cell phone that can text want a ham-radio
text-message device?

Where ham radio has always been a success is in offering things that
are *not* available anywhere else. For example, in the days before
cell phones, repeaters and autopatch were a big deal because they
offered communications that the average person could not get any other
way.

This doesn't mean I'm against anyone building whatever kind of ham rig
strikes their fancy, as long as it meets Part 97 rules. All I'm saying
is "do what interests you, don't expect it to attract a certain
demographic".

Well, there IS Salem Mall for outdoor space... it's got a lot more than
it used to. And, IIRC, there's an abandoned Walmart not too far from there.

Oh? Before ham autopatches were popular on repeaters, the telcos -
both wireline and non-wireline - offered Mobile Telephone Service
(MTS) using mobile operators and Improved Mobile Telephone Service
(IMTS) permitting subscriber dial. Expensive - you bet - but they
were available to the average person. Some of those transceivers
found their way into the ham market after the telcos upgraded to newer
stuff.

Right you are, Phil! I should have noted that while such services existed, their cost was such that most "average people" could not afford them.

One of the bedrock notions of Amateur Radio is for licensees to "get caught up in" the advancement of the radio art.

In my opinion, too >FEW< are "caught up in that".

Chat rooms for teenie-boppers isn't mentioned in "Basis and purpose"

Actually, the "supply" of (pre-cellular) mobile phone service was
grossly inadequate to meet the demand for it. That is what drove the
development of cellular phones. Even the owners of the limos in which it
was installed often complained of having to wait 15 minutes or more to
get a dial tone. (You will recall that that service used the 150 MHz
band and there was no law against monitoring it. This was pre-Electronic
Communications Privacy Act.)

Spread-spectrum, digital modes, moonbounce . . . none of these are
mentioned in "Basis and purpose".

I don't see any conflict between "chat rooms for teenie-boppers" and
"forge new technology". In fact, I see a lot of similarity between
"chat rooms for teenie-boppers" and the groups that have been squatting
on the same frequency on 75 meters for 40 years and complain of
interference, even though there's lots of unused newly-allocated space.

Some of those younger hams contribute a lot to our hobby, and I wish we
could figure out ways to attract more of them. Maybe a good start would
be to recognize their potential and quit using derogatory terms to
describe them.

Hear Hear, Steve!

I would respectfully suggest that we as hams give a little thought as to
whether or not we actually want young folk in the hobby.

This is beyond the simple statements such as "we need more young people
in the hobby".

Probelem as I see it is that while we might sayt that, alll too many of
us have an implied addidition to that of "As long as they are exactly as

we are.

And the problem is, "we" is an interesting one word.

I know many hams who are surrounded with like minded people, other Hams who share similar interests. They have an outlook in which they think everyone is like them, or at least everyone should be. Those who do not share their outlook are inferior, or at best misinformed.

Strangely enough, many of these hams were licensed at a very young age.

What happened? I don't really know, but I suspect that there were some old timers who just couldn't stand those young hams of yesteryear, too. I'll bet they had names to call them.

related story

When I was a wee lad, after a lot of bugging, My parents bought me a CB Walkie-talkie one Christmas. The other one of a set was bought by my cousin's parents. About 0600 Christmas morning, I went outside and called "anybody listening?". Bam, my cousin called back from a couple miles away. I was hooked.

Fast forward to about 6 months later. A friend and I tried to join a CB club. Wow, what a mistake! After a little talk among the members, we were told we couldn't join, and they would appreciate it if we left immediately. That left an impression. To this day, I have a problem with superior people. But I bet they were pretty happy they got rid of us.

Fast forward to today.

Kids are a little different, but are still kids. They do some different things than we do. One of those things is they way they interact with each other.

If we declare them jerks, then we've lost them. If we even don't say it, yet have that attitude, they'll sense it and find something else to do. Then we've lost them.

I've been kind of surprised by the negative reaction to my texting HT. This device is not aimed at "us", it is aimed at a new generation for whom texting is as natural as talking to another.

Maybe today's hams don't want young people to get licenses. That's okay, that is a valid opinion.

But I would respectfully suggest that getting the young folk involved will take a different tactic than the way many of us became inolved. I think we should give that some consideration.

I'm bowing out of this thread now.

I second that!

I know a few "young people", and IMHO "teenie-bopper" is a derogatory
term for them.

> I would respectfully suggest that we as hams give
> a little thought as to

Agreed. And we should be honest in recognizing that there is a small
but vocal minority who do *not* want young people to be
hams. Some years back, I saw a proposal to FCC to create a minimum-age
requirement of 14 years for any class of US amateur radio license.

Of course. That's one facet of human nature.

OTOH, Amateur Radio does have standards, traditions,
rules, etc. I don't think it's a good thing to simply accept/promote
any and all "new" things, regardless of what effects they have, simply
because they're new, and to reject the "old" simply because it's old.

That said, we have so much latitude in Part 97 that I think there's
lots of room for 99% of what folks want to do.

That's nothing new. "No kids, no lids, no space cadets" dates back at
least a half-century.

> Kids are a little different, but are still kids. They do some different

> Then we've lost them.

I became a ham at age 13, mostly through what I learned from ARRL
books. The big attraction was that Radio in general and Amateur Radio
in particular looked like a lot of fun to me. And for more than 40
years, it has been.

I think there is a sense that, back in the Old Days, there were young
hams (high school and younger) all over the place. In my experience as
a young ham (1960s-70s), however, that was not the case at all. Ham
radio was a niche thing back then, same as now, even without
computers, cell phones, etc.

There were a few curmudgeons back then who had no time for young hams.
But they were only a few. And a considerable number of young hams
dropped out because equipment was expensive, antennas were huge
compared to their houses, and/or they got interested in other things.

One big "hook", for me was that except for those few curmudgeons I was
not treated as an inferior - particularly on the air. A big part of
this was due to the mode I used - Morse Code. With Morse Code (and
text modes), no one knows your age or gender unless you tell them.
Operating skill, QSO content and signal quality established one's on-
air reputation, not how deep or gravelly your voice was.

To speculate wildly, it might be that one cause for curmudgeon-ness is the fear of what advancements/accomplishments the young folks might actually make.

> I've been kind of surprised by the negative reaction to
> my texting HT.
> This device is not aimed at "us", it is aimed at a new
> generation for
> whom texting is as natural as talking to another.

I think you may have missed the point, Mike.

I don't think the way to attract young people is to come up with some new gadget in an effort to attract them. Particularly if it does something that's already available, such as texting by cellphone.

That said, I think a texting HT is a great idea. But for its own sake; not as a way to "sell" ham radio to young people.

The core value of Amateur Radio is "radio for its own sake". Some folks get that, most do not. The task is to spread that word to all, publicize the wide variety of things hams do, welcome those who are interested, and help them with what *they* find interesting.

Oddly enough, a lot of the young hams I have met are fascinated by Morse Code, simply because it is unique and outside their experience. That doesn't mean it's the only thing to show them, or that all new hams must start out one and only one way. But it does mean we cannot assume young hams are only interested in "new" things.

> Maybe today's hams don't want young people to get
> licenses. That's okay, that is a valid opinion.

I'd say that in a few cases there is no "maybe" about it. But only a few.

I say that such an opinion runs counter to everything Amateur Radio stands for.

> But I would respectfully suggest that getting the young folk involved
> will take a different tactic than the way many of us became
> inolved.

Some ideas:

1) Presentations at the middle-school and even elementary-school level - including the parents.

2) Identify local hams who are available to be Elmers. (I suspect that some of the curmudgeon-ness is due to the fear of being expected to be an Elmer).

3) Subtle helps to prospective young hams, such as a ride to a club meeting, Field Day or hamfest, the loan of a rig, the gift of a box of "old wire" that happens to contain all the parts needed to build an antenna, etc.

4) Inclusion and acceptance. This means being considered an equal, or at least a potential equal. For example, put new hams or prospective hams to work with FD setup, logging, etc. (That means knowing how to do things the right way, though!)

Me too. But I do think that we have increased competition these days from other outlets for prospective hams, and other things that "look like a lot of fun". Computers and such gadgets are a part of daily life for young folks these days; it's only natural that they gravitate in that direction. I suspect that the vast majority of them have not been exposed to ham radio at all.

I had a good buddy when I was that age who was interested in radio and electronics, and peer pressure being what it is, I followed his lead. Those people are fewer these days.

Yes, I agree. I do remember more young hams back then, though. It was mostly a hobby for older people, but I do think there were more young hams then.

> There were a few curmudgeons back then who had no time for young hams.

A considerable number of old hams dropped out for similar reasons, sometimes providing a source of equipment for the new folks.

This was a very important consideration for me, too. Even for the operation that I did on phone, by and large people treated me as an equal, and if I demonstrated skill they recognized that skill without regard to my age. Even in traditional in-person interactions like club

meetings and Field Day operations, I was treated as an equal if I could demonstrate that I deserved to be treated that way. Generally speaking the local ham community was eager to reach out and teach me if it was obvious that I needed teaching.

I can't think of another hobby where I could have gained access to such a community of people who were often peers of my parents.

> To speculate wildly, it might be that one cause for curmudgeon-ness is
> the fear of what advancements/accomplishments the young folks might
> actually make.

I think you give this segment of our hobby too much credit <grin>.

There are always going to be folks who simply have no social skills or prefer not to deal with "kids". There will be people who enjoy building or experimenting, but they have no desire to interact with other humans. That's their prerogative.

It's a shame when they make newcomers feel unwelcome, but it's going to happen in any group. Other members in the group must compensate.

> The core value of Amateur Radio is "radio for its own sake". Some

Spreading the word is more important these days than ever before. We can't expect people to become interested in something that they don't know exists.

> Oddly enough, a lot of the young hams I have met are fascinated by

But CW is new to them. It's different. Unique.

Ham radio is never going to appeal to everyone. Never has; never will. The majority of people, young and old, tend to go with what has the interest of the mainstream. Hams have always been somewhat "different", and the hobby has always appealed to a segment of the population that wasn't interested in doing whatever the fashionable thing might be at the moment.

> Some ideas:
>
> 1) Presentations at the middle-school and even elementary-school level

Getting the teachers involved would be ideal. Teachers are an incredibly important influence on their students.

> 2) Identify local hams who are available to be Elmers. (I suspect that

This is indeed key. It's what made the hobby so important for me as a younger ham.

> 3) Subtle helps to prospective young hams, such as a ride to a club

I do think this is the most important aspect. I'm not suggesting that we coddle people simply because they are young, or fawn over them. But we should give them the opportunity to contribute as equals, with appropriate encouragement and assistance. Breaking into the "old boys' network" can be impossible if the old boys don't make an effort to be inclusive.

What's interesting to me, is the "vintage" of those "elitists". With a few exceptions they are usually not "old timers" or "newbies" but rather those licensed in the 70's through about 1988 or so. These are the ones who posture about "purity of the ham race" and look down their nose at any ham who "isn't like them". They are, by and large, products of the incentive licensing system with it's fragmentation of the hobby into exclusive ghettos, reeking of "status" and "rank" and "I can beep faster than you can beep".

When I got into this hobby, you got no special call sign, no special status, no special band segments, the callbook didn't show your class, and nobody could poke around the QRZ.COM website to check your "status". All of us, >ALL OF US<, exuberantly played in the ether as equals, and nobody gave a rip if you were a Conditional, General, Advanced, or Extra. You were a ham - PERIOD! I think that's what makes us old-timers more accepting of those who "don't act just like us".

You have to admit that there were always things which looked like a lot of fun. In our day it was guitars, skateboards, stereo equipment, photography, sports and GIRLS. Not many of us were exposed to amateur radio in terms of percentages of young people.

> I had a good buddy when I was that age who was interested in radio and
> electronics, and peer pressure being what it is, I followed his lead.
> Those people are fewer these days.

I had an old Zenith tabletop radio with shortwave which covered 5.5 to 18 MHz. I used it initially to listen to broadcast radio. Then I discovered the shortwave broadcasters and finally the 40 and 20m hams using AM. Luckily for me, I heard a ham who was in our town and he lit the fire for me.

>> I think there is a sense that, back in the Old Days, there were young

There were lots of young hams and young SWLs who were interested in becoming hams. They read Pop'tronics and EI. Most of the Novices I worked were in my age group. K8CFT administered Novice exams to a number of junior high and high school aged boys. At one time, the little town of Oak Hill, West Virginia (population 7,000) boasted seven young Novices along with six or seven higher class radio amateurs. Of

those seven hams, five are still licensed and active. One dropped out of amateur radio and one (who was active) died last year. The key was that *we were interested*. No one can make someone spend his leisure hours doing something in which he has no interest.

>> There were a few curmudgeons back then who had no time for young hams.

Quite a number of those who were teenage hams dropped out because of their interest in girls or cars or because they went off to college and had no room for antennas and rigs or no time due to studying. Many of them returned to amateur radio. Many got married and started families and returned to ham radio. Most never left amateur radio but their activity varied.

In my first few years there was no real ham community in my area. I depended upon the support and largess of a number of individuals. A move to Miami in 1966 exposed me to amateur radio clubs--some of them quite large. I can't think of many areas where a young person can be treated as an equal by a banker, an attorney, a doctor, the fellow who runs the local water company or the man who operates his own gas station.

> I can't think of another hobby where I could have gained access to such

> That's their prerogative.

Thankfully, most of them aren't hams. Ham radio is all about
interaction with other humans. I've met a few reclusive or squirrelly
or curmudgeonly radio amateurs over the years, but their number is small.

> It's a shame when they make newcomers feel unwelcome, but it's going to

That's what I liked about the Jay Leno texting versus Morse piece of a
couple of years back. It gave exposure to amateur radio in a fun way.

When I was licensed, I was living in a remote West Virginia mountain
town. Long distance telephone calls were expensive. We received three
TV stations only via cable. Listening to Bruce Bradley on WABC or Dick
Biondi on WLS meant contact with the rest of the world. Books brought
the world to my door and amateur radio meant that I could use a rather

primitive radio station in my bedroom to contact another fellow
operating from his basement in France, an outbuilding in Russia or a
from a stucco house in Chile.

>> Some ideas:
>>

I think that most do make an effort to be inclusive and to show a
newcomer the ropes. Some of it has to do with the old boys. Much has
to do with the attitude of the newcomer.

I'd prefer to make one myself, except I'd have to buy an AMBE chip from DVSI. DVSI, being the patent holders, are the only ones who can make them (without paying 6-7 figures for the license, and even then only in hardware). And that seems to me to make it just as proprietary as Pactor III.

The difference is the level of exposure as a user. Today, every young person is exposed to personal computers as a user, in the same way that they are exposed to cars as a user. Most of them won't go past the level of a user, but a few will turn into gearheads or into computer geeks.

That's my point. I, too, had access to a shortwave receiver and followed much the same path that you did. That's much less likely to happen today. Back then, people were exposed to radio as users. Today, they're exposed to it via cell phones but they don't perceive it as radio. Entering ham radio via the SWL route is very rare these days.

> There were lots of young hams and young SWLs who were interested in

> hours doing something in which he has no interest.

Yes, but you can only be interested in something if you know it exists. If the option of finding out about ham radio via the SWL route has disappeared, how do young people find out that they have the option of spending leisure hours in ham radio?

I think that the best option to attract young folks into the hobby is to expose them at school. Doing that requires teachers who are at least amenable to the idea. I suppose that getting publicity into the channels that they use could work, but I'm not sure how to do that. I'm not even sure what channels to shoot for.

Another option is to attract older recruits. This has its own set of issues since someone who is busy raising a family and building a career may not have vast amounts of spare time to spend in a hobby.

But for me the bottom line is that it's important to attract people into the hobby to replace the folks who are leaving. As the ham population ages and declines, it becomes more and more difficult to find a critical mass of local hams to support things like the local club, FD operations, Skywarn, and anything that's not done on the air. This problem is especially evident in rural areas that don't have a large population to draw from.

Those things are part of daily life for almost everyone (in developed countries) today.

But amateur radio has had that sort of competition for many decades - it's nothing new.

> I suspect that the vast majority of them have not been

Here's one data point for you:

I graduated from high school in 1972. Middle class suburb of Philadelphia, emphasis was on math and science. Out of about 5000 students (boys and girls in two side-by-side schools), there were never more than a handful of hams. Less than a dozen in the four years I was there (which covers 7 graduating classes. At any one time there

were no more than six hams in both schools.

vious that I needed teaching.

Yep. But at the same time, there had to be a willingness to learn.

> I can't think of another hobby where I could have gained
> access to such
> a community of people who were often peers of my parents.

And on a first-name basis, too. A bank president was "Joe", a
respected MD was "Bill", a highly skilled professional radio operator
was "Lou".

> skills or prefer not to deal with "kids".

That's true, but it's not what I was getting at.

What I have seen happen more than a few times is the case of a young
amateur rising through the ranks very quickly, passing older and more-
experienced amateurs on the way. Not just in license class (although
the "incentive licensing" changes helped that) but in things like DXCC
countries, code speed, contest scores, operating skills, new
technology in use, etc.

While most hams are glad to see such things, I suspect that there were
at least a few who did not like being bested at *anything* by
young(er) folks. Particularly when it's in the area of skills.

> > assume young hams are only interested in "new" things.

> But CW is new to them. ?It's different. ?Unique.

Yes. it's new to them. But they rapidly recognize that it's not a new
technology at all. Doesn't matter; it's the uniqueness that makes it
interesting.

Uniqueness is a big deal to the young people I know. I clearly recall
seeing the first Harry Potter book appear - and seeing it being read,
in hardcover, by local kids as young as 2nd and 3rd grade.
"Conventional wisdom" says that "kids today" would not read books, let
alone buy them (or pester their parents to buy them), yet here they
were doing just that. Because the stories are unique.

> Ham radio is never going to appeal to everyone. ?

> of the population that
> wasn't interested in doing whatever the fashionable
> thing might be at the moment.

I think it's much simpler than that. Some people like the idea of
"radio for its own sake", others can't see the point.

That applies to almost any voluntary activity. For example, most
golfers will never play at anything like a professional level. The

game takes a considerable amount of time and expense, is dependent on season and weather, and even when you play really well only a few will ever know.

Yet lots of folks play, because it's not only fun but a challenge.

Same for sport fishing, target shooting, running marathons, and a variety of arts and crafts done for pleasure. In all cases the journey is as important (if not more important) than the destination.

Agreed! But that requires a teacher who is a ham.

Scouting is perhaps the #1 source of new young hams today, btw. Particularly boys. Scouting groups are always looking for responsible adult leaders.

clusive.

Agreed - and that includes being willing to delegate authority.

I will never forget being allowed to run the 40 meter CW setup overnight on Field Day back in 1970. I was 16, a ham for three years, and there I was with a Drake 4-line and good antenna on a hot contest band. You can bet I learned a lot that night!

No, it doesn't. It only requires a teacher who is open to allowing
someone to help him/her, and a person willing to help.

I'd like to make a lot of things for myself but I have to buy patented
chips from the license holders. AM radio isn't a proprietary protocol,
but a lot of the parts used to make an AM radio are patented. You buy
them only from people the licensee has approved.

Hi Mark,

Could you elaborate on the relationship of electronic parts to
proprietary codecs for radios?

I think there is a little confusion here regarding proprietary aspects
of electronics and radio concepts.

Any patents held on electronic components are patents to safeguard the
makers methods of making them - not the concept of the parts. The
resistors, diodes and other parts are basic electronic building blocks,
and anyone can make those.

I could make a nicely functioning radio out of pencils, microscope
slides, aluminum foil, scrap wire, an old oatmeal box, and If I really
wanted to get involved, I could construct my own vacuum tubes and design
and build a superheterodyne radio.

As long as I built them according to my own methods, and did not
infringe on the methods used by a manufacturer, not one patent, nor
intellectual property would be violated.

Another way of looking at this, is that I can go to the local Radio
Shack, and buy a handful of components to build say, a blinking light.
Maybe an IC-type 555, an op amp or two, and their needed peripheral parts.

My finished device is not owned by the companies that made the parts. If
it is my original design, I can claim copyright on it.

Now on to the intellectual property of the D-Star codec.

D-Star uses this Codec, and it is proprietary.

If you do not use the Codec, you will not be able to use the D-Star
repeater.

If you can use the repeater, you have the Codec.

This differs in many important ways from normal repeaters, and normal Codecs in use by Amateurs.

Examples of non proprietary Codecs are(randomoly picked except for D-Star:

SPEEX- lossy but good ro IRLP

FLAC - lossless

Proprietary codecs:

AMBE

The D Star Codec.

The ramifications of using each are important.

Amateur Radio has traditionally used open source whenever possible, because we also have a tradition of working on and improving those things that we work with. Examples are the PSK31 and RTTY modes. Amateurs are continually providing new and improved software for those. There are even multi PSK channel data transmission softwares out there. A lot of PSK signals fit within the bandwidth taken up by one SSB voice transmission.

My experimenting with a particular PSK engine is usually based on going to the web, and downloading it. Most applications are free, but even those that have to be purchased, the whole sum is going to the developer.

Hypothetically, say a group of hams came up with a digital repeater using the SPEEX Codec. (SPEEX is used for illustration purposes only, it might not be the best choice)

Most of us would be able to either build or purchase an interface that would allow us to interface our radios to the computer, as software would be easily available to run them.

Hand helds would be easily adaptable, as there is no specific need for a computer, just the necessary software and hardware to turn an audio stream into a digital stream, in the same manner as cell phones do (they use a different codec, but the principle is the same.

I would note that there has not been a huge amount of work done by Amateurs in the VHF and up region as related to Digital voice. A lot of this can be ascribed to the fact that an SSB channel is already pretty narrow, so there aren't orders of magnitude gains to be made in conserving bandwidth. Another issue is that with digital signals, multipath can be a severe problem. Anyone who does doppler direction finding (I do) can tell you that at VHF and up, Multipath is a major problem. What might be a little whoosh or garble on FM without upsetting readability can sometimes just keep the digital system nice and quiet.

Now let us turn to our D-Star equipped repeater.

What will communicate with it:

Icom D-Star Equipment
Kenwood (a rebranded Icom, sold only in Japan
Moetronix Can hear and talk D-Star on the internet.

That is a pretty short list. One for all practical purposes You buy the equipment and you use it.

Do you know what the price for the AMBE Chip is in quantities of one? It may not even be realistic for an amateur to attempt to build one of their own.

Mike

The "leadership" of our ARES/RACES group are D-Star fanatics. They claim, though, that the ICOM equipment does have an FM mode to pass FM signals through. I have no idea how that works (dual detection channels?).

As I understood it, D-Star is a set of open protocols generated by individuals in the Japan Radio Club (or whatever the formal name is) and ICOM was the only one so far to implement them in hardware. If someone else wants to implement them, a good IP lawyer can steer them in the direction of non-infringement. A good (non-ham) friend of mine is the IP attorney for Nikon USA and he is always checking to see that the newest stuff proposed does not infringe patents by Canon and others, yet digital photography uses open standards that everyone implements in their own way.

One of our club members is the author of D-Rats (that's Star spelled backwards), a set of open-source applications for functionality of D-Star radios. There's nothing proprietary about what he is doing or its applications, and he comes out with updates weekly. I'm not a software person so I can't comment on hooks and APIs and such.

Hey, I would be a D-Star "nut" also were the radio fairy to deliver four dual-band mobiles and an HT on my doorstep one night. We'll leave the light on for ya'.

I've looked to see if such a thing (fm voice) exists within D-Star.
Could these folks steer us to some documentation? Here are the RF
modules I've found:

http://homepage.mac.com/rrucker/d-star/D-Star_repeater_modules.pdf

Do you know of any coordination or frequency placement issues involved
with opening a presumptive FM side?

You know that whole D-Star "repeater" is not a repeater issue, so
frequencies are opened up for it in repeater crowded areas. Those
frequencies would not be proper repeater frequencies for an FM repeater.

Do you know a reference for that action Phil? I've looked a bit on the
FCC site, but haven't found it yet. I think it was in 2006.

I'd be interested in experimenting with it. We just don't have a
digital repeater for a long way around here, and the costs of putting
one up just don't make it happen. It kind of reminds me of the old
credit problem for young people.

Need a loan? You need a good credit rating
Need a good credit rating, you need to get a loan.. 8^)

Like you said, if the radio fairys were to drop a system off... 8^)

Yes, by definition, if you don't infringe, you haven't infringed. You can build just about anything for personal use and not infringe.

>D-Star uses this Codec, and it is proprietary.

The digital voice part of D-Star uses a codec. The rest does not. The protocol is open and published. Certain parts used to implement the protocol are patented and sold only by a single source. When 741s were new, they were expensive and sole-sourced.

>If you do not use the Codec, you will not be able to use the D-Star
>repeater.

I'm not sure you are correct about that.

>This differs in many important ways from normal repeaters, and normal
>Codecs in use by Amateurs.

If you don't have an FM radio, you cannot use an FM repeater.

Just as you can build your own copies of patented things for personal use, as you mentioned earlier, you can build your own copy of an AMBE codec for personal use. TI won't tell me how to build a 741 IC; AMBE is under no compulsion to tell you how to build their codec. If you buy one and reverse engineer it, that's fine -- for personal use.

>Amateur Radio has traditionally used open source whenever possible,

Airmail and Winlink 2000 are two very large obvious counterexamples. The firmware in a KPC3+ another. The firmware in the repeater controller I had to reverse engineer to make usable, ditto. It is common for ham applications to run only on Windows -- the epitome of closed source. The control and programming software from Kenwood for the D700 is -- closed source windows only. Look around at all the Motorola gear in use in ham radio. I've yet to see an open-source version of ANY of the programs required to program a Motorola.

Yes, there is open source for many things. No, it's not always used. The "tradition" is limited.

>Now let us turn to our D-Star equipped repeater.

A very incomplete list, I believe. And, at an early stage of development, not unexpected.

>One for all practical purposes You buy the equipment and you use it.

For all practical purposes, 2m and 440 are "you buy the equipment and you use it". I don't know many people building their own HTs, and even those that did used the Heathkits. For most commodity ham uses, homebrew is rare.

>Do you know what the price for the AMBE Chip is in quantities of one?

About $200.

>It
>may not even be realistic for an amateur to attempt to build one of
>their own.

The ID-1, last I looked, is $1000. About. The IC-V92AD is about $600. An SDR is on the order of $1000 and up. A lot of bleeding edge components are a bit spendy. Ham radio experimentation is a spendy hobby.

Hello gang,

Just got a new computer (need a new HF station to go with it too LOL) and am connecting up to newsgroups. Looks good so far. Took me until 2:00 AM the day I received it as I had to clean out the computer room (orders) and then found out the thing does *not* like my USB 1 or 1.1 devices. Ethernet took care of the USB on the DSL modem.

Along with a nice day here, a new job, new computer and some friends stopping over, things couldn't be much nicer in these parts.

Hope everyone else is having a decent day.

Hello Jim, good to see you here!

I know what you mean about the USB business, The newer stuff doesn't like the older stuff, and most (maybe all) Ham equipment still uses Serial. So I have to get a USB-Serial converter.

My brand new TS-480 is that way. It will probably be a while before the Manufacturers catch up, after all, USB has only been around since 1995 or so. ;^)

Hello Mike,

Now all I need is a good CW key to USB converter ..... :)

I've got a few 12AX7s, one 12AT7, and a couple of 12AU7s. Got any
schematics for a converter using them? :))

Seriously, I am trying to get everything together on this end. I need a few
e-mail addys (you know what I mean) as I've nothing in the compooter LOL.
I'm about to try the Kodak digital camera .... USB 1.0 .... I think I've got
to get another camera. That thing is USB 1.0 and methinks that the newest
operating systems consider them about equal to ISA busses :)

All kidding aside, folks cannot possibly know how much is offered in amateur
radio. One has to get interested and go beyond - well beyond - the tests.
If it sparks an interest, the sky is the limit. I keep reading QST and the
Radio Amateur's Handbook. I enjoy the articles. When the VA put me on to a
possible job, I went and applied. There was a test attached. Fill in the
blanks. Simple schematic *symbols*. All were easy for me. Grounds,
capacitors, crystals, inductors. But you'd best be able to identify
transistors. Not just NPN and PNP bipolar transistors, but N-channel and
P-channel JFETs as well as enhancement mode and depletion mode IGFETs.
Simple enough so long as you get hooked with the ham radio virus LOL.

It seems so silly to argue over who is 'qualified' as a ham. Darn, the
purpose, at least to me, is to introduce folks to communication and
electronics. Let everyone take it from there.

So long as we treat each other with respect, we may well get the opportunity to 'infect' some more youngsters with the bug. And get them to progress. Get a degree in electronics or physics, or at least get involved as a technician. One never knows what ham radio can lead to. I've had the good fortune to see what ham radio can do. I believe it was in 1968 that Hans (K0HB) and I re-established communications between Saipan and Guam. The Navy had a problem. The hams got the comms going. And I'd be happy to serve again with Hans in the lead. Never argue with a chief - especially a *master* chief. He is one heck of a guy. We both did what we had to do.

Life is too short, my friend, to let animosities get in the way. D@mn the torpedoes, full speed ahead!

73 from Rochester, NY
Jim AA2QA - Vietnam vet and thankful to have had Hans at the other end of the circuit way back when sparkplug, sparkplug1, and KG6AAY hooked up on 75 meters. Kilo Golf six All American Yankee

Amateur Radio Newsline(tm) Report 1607 - May 30, 2008

Amateur Radio Newsline report number 1607 with a release date of Friday, May 30th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Russia launches its RS-30 ham radio satellite. The FCC says it will soon clarify what a repeater really is, no new subbands on 2 meters for digital voice operations, a quick look at what was new at Dayton and the Anchorage Hamfest says to "come on up!!" Find out more on Amateur Radio Newsline(tm) report number 1607 coming your way right now.

HAM RADIO IN SPACE: RUSSIA LAUNCHES RS-30

Ham radio has a new bird in the sky. Bill Pasternak, WA6ITF, has the details:

--

Russia has successfully orbited a new ham radio satellite called Yubileiny. Also designated as RS-30 the bird's CW beacon is operational on 435.315 MHz with reports of other signals also on 435.215 MHz as well.

At the time of writing it is still not clear if RS-30 is carrying a linear or FM transponder. It does appear to be in a 1500 km orbit which would give a pass time of up to 20 minutes and enable stations over 7000 km away to be worked.

Work on the satellite started in December 2004 with the intention of launching it in 2007 to commemorate the 50th anniversary of the first satellite Sputnik-1.

We will have more ham radio space related news later on in this weeks Amateur Radio Newsline report.

From the studio in Los Angeles, I'm Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.

--

A full report on the satellite with pictures can be seen at www.npopm.com/?cid$2
(ANS)

RESCUE RADIO: HAMS SUPPORT CHINA EARTHQUAKE RELIEF

Ham radio post quake rescue operations are continuing in China. Jim Linton, VK3PC, of the WIA News is in Forrest Hill, Australia, with the latest update:

--

Situation report on China earthquake

The Chinese Radio Sports Association is quietly very pleased that radio amateurs in its country have been a key part of the rapid government-led response to the big Sichuan earthquake.

The death toll climbs daily with many thousands still missing and five million left homeless following the 12th of May quake. The extensive disaster recovery work that includes disease prevention measures, providing food and shelter will continue for some considerable time yet.

What is now emerging are more details of how radio amateurs swung into immediate action to provide emergency communications.

Clearly, when the IARU national radio society CRSA asked in the early days for three designated HF frequencies to be kept clear, those frequencies were being used for urgent traffic.

Fan Bin, BA1RB, on behalf of CRSA, said the society expresses sincere thanks for the cooperation around the world to free up those frequencies, and acknowledges having received inquiries and ï¿½warm concerns' of amateur
radio societies worldwide.
.
As the disaster response begins to lessen in intensity, government officials and the news media such as the China Central Television have given recognition that amateur radio amateurs stepped in to provide vital links.

The TV service in a news report said that when all other communication means failed, amateur radio operators came out to provide valuable first hand information from the centre of the earthquake disaster.

This included an HF link for the Red Cross from the disaster area back to the nation's capital city of Beijing, enabling that aid agency to do its essential humanitarian work.

In other action, Luo BY8AA continuously coordinated VHF/UHF communications for a 100 km radius from Chengdu, the capital of southwest China's province of Sichuan.

More repeaters were set up in two other cities that are among the worst hit areas outside the epicentre, to form an effective amateur radio communication network.

In another report two ham radio operators drove to the centre of the earthquake area and had a repeater set up by the morning of 13 May just hours after the disaster hit.

Their repeater enabled the transmission of rescue instructions, status reports and was a main communication channel for public use when telephone services were down.

Among the traffic that repeater carried were communications for the Mayor of a city, who gave his orders to those on the front line rescue and recovery activity, and to receive up to date situation reports.

A fuller story on the role amateur radio played in China's worst earthquake disaster in 58 years is expected later this month but there's no doubt the individuals involved did their very best under extreme conditions that included hundreds of after-shocks.

Now closing this report with an acknowledgement of information provided by Fan Bin BA1RB, this is Jim Linton VK3PC, Chairman of the IARU Region 3 Disaster Communications Committee, for the Amateur Radio Newsline.

--

Meantime the Southgate news reports that radio amateurs in Hong Kong have been sending much needed supplies to assist victims of the Sichaun, China earthquake that occurred almost three weeks ago. The Chinese Radio Sports Association website said that on May 18th members of the Hong Kong Amateur Radio Communications Association - VR2HAM - donated a second batch of food, medicine, communications equipment and other materials to the ongoing disaster relief efforts. (VK3PC, WIA News, Southgate News)

**

RADIO LAW: IS IT A REPEATER OR IS A DUCK A DUCK

Back in the United States, the FCC says it will soon answer the question of when is a repeater and when might it be is it something else? That's what the Northern California Packet Association wants to know and it has filed a request for clarification that asks the FCC define what it means by the term simultaneously as it is used when defining what a repeater is. According to the FCC's Bill Cross, speaking at the recent Dayton Hamvention FCC forum, this question is the result of some folks who claim D-Star repeaters are not repeaters by virtue of their inherent analog to digital and digital to analog lime lag:

--

Cross: "The Northern California Packet Association has filed a request for clarification that the FCC define what is meant by the term simultaneously as it is used when defining a repeater.

"The issue here is that in California, D-STAR repeaters have been coordinated on channels that are set aside for auxiliary stations, on the basis that, because there is a delay in retransmission of the signal, the retransmission is not simultaneous, and therefore the repeating station is

not a repeater.

"Others have advanced what he calls "the duck argument: If the station looks like a repeater, if it functions like a repeater, and it sounds like a repeater, it should be treated as a repeater -- and confined to the repeater subbands.

"A decision on this will be coming shortly."

--

The applicable rule that Bill Cross seems to be referring to is section 97.3, subpart 36. It defines a repeater as an amateur station that instantaneously retransmits on a different channel the angle-modulated phone or image emission transmission of another amateur station.

But this rule was written before the advent of digital audio systems that by their very nature have some inherent delay. Whether or not the FCC will strictly adhere to this definition or modify it to meet current technology could well determine the future of digital audio repeaters. Bill Cross says that a decision on this issue will be coming from the Commission in the not to distant future. (ARNewsline)

RADIO LAW: DON'T ASK THE FCC TO RE-REGULATE HAM RADIO

If there was one lesson that came out of the FCC Forum at the recent Dayton Hamvention it is not ask the FCC to re-regulate any aspect of the service because its just not going to happen. Case in point, the recently denied petition filed with the agency by Mark Miller, N5RFX. The FCC's Bill Cross says that the rules now in place are more than adequate to minimize interference from digital operations to other existing modes:

--

Cross: "The request that we limit the subbands for automatically controlled digital stations are permitted to transmit on to only those specified in (Part) 97 is curious because the rules as they are today limit transmissions from these stations to a bandwidth of no more than 500 cycles or Hz. on frequencies authorized for RTTY and data emissions outside of the automatically control subbands, when a locally or remote controlled station is interrogating that automatic station. If the idea behind this request was to limit these stations to the subbands to minimize interference, we

were not persuaded that limiting stations that were transmitting in response to interrogation by a station where there was a control operator present would cause increased interference because these stations are already limited to a 500 Hz. bandwidth."

--

In other words, the technology of tomorrow is about here and its up to all of us in the ham community to learn how to introduce it and how use it without the help of the FCC. (ARNewsline(tm))

**

RADIO LAW: NO NEW SUBBANDS FOR DIGITAL VOICE

At the same time, the FCC made it clear that its not going to make specific spectrum available for digital voice relay operations. This after the agency recently turned away a petition from two California hams who wanted the creation of an additional 300 kHz wide subband for D-Star and other digital voice operations on the two meter band. Again Bill Cross, W3TN:

--

Cross: "The third item that came out had to do with 2 meters. We received a request from two hams out in California. What they wanted was for us to (allow) a little more spectrum -- 300 KHz -- to be authorized for repeater stations. Currently, repeater can use 3 of the 4 Mhz in the 2 meter band. They claim that additional spectrum is needed for repeater stations because some amateur repeater stations have begun (using) certain digital communications protocols and digital voice operations that are incompatible with the existing analog operations because digital voice users are unable to determine if the desired frequency is in use by An analog station. Inadvertently, they say, digital systems can cause harmful interference to analog systems. They also claim that coordinating groups have been unable to separate analog and digital voice repeater operations because the available repeater spectrum on the 2 meter band is fully occupied by existing analog systems.

Now, as I mentioned, repeaters are prohibited from using two 500 Khz segments of the 2 meter band in order to minimize harmful interference to other amateur service stations. Believe it or not, some licensed users use 2 meters for things other than repeater operation. The petition was turned down because their request would likely result in increased interference to other operations such as Packet, moonbounce, and simplex type operations. .

--

So how do you make room for digital voice repeaters where no channel pairs are available? Cross says that's up to the ham community and the nations frequency coordinators to work out and not the job of the FCC.

Cross also came down on those hams who hold a coordination but have no system on the air. He stopped short of directing that coordinators act to free up channels where a coordination exists but their is no repeater using

it. None the less his message to the coordination community and to those who have repeaters only on paper came through loud and clear. (ARNewsline(tm))

**

RADIO LAW: UN-NEEDED PETITION LAUNCHED OVER INDUSTRY CANADA MISTAKE

A strange story out of Canada where mis-information on the part of one of that nations telecommunications regulators lead to an un-needed petition from the ham radio community. One asking that nations political leaders to force Industry Canada to resume regulating the nations ham radio operators, even though it had never stopped doing so. Here's what happened.

Back in early May, Eddie Pereira, VA3EDP, sent a letter to Industry Canada regarding interference complaints in the Canadian amateur radio service. The reply he received on May 13th from the Spectrum Management department in Toronto likely caught him off guard. It read, and we quote:

"The Amateur Band is self policing now because it has been de-licensed for the past few years. Industry Canada is no longer the regulatory body overseeing the Amateur Band operation."

This response did not sit well with VA3EDP, and he decided to do something about it. His action came in the form of that on-line petition to Canadian Parliamentary leaders that urged them to force Industry Canada to resume regulating the Canadian amateur radio service. The petition garnered close to 300 signatures in its short life. Some from real heavyweights in Canadian ham radio politics.

Well, you guessed it. The Industry Canada bureaucrat who had responded to Pereira's original information request was totally wrong. Industry Canada had not abandoned the nations hams and has no plans to do so. But it took intervention from Radio Amateurs of Canada to straighten it all out.

On May 20th Radio Amateurs of Canada contacted Industry Canada which confirmed that the information sent to VA3EDP was incorrect. In fact, the agency affirmed it is the regulatory authority for Amateur Radio in Canada.

VA3EDP has since received a message from the acting Director of Industry Canada's Toronto office confirming that the original unsigned e-mail was sent in error. He says that he will be meeting an official of the Industry Canada in the near future to discuss a spectrum management issue that was the cause of his initial inquiry with. (RAC, others)

RESCUE RADIO: GAREC 2008 TO BE HELD IN GERMANY IN JUNE

The fourth Global Amateur Radio Emergency Communications Conference, GAREC-2008, will take place on June 26th and 27th in Germany. This, in concert with the German HamRadio 2008 convention that begins on the 27th of June at the Conference Center of the Friedrichshafen.

GAREC-2008 will focus on the co-operation among IARU member societies and with specialized groups working on emergency communications in the Amateur Radio Service. The event is being organized by the IARU Region 1 Emergency Coordinator, Seppo Sisatto, OH1VR. Working with him ias the same team that has already put on the highly successful GAREC Conferences in Tampere, Finland, in 2005 and 2006. (Southgate)

**

RESCUE RADIO: DELAWARE ARES GROUP RESPONDS TO MAJOR STORM

Back in the USA, Sussex County Delaware ARES sprang into action on Monday May 12th, This as a major late season storm strained resources in the states coastal region.

As wind gusts were clocked in excess of 60 mph and inches of driving rain blanketed the area, Sussex County ARES activated its' Emergency Radio Network.

Beginning at 09:50 hours the group began providing eyewitness reports of weather, flood and traffic conditions throughout the county. Some 32 members worked for hours reporting power outages and road closures due to flooding and debris. (eHam)

**

ON THE AIR: USPS AND ARRL SPECIAL EVENT

To help kick off the 2008 North American Safe Boating Campaign, the United States Power Squadrons will hold a special event June 7 and 8 at the Hiram Percy Maxim Memorial Station. That's W1AW at American Radio Relay League headquarters in Newington, June Connecticut.

The United States Power Squadrons and the ARRL have been working together for the past several years on these campaigns. The ARRL shares in the Power Squadrons' commitment to education, safety and public service. It has been promoting boating and marine electronic education and seminars.

The W1AW special event station will broadcast from 1200 to 2400 GMT on frequencies 3.99, 7.29, 14.29 and 21.39 MHz for single side band phone. The station will also use digital modes PSK31 and RTTY. (USPS - ARC)

DAYTON WRAP-UP: THE LITTLE BIT OF NEW GEAR

If those attending the recent Dayton Hamvention were hoping that a bunch of new gear would be introduced this year, they would have been very disappointed. Burt Hicks, WB6MQV, in the newsroom with more:

--

While 2007 had a load of new product introductions, 2008 can best be described as a year of tweaking and improving what was shown 12 months ago. That's not to say that there were no new products -- just not very many and
nothing really upscale. And unfortunately, nothing that could be classified as earth shattering.

On the high frequency transceiver front Icom did show its soon to be available IC-7200. This unit is being billed as a robustly built transceiver providing coverage of H-F amateur bands plus 6 meters and housed in a box that should be of interest to those who are involved in on-the-go emergency communications.

While Icom does not say that the IC-7200 is waterproof, it notes that extra design steps have been applied to the front panel buttons and knobs. This provides a measure of protection against water intrusion.

Power out is the customary 100 watts. Features include D-P filtering, digital twin pass band tuning, manual notch filter, keypad entry, dual VFOs, voice synthesizer, 200 memories, attenuator, RIT, scanning, 1 Hz tuning and even a USB port on the rear panel. Taken together these features are perfect for those first responders needing the ability to do electronic messagingvia an HF network from a USB connected laptop.

For the crowd on 6 meters and above, the only new item was a quad-band H-T from the folks at Vertex Standard. The latest in its Yaesu brand V-X line, the new VX-8 can transmit and receive in the 50 to 54, 144 to 148, 222 to 225 and 440 to 450 MHz bands. Its submersible design makes it practically an air tight unit that includes a built-in dual speed packet modem with APRS support along with Bluetooth and GPS options. Included are all the other bells and whistles that the very popular V-X line has become famous for.

And from a major supplier hardware standpoint, that was it.

If there were any big losers it was those who are waiting for a second source for D-Star transceivers and HTs -- in the hope that would bring competition and possibly drive prices down.

But no other company showed up at this year's Dayton with a D-Star compatible radio. And so far, it doesn't seem that there is any interest on
the part of any of any other company to enter the D-Star field.

So for now it seems that only Icom plans to support D-Star in North America. Because of this, one could assume that prices will likely remain unchanged or even go up. And if that happens it will not be Icom's fault

either. With the weakening US dollar vs. the strengthening Japan Yen, the actual cost for electronic goods made in the western half of the Pacific Rim may very likely see a significant price hike in the months to come -- as will much of everything else made outside of the U.S.A.

For the Amateur Radio Newsline, I'm Burt Hicks, WB6MQV, at the studio in Los Angeles.

--

Oh yes, if you want to get a good visual idea of what this years Dayton Hamvention was like may we recommend that you view two free videos. Both were produced by our friend Joe Eisenberg, K0NEB, and are up on the YouTube dot com website. One is titled All Night Long and the other Joe calls Lean on Me. Just search on YouTube Hamvention 2008 and K0NEB to find them. (ARNewsline(tm))

THE SOCIAL SCENE: HALL OF SCIENCE HAMFEST IN NYC JUNE 8

The Hall of Science Amateur Radio Club Hamfest will be hold June 8th in the New York Hall of Science parking lot. That's in Flushing Meadow Corona Park in Queens, New York. Admission is by donation. Vendor set-up begins at 7:30 a,m. with the doors opening to the public 9 a.m. local Ewastern time. Amenities include ample free parking,, QSL card checking and more. Talk-in is on the 145.270 MHz repeater and requires a 136.5 sub-audible access tone. For more information e-mail Stephen Greenbaum to wb2kdg@arr1.net or visit www.hosarc.org on the world wide web. (Via e-mail)

**

HAM RADIO IN SPACE: CHINA TO LAUNCH NEW HAMSAT IN 2009

AMSAT says that China will likely launch a new ham radio satellite in 2009. The ham radio space agency says that it has received a report from Michael Chen, BD5RV, that indicates the CAS-1 amateur radio bird has completed its IARU frequency coordination and the hardware has been finished.

The payload of CAS-1 will likely include a CW telemetry beacon, a linear transponder, an FM repeater and a digital store and forward transponder. These operations will use 2 meters for uplinks and 70 centimeters for downlinks at 500mW output power.

The satellite is expected to be launched from China into a sun synchronous orbit with a 670 km apogee. According to Chen the CAS-1 team is waiting for another payload to be finished before launch date is officially set. (ANS)

**

HAM RADIO IN SPACE: CALL IT DO-64

AMSAT's Bill Tynan, W3XO has announced that the Delfi C-3 amateur aadio satellite has been issued an OSCAR number. From this point on Delfi-C3 OSCAR-64 or Dutch OSCAR-64 will be known simply as DO-64.

This newest amateur satellite was developed by a team of some 60 students and facility members from various polytechnic schools in The Netherlands. It was successfully launched April, 28th from India aboard a Polar launch vehicle and was successfully commissioned.

Currently DO-64 is transmitting telemetry on the 2 meter amateur band. In addition to its 2 meter downlink, the new bid has an uplink on the 70 cm band. (ANS)

**

HAM RADIO IN SPACE: AN INTERMITTANT AO-16

AO-16 Command Station Mark Hammond, N8MH, says that over the last several days you are likely to have found the AO-16 ham satellite silent. According to Hammond, there appears to be something in the spacecraft shutting down the transmitter after a short, random period of time.

Hammond says that it does not appear to be a battery related issue. Rather current speculation on the problem includes a temperature issue that has reared its ugly head now that the eclipse periods are increasing and the spacecraft internal temperatures are decreasing.

For the moment, ground control stations will manually turn the satellite on and then configure it for voice operations. This is a manual process and command stations are limited to the East coast of the US. Hammond says that only time will tell if the current situation will stay the same, improve, or get worse. (ANS)

**

DX

In DX, word that DL6ZFG will be active portable I-S-Zero from the island of Sardinia until around June 10th. He plans to work all popular modes concentrating on PSK, RTTY, CW and also SSB. Listen out for him mostly on 20, 30 and 40 meters and QSL As directed on the air.

And DL2AAZ, will show up portable V4 using the call 9H3TI from Nevis. He plans on using CW and SSB on 80 through 10 meters through June 15th. QSL via DL2AAZ, either direct or via the bureau.

Also, WA3FPK will be in Rwanda until the 5th of June. He has been issued the callsign 9X0A and plans to be active in his spare time, mainly on 20 meters SSB. QSL via KA1CRP.

Members of the South Flanders DX Activity Group will be active from June 5th to the 9th ON6JUN slash P from the Pegasus Bridge memorial museum. This, as a DX-pedition commemorating World War 2 D-Day landings. Operation will be on all HF bands using CW, SSB, RTTY and PSK. QSL direct or to the

bureau via ON5SD

AA8YH, says via the Ohio Penn DX Newsletter that ne will be returning to Tunisia in mid-November for a 5 week stay. He plans to concentrate on the lower frequency bands is willing to accept skeds from QRP stations, Either on CW or SSB. You can contact him via his \e-mail address listed on QRZ.com.

Lastly, SP9PLK, the club station of the 2nd Mechanized Corps of the Polish Land Forces, will be active as HF9GA from the 2nd to 30th of June. QSL this one via SP9PLK.

(Above from various DX news sources)

**

THAT FINAL ITEM: COME NORTH TO ALASKA IN AUGUST

Finally this week, we all know that there are a lot of good hamfests out there, but very few that put out radio spots designed to invite the public to come on down. Or in this case its come on up. Up to Alaska for the Anchorage Hamfest. Take a listen:

--

Audio only - hear it in the audio version of this newscast downloadable in mp3 form at www.arnewsline.org

--

That's Pete Summers, KL2GY, who is the voice of the Anchorage Hamfests radio spot. And in addition to Pete's contribution, the Anchorage Hamfest will have loads of other activities to make the trek to America's last frontier a memorable outing.

Again the dates are August 1st to the 4th at the Anchorage Sheraton Hotel. And as Pete says, to learn more just take your web browser to www dot akhamfest dot com and be ready for a lot of ham radio fun in America's 49th state. (KL7SP)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Before we go, please note that by the time most of you hear this newscast, the nominating period for the 2008 Newsline Young Ham of the Year Award will have closed. The cutoff was Friday, May 30th at midnight. All nominations are now in the hands of the judges. We should have the name of this years recipient in just a few short weeks.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen,
ZL2BHF, saying 73 from down-under, and we thank you for listening.

Every evening on 3865 here in the northeast US there is what I believe to be a digital broadcaster.
The "noise" is a rasping sound, and it goes on all evening long, steady.
Quite strong.

I know nothing about digital reception. Is there a way to decode this signal, by using my PC sound card and some software?

Rick K2XT

==> HAMS HEED THE CALL WHEN TORNADOES SWEEP THROUGH COLORADO

On Thursday, May 22 at approximately noon MDT, a large tornado touched
down in northern Colorado near the town of Windsor. Windsor, with a
population of nearly 19,000, is located approximately 10 miles southeast
of Fort Collins, and 50 miles north of Denver. According to ARRL
Colorado Section Manager Jeff Ryan, K0RM, initial reports indicated that
there was the possibility of extensive damage. Ryan said that Colorado
ARES District 10 was activated and David Markham, W0CBI, the Colorado
Section Emergency Coordinator, monitored the situation.
```

The funnel cloud, accompanied by golf-ball sized hail, blackened the skies over Windsor as it knocked down power lines, shredded crops in fields outside the city and blasted whole neighborhoods; the southeast side of town was hit the worst by the storm. "It will be a long time before the town recovers from this," Windsor Mayor John Vasquez said.

Ryan said reports indicated the Windsor tornado was just one of several that swept across northern Colorado and part of Wyoming: "The storm resulted in one fatality, and more than 100 people were treated on the scene for some type of injury with another 18 people treated at area hospitals. Damage is widespread and includes homes and business in Weld and Larimer Counties. We also received damage reports from the smaller towns of Gilcrest and Platteville."

The Weld County Sheriff's Office reported that the lone fatality, Oscar Manchester, 52, a US Marine and Vietnam veteran, was killed in a recreational vehicle that was destroyed in the storm at a campground west of Greeley, about 60 miles north of Denver.

Colorado ARES District 10 Emergency Coordinator Randy Long, W0AVV, reported that 31 operators provided communications service to the Emergency Operations Center and Fire Department in Windsor, the Weld County Emergency Operations Center, the Larimer County Emergency Operations Center, the City of Loveland Emergency Operations Center, the Loveland Mobile Command post and two Red Cross shelters.

"On Friday, the town was still without power and remained so until local utilities could complete a survey of electrical transmission lines in the affected area that is expected to take up to 48 hours," Ryan said. "A mandatory evacuation for sections of Windsor is in effect due to gas leaks and downed power lines. The National Guard is on duty and is responsible for escorting emergency responders in and out of the area."

Colorado Governor Bill Ritter ordered the National Guard to aid rescue and cleanup efforts. He visited the town Thursday evening, saying the number of homes damaged was "significant" and declared a state of emergency for Weld County. Representatives from FEMA were on the scene conducting damage assessments. On Monday, President Bush approved Colorado's request for federal disaster aid to help with the costs of the storms and tornadoes, and declared Weld and Larimer Counties federal disaster areas.

On Friday, Markham placed an additional 15 Amateur Radio operators in Larimer and Weld County on standby in anticipation of an overnight shift; he also requested adjacent districts to prepare in support of the ongoing operations if necessary.

Windsor, Fort Collins and Loveland lie in the shadow of the Rocky Mountains, where the Great Plains give way to steep hills. "It's very unusual to see [a tornado like] this by a mountain range. It's kind of a freak thing," said Captain Steve Fleming of the Poudre Fire Authority.

Ryan said that at the peak of the ARES operation, "Colorado ARES District 10 had 55 operators supporting emergency response and relief

efforts in the aftermath of the tornado that touched down near Windsor."

==> AMATEURS ASSIST WITH FLORIDA FIRES

Amateur Radio operators in Brevard County, Florida responded in a support role during a recent spate of wildfires that ravaged the towns of Palm Bay and Malabar. The fires, all of which were deemed "suspicious" by fire authorities, began on Sunday, May 11. Dubbed the "Mother's Day Fires," they burned close to 13,000 acres in southern Brevard County. Located about 25 miles east of Orlando, Brevard County is home to Kennedy Space Center, site of NASA's space shuttle launch area.

John Weatherly, AB4ET, and Clayton Bennett, KA4NHW, manned a 2 meter station in a shelter set up by the American Red Cross. Additionally, the Brevard Emergency Amateur Radio Services (BEARS) donated the use of their mobile command center to public safety agencies. The command vehicle, dubbed BEARS-I, was obtained through a $100,000 grant from the State of Florida. The interior was designed and built by a group of Amateur Radio operators from local Brevard County clubs that are members of BEARS. BEARS-I is outfitted with Brevard County 800 MHz public safety radios and amateur equipment.

BEARS-I was used as a command post in the weeklong operation. The Palm Bay Fire Department, the Palm Bay Police Department, ARES and Florida Power and Light manned the four operating positions. The unit was put in place at Bayside High School when the fires started; it was relocated the next day to the US Air Force tracking station that became the new command center, as well as the staging area for trucks and teams from other counties. BEARS-I was used as a self-contained command center around the clock for over five days

According to official sources, the Mother's Day fires destroyed more than 30 homes with an estimated value of $5.6 million, and damaged almost 250 residences. A man is in custody on three counts of intentional burning of lands after witnesses reported seeing him light several small fires one night that were quickly extinguished. According to authorities, the investigation continues into whether the suspect set all the fires, or if others were involved. -- Some information provided by Jan Heise, K4QD, and Dan Fisher, AI4GK

==> CHINESE OFFICIALS GIVE KUDOS TO AMATEUR RADIO OPERATORS

As disaster recovery efforts continue following the earthquake in the Wenchuan area of China's Sichuan province on May 12, China's Information Office of the State Council reports that the death toll has reached more than 67,000 persons as of May 27. Communications in some of the surrounding areas were cut off, and communications in some other areas experienced network congestion due to drastically increased traffic. According to the Chinese Radio Sports Association (CRSA) -- the Chinese IARU Member-Society -- Chinese government officials and the news media have recognized that when communications failed after the earthquake,

Amateur Radio operators stepped in to provide vital links.

CRSA designated 14.270, 7.050 and 7.060 MHz for emergency communications use during the quake, but these frequencies are now no longer restricted for this use; should a severe aftershock occur, CRSA said it will make the call for them to be kept clear again.

On Monday, May 26, China Central Television (CCTV) reported that, "When all other communication means failed, Amateur Radio operators came out!An Amateur Radio emergency communication network was set up, and one of the commanders, Liu Hu [BG8AAS], called for Amateur Radio operators on air to provide services for disaster relief."

Fan Bin, BA1RB, on behalf of CRSA, said, "Thankfully, one main repeater survived during the earthquake. This repeater provided 100 km coverage to Mianyang. Amateur Radio operators from Chengdu, Shenzhen, He'nan went to the center of the disaster area, set up repeaters in Beichuan County and provided various valuable first hand information from the center."

CRSA officials said they hoped to report more detailed information on the role of Amateur Radio emergency communications in the big earthquake at a later date. In the meantime, Fan said, CRSA acknowledged that the main organizer of local Amateur Radio traffic, Luo Minglin, BY8AA, "continuously coordinated VHF/UHF communications for a 100 km radius from Chengdu, the capital of southwest China's province of Sichuan. More repeaters were set up in both Beichuan and Mianyang -- among the worst hit areas outside the epicenter -- to form an effective Amateur Radio communication network."

Zhang Zhen, BG8DOU, said that right after the earthquake, "Two ham radio operators drove to the center of the earthquake area and had a repeater set up by the morning of May 13. This repeater enabled the transmission of rescue instructions and status reports, and was a main communication channel for public use. The repeater carried communications for the Mayor of Mianzhu City who gave orders to those on the front line rescue and recovery activity."

The CRSA said it appreciates the support given by the Amateur Radio community in helping to keep clear the emergency communication frequencies of 7050 kHz, 7060 kHz and 14270 kHz during the critical period after the earthquake: "Thanks for the cooperation and efforts made by all Amateur Radio societies." The CRSA also acknowledged having received inquiries and the "warm concerns" of Amateur Radio societies worldwide. -- Information provided by Fan Bin, BA1RB, on behalf of CRSA, via IARU Region 3 Disaster Communications Committee Chairman Jim Linton VK3PC

==> ARRL FILES COMMENTS IN TWO MATTERS BEFORE FCC

On Tuesday, May 27, ARRL filed electronic comments concerning two matters that the FCC has under consideration. The first set of comments concerns a company that filed a request for a waiver of Part 90 of the FCC rules; ReconRobotics, an electronics manufacturer, wishes to sell,

and for its public safety customers to use, a robotic device that operates in the 430-448 MHz band. The primary allocation in that portion of the spectrum is United States government radiolocation (military radars). The Amateur Service has an allocation on a secondary basis. The second matter deals with GE Healthcare and their request for allocation of spectrum (as a secondary user) in the 2300 MHz band; the Amateur Service has a primary allocation in a portion of the requested band.

On January 11, 2008, ReconRobotics filed a request with the FCC for a waiver of Part 90 of the Commission's Rules with respect to the Recon Scout, a remote-controlled, maneuverable surveillance robot designed for use in areas that may be too hazardous for human entry. This device can be thrown, dropped or launched into hazardous areas and can provide an operator located a safe distance away with video and audio, along with infrared, biological, chemical, heat, radiation or other data. According to the FCC, ReconRobotics seeks a waiver to permit equipment authorization of the Recon Scout, and its use by state and local law enforcement and firefighting agencies and by security personnel in critical infrastructure industries.

The FCC said a waiver is required to permit licensing of the Recon Scout because "the device operates in the 430-448 MHz band." ReconRobotics asserts that because the Recon Scout operates with 1 W peak power, it is "unlikely to cause interference to these services."

The ARRL contends that "Because [this device] operates on a channelized basis, each of the three channels being six megahertz wide, the necessary bandwidth of the device is apparently close to 6 MHz. [ReconRobotics] asks that it be granted an unspecified series of permanent waivers to allow the marketing and sale to, and use of this device by law enforcement and fire department personnel for public safety applications. The Amateur Service, which has a heavily occupied, secondary allocation in the 420-450 MHz band...would be potentially substantially impacted by grant of these waivers."

The ARRL's comments also state that ReconRobotics "fails to establish that the 420-450 MHz band is the only viable choice and that no other band would be suitable; an obligation of the Petitioner in order to entitle it to a waiver." In requesting the waiver, ARRL asserts that ReconRobotics only claimed, but did not show, prove or demonstrate, that other bands were not suitable for its purposes. In other cases before the FCC as recent as 2006, the Commission denied such waivers, saying, "We do not believe that the public interest requires grant of a waiver merely to accommodate a manufacturer's choice of a specific frequency when others are available."

The ARRL contends, in its comments, that "nothing in the four corners of [ReconRobotics'] request indicates anything that would verify the factual conclusions offered. The waiver request boils down to 'trust us, we have checked into this.'"

The ARRL points out in its comments that there are differing amateur operations throughout the 420-450 MHz band. One of the channels ReconRobotics is requesting use of -- 442-448 MHz -- is used by amateur repeaters (with band plans varying by locality) and also for Amateur television repeater inputs. "These repeater inputs, both for voice and video, are at high locations where line-of-sight to [ReconRobotics] devices should be expected anywhere in the United States. Repeaters in this band are routinely used for emergency communications via amateur Radio for numerous served agencies including FEMA, and so at times when [ReconRobotic's] device may be expected to be used, the repeaters may be expected to be in operation in the same areas," ARRL comments state.

For this reason as well, the ARRL maintains that interference to [the Recon Scout] device may be expected on a regular basis from Amateur Radio operations: "While it is all well and good for [ReconRobotics], a manufacturer, to suggest that it understands that operation of the device would be subject to interference received from licensed users in the band, such interference is not a comforting thought for licensed radio amateurs who could very easily be perceived to be, or held responsible for the failure or malfunction of these analog devices in a given application and the danger to public safety officers who are relying on them. It is also too much to expect that a Public Safety licensee will understand that the use of the device is unpredictable because interference to the device is unpredictable. [ReconRobotics] is correct about one thing: Amateur Radio operators take their relationship with First Responders very seriously. Creating fundamental incompatibility between Public Safety communications and Amateur Radio operations serves no one well at all, and for this reason, [ReconRobotics] should reconfigure its device to operate in a different allocation."

The ARRL urges the FCC to deny the waiver request, "either permanently or even temporarily," and calls on the Commission to require ReconRobotics to "initiate a rulemaking proceeding if it feels that the Part 90 or Part 15 rules governing analog devices are not sufficiently accommodating and should be changed, and could be changed consistent with interference avoidance. Repeatedly granting waivers for analog devices which do not meet the fundamental interference avoidance requirements of the existing rules is bad spectrum management and ill-serves the Amateur Service."

In December 2007, GE Healthcare filed ex parte comments in response to a Notice of Inquiry (NOI) in the pending "MedRadio" proceeding, proposing that the band 2360-2400 MHz be allocated on a secondary basis for "Body Sensor Networks" (BSNs). These systems are apparently to be used for wireless patient monitoring. They are very short-range networks consisting of multiple body-worn sensors and nodes, connected via wireless to nearby hub stations at medical facilities and in homes. The Amateur Radio Service is currently allocated 2390-2400 MHZ on a primary basis.

In its comments, the ARRL states that it does not expect a "significant amount of harmful interference to Amateur operations at 2390-2400 MHz from BSNs." GE Healthcare's proposal, however, makes "erroneous assumptions about Amateur uses in these bands, and the interference potential of the devices to Amateur Radio stations in residential areas is not known."

According to GE Healthcare, they propose an allocation of the entire 2360-2400 MHz band for use of the BSN devices, but the ARRL contends that "in any given area, only 20 MHz of that band would be used. [GE Healthcare's] proposal specifically mentions Amateur Radio and claims that, because the band 2390-2400 MHz is 'designed [sic] for fast scan video, high rate data, packet, control and auxiliary applications' and not weak signal communications, it is well-suited for sharing with the BSN systems."

The ARRL argued that this is a misconception on GE Healthcare's part: "The fact is that there are no limitations on the type of Amateur uses to be made in these bands. The band may in fact be used in some areas for weak signal communications, on a completely unpredictable basis. The uses of this band by radio amateurs, though guided overall by a national band plan, are very much subject to local variation dictated by custom and usage. Weak signal Amateur communications utilize long propagation paths, very low received signal levels, and very high transmitted signal levels. The band is also used for long distance data, voice and television communications using relatively weak received signal levels."

The ARRL, in its comments, said it "is far more concerned" about potential interference to BSNs from licensed Amateur Radio operation in the 2390-2400 MHz band: "The ramifications of radiofrequency interference (RFI) to these systems in terms of danger to medical patients are obvious, and potentially severe." The ARRL contends "that the potential for interference from Amateur Radio operations, which are in this band occasionally itinerant and mobile, but most often fixed in residential areas, to BSNs operated at a patient's residence would be...a problem."

In light of the possibilities of harmful interference, the ARRL requested that the FCC "not proceed with the proposal of GE Healthcare as proposed in the 2390-2400 MHz band."

==> GET READY FOR THE UPCOMING ARRL JUNE VHF QSO PARTY

June is just about here, and according to ARRL Contest Branch Manager Sean Kutzko, KX9X, that means the VHF bands are starting to get some steam. "If you've never experienced the fun of VHF+ operating, the ARRL June VHF QSO Party is a great place to start. With many HF radios now offering at least 6 meter SSB/CW capabilities -- and some offering 2 meters and 70 cm as well -- any amateur with a Technician class license or higher can experience long-haul communication on the VHF bands," he said.

Known as the "Magic Band," 6 meters can be quiet for days at a time, and then suddenly explode with signals when the E layer of the ionosphere cooperates. There's no guaranteed way to predict when 6 meters opens, which is why the propagation mode is called "Sporadic-E." When 6 meters opens, contacts several hundred miles away can be made with relatively modest equipment; 50 W and a simple dipole antenna can do wonders during a good opening.

When operating on VHF, Kutzko said that your Maidenhead grid square is the common geographical information exchanged. For complete information on grid squares and how to tell what grid square you are in, visit the ARRL's web site <http://www.arrl.org/locate/gridinfo.html>.

Kutzko advises that there are a few things to know about operating on 6 meters: In the US and Canada, there is a "calling frequency" on 50.125 MHz USB. Many stations monitor this frequency to listen for band openings. Stations can call CQ on the calling frequency, and if somebody answers, the stations will find a new frequency on which to conduct their QSO. It is considered poor etiquette to monopolize the calling frequency for QSOs.

Most SSB activity will take place between 50.125 MHz and 50.250 MHz. If conditions are exceptional, Kutzko said you may hear signals above 50.250: "CW signals can be found from 50.100 MHz to 50.080 or so. The frequencies between 50.100 and 50.125 MHz are a 'DX Window,' meaning it is reserved for QSOs between W/VE and DX stations. Please do not make stateside-to-stateside QSOs in the DX Window."

Kutzko said that getting on 6 meters is easy: "A dipole for 6 meters is only 9 feet, 4 inches long and is an easy construction project. Try to get the dipole in the air as high as possible, but even 15 feet off the ground will make some QSOs. If you have an antenna tuner that can handle 6 meters, you can try loading up another of your antennas on 6 meters with reasonable success."

Because VHF+ antennas are relatively small, Kutzko said that many amateurs operate from portable locations, such as a hilltop or a campground. Others operate the contest as a "rover," operating from their car or truck while transmitting from multiple grid squares over the contest period. "Tracking rovers during the contest is almost as much fun as the contest itself," he said.

The ARRL June VHF QSO Party runs from 1800 UTC Saturday, June 14-0300 UTC Monday, June 16. Be sure to use those extra bands on your transceiver and get in on the fun you've been missing on 6 meters and up! For more information on this contest, please be sure to check out the Contest Rules <http://www.arrl.org/contests/rules/2008/june-vhf.html>.

==> FIRST ARRL BOOK PUBLISHED IN CHINA

The first of several ARRL books has been translated and published by Posts and Telecommunications Press (PTPress) of Beijing, People's Republic of China. "Getting Started with Ham Radio" by QST Editor Steve

Ford, WB8IMY, will be available for purchase in China next month. Other ARRL books to be translated and published in the PRC include "The ARRL Handbook," "ARRL Antenna Book," "Experimental Methods in RF Design," "Understanding Basic Electronics" and "Ham Radio on the Move."

Posts and Telecommunications Press is one of the largest Chinese print and electronic media publishers. It is a specialized publishing house operating under the management of the Ministry of Information Industry. At present, PTPress annually publishes 3600 book titles in 10 categories such as communications, computers, electronics and electrical engineering technology.

"Getting Started with Ham Radio" was translated and adapted for its Chinese audience by Zhang Hong, BG1FPX.

==>SOLAR UPDATE

Tad "My Sun sets to raise again" Cook, K7RA, this week reports: This week we saw only one sunspot, number 997, and only on Memorial Day, May 26. Alas, this was another sunspot left over from fading Solar Cycle 23 and its appearance was very brief. One day it weakly emerged, it quickly faded from view. The previous five days were spotless; spots appeared on the five days prior to that, and previous to those spotted days were 10 days of no spots. Sunspot numbers for May 22-28 were 0, 0, 0, 0, 12, 0 and 0 with a mean of 1.7. The 10.7 cm flux was 69.3, 67.8, 68.5, 68.3, 68, 67.9 and 67.8 with a mean of 68.2. Estimated planetary A indices were 9, 10, 7, 6, 4, 3 and 12 with a mean of 7.3. Estimated mid-latitude A indices were 7, 7, 4, 7, 3, 2 and 10, with a mean of 5.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is Kids Roundup on May 31-June 1 and the RSGB 80 Meter Club Championship (Data) is June 2. Next weekend, the NCCC Sprint Ladder and the Digital Pentathlon are both June 6, and the Wake-Up! QRP Sprint is on June 7. On June 7-8, look for the DigiFest, the SEANET Contest, the UKSMG Summer Contest, RSGB National Field Day, IARU Region 1 Field Day (CW) and the Alabama QSO Party. The SKCC Weekend Sprintathon is June 8. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meters Club Championship (CW) are both June 11. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 8, 2008, for these online course sessions beginning on Friday, June 20, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* IARU Officials Meet in Newington: IARU President Larry Price, W4RA; Vice President Tim Ellam, VE6SH, and Secretary David Sumner, K1ZZ, with assistance from ARRL Chief Technology Officer Paul Rinaldo, W4RI, met in Newington this week. "We are preparing documentation to be discussed at the annual Administrative Council meeting, which will be held in Germany shortly before the Friedrichshafen Ham Radio exhibition in late June," said Sumner. ARRL staff members also took the chance to say goodbye to Rinaldo who is retiring after 25 years on the ARRL staff. "I look back on the great association over the past 25 years - in fact, earlier than that as a volunteer - and I hope to still be around," Rinaldo said. "I'm going to stay involved with the IARU and go to some meetings in Geneva this October."

* New Name, Look for ARRL Contest E-Letter: The ARRL Contest Rate Sheet is getting a new look and name this week. Now known as the "ARRL Contest Update -- News and Techniques for the Active Operator," the biweekly e-letter geared toward contesters will be sent out in a combined HTML and text-only format (readers who prefer text-only will still be able to read it that way using most e-mail clients). The HTML format will present a more attractive newsletter that is easier to read, and photos and graphics will also be included for the first time. According to Contest Update Editor H. Ward Silver, N0AX, "We're going to start slow with a limited amount of HTML snazziness and a few photos. Please bear with us during the growing pain period and soon the HTML version will seem like the old friend that the text-only version has become." To subscribe to the ARRL Contest Update, please visit the ARRL Contest Update Web page <http://www.arrl.org/contests/update/about.html#get>.

* National Hurricane Center's WX4NHC Sets On-The-Air Station Test: The annual WX4NHC <http://www.wx4nhc.org/> On-the-Air Station Test from the

National Hurricane Center (NHC) in Miami takes place Saturday, May 31, 1300-2100 UTC. "The purpose of this annual Station Test is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible. This is not a contest or simulated hurricane exercise. New equipment and software will be tested, and some operator training will also be conducted," says WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R. He adds that WX4NHC also will be testing new computers and software as well conducting operator training. WX4NHC will be on the air on HF, VHF and UHF, plus 2 and 30 meter APRS. Suggested SSB frequencies are 3.950, 7.268, 14.325, 21.325 and 28.525 MHz, +/-QRM; WX4NHC reports that they will mostly be on 14.325 MHz and will make announcements when they change frequencies. WX4NHC also will be on the VoIP Hurricane Net 1700-1900 UTC (IRLP node 9219/EchoLink WX-TALK Conference) and on South Florida area VHF/UHF repeaters and simplex. Stations working WX4NHC exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," "rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form. QSL to WD4R and include a self-addressed, stamped envelope. Do not send cards to the NHC. Due to security measures, no visitors will be allowed at NHC during the test.

* US Power Squadron to Hold Special Event at W1AW: Members of the United States Power Squadrons Amateur Radio Club will operate celebrate the National Safe Boating Council's Safe Boating Week with a Special Event at, W1AW, the Hiram Percy Maxim Memorial Station June 7 and 8, 8 AM-8 PM (EDT) on both days. USPS operated from the station in 2006 and say they enthusiastically anticipate this return to Amateur Radio's flagship station. USPS plans on operating on or near W1AW's regular frequencies: CW -- 1817.5, 3581.5, 7047.5, 14047.5, 18097.5, 21067.5 and 28067.5 kHz; SSB - 1855, 3990, 7290, 14290, 18160, 21390 and 28590 kHz. A special QSL card is in the works and can be received by mailing a self-addressed, stamped envelope to W1AW.

* New Russian Satellite in Orbit: A Russian rocket launched from Plesetsk on May 23 carried a number of payloads to orbit, including a new Amateur Radio satellite named Yubileiny -- Russian for jubilee -- since christened Radio Sputnik 30 (RS-30). Operational details are vague at this time. Amateurs throughout the world report receiving signals at 435.315 and 435.215 MHz; some report reception of CW telemetry while others report what appear to be image transmissions from the satellite. RS-30 is orbiting at a maximum altitude of 1500 km, creating a substantial communications footprint below. The satellite will broadcast audio and video about the history of the Soviet and Russian space programs, as well as signals imitating those broadcast by Sputnik I in 1957. According to the satellite's launch team, "The motive for development of the Yubileiny small spacecraft was the 50th anniversary of the first space satellite. With the help of that satellite, the new space systems and equipment are expected to get flight qualification, and radio-amateurs all over the world will be able to receive information on the history of space development and domestic cosmonautics achievements."

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL

cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Try:
http://n1su.com/windrm/ (ham-oriented)
http://drm.sourceforge.net/ (broadcast-oriented)

The wide-bandwidth (broadcast-oriented) DRM systems may require that
you have access to a low-frequency-IF version of the signal, or tap
out a 455 kHz IF and mix it down to around 10-15 kHz.

I believe that the narrow-bandwidth (ham-oriented) versions could use
the audio output from a SSB receiver.

In theory, yes, the teacher doesn't have to be a ham.

But in practice, I think a teacher who was that interested in having ham radio in the school would *be* a ham, if for no other reason than it makes the whole thing easier.

--

A lot depends, too, on what level of involvement ham radio is to be in the school. For example, in increasing order of involvement:

1) Books, magazines and other info on ham radio could be provided to the school libraries.

2) Local amateurs could give a presentation/demonstration at an assembly, student activity day, etc. This would simply say "Here's what ham radio is, what hams do, what it takes to become one.." etc.

3) Ham radio could be introduced as an extra-curricular activity, same as computer clubs, robotics clubs, etc. (The local high school has a computer club that focuses on rehabbing older computers for use by students who can't afford their own, and a robotics club that designs and builds machines for competition).

4) Ham radio could be part of the curriculum, integrated into the math, technology, communications and geography parts.

IMHO the bell-the-cat question at all levels is: Who's going to do the work, and pay the costs?

562. Nifty Trick - AM Antenna Booster

Newsgroup: rec.radio.amateur.moderated
Date: 2008-06-01 17:06:14 UTC
From: David Coyle <davidremovecoylethis@sbcglobal.net>
Message-ID: <Fbz0k.4069$jl5.3003@flpi148.ffdc.sbc.com>
Source record: 2833

I know next to nothing about radio, but I wanted to share something (you guys probably already know about, but I was amazed).

I have a small Pogo pocket radio that will record AM and FM to MP3 files, and the problem is that the AM antenna is weak. I started looking on the internet for antenna boosters and enjoyed the antenna technology enough to try and make my own booster that operates on the principle of a resonating oscillator placed close to the Pogo ferrite antenna. This is just a tuning circuit with an adjustable capacitor and induction coil. Well I tried to be careful making the home-made coil and capacitor but I just did not get it right. Nonetheless it started me thinking that I had the same circuit in an old transistor radio. So I took the old radio (ferrite antenna) and tuned it to the station I wanted and placed it head-to head against the Pogo radio. The Pogo reception was boosted dramatically. So I do not need to buy a $50 antenna booster - a cheap $10 second radio will do the same thing quite well, and the second radio does not even have to be on.

Well, maybe this will give a few second hand radios a second life.

The FM voice is not part of the D-Star specs. It is built into the
ICOM hardware. The IC-2820 dual-band dual-channel mobile comes
"D-Star ready" for $600 and the add-on D-Star module is another $200+.

I'd just as soon wait for the prices to come down.

According to what I've heard, that's a "hot button" topic, but Bill
Cross of the FCC (an active ham) said at Dayton that he applies the
"duck test" to the D-Star repeaters (making them eligible for
automatic control).

That makes good sense to me.

As I understand it, some D-Star advocates are claiming that a D-Star repeater isn't a repeater, because the regs state that a repeater retransmits the incoming signal "instantaneously", and the packet delay in a D-Star system makes it not-instantaneous... that it's fundamentally a store-and-forward system, more like a BBS (albeit with a very short storage time).

That same line of thought (if valid) would seem to apply to a fairly high percentage of ham-radio analog repeaters on the air today. It's quite common to have a digital or bucket-brigate delay device in the receiver audio path, with the analog audio being presented to the repeater controller and transmitter some time (up to tens of milliseconds) after it was actually demodulated by the receiver. This can help reduce the chopping-off of the first part of the first syllable, and allows the transmitter to be un-keyed at the end of the transmission before the beginning of the squelch-tail noise burst gets out of the delay pipeline.

I can't recall hearing anyone argue that an FM analog repeater with an analog bucket-brigade (or even ADPCM digital) audio delay circuit was magically "not a repeater" because the audio retransmission was not "instantaneous". If the D-Star not-a-repeater proponents were to win their case, it might be a *very* pyrrhic victory, as analog repeater owners might also qualify to move into non-repeater frequency segments. Sauce for the goose...

Right. My thoughts on the whole thing are that with the Bizarre
"repeater that isn't a repeater" argument they couldn't run FM analog
because it would turn the "repeater that isn't a repeater into a
repeater that is a repeater."

Now repeat that ten times real fast! ;^)

Our repeater system uses several polling receivers at different sites.
(6 or 7 IIRC) The recievers transmit their received signals to the main
site. The main repeater site determines which is the strongest signal,
and sends that one through to the main repeater transmitter.

As you can imagine, there is some delay there too. Maybe 250 milliseconds.

One of the biggest problems putting up a repeater these days is that many areas are just full. There's no room at the Inn. And the area in which a D-Star is likely to do best is in those crowded areas. So they tried to do an end run around the issue. Without a lot of thought.

Seems like we have a nice patch of bandwidth between 2 meters and 440 that is a bit underutilized?

Depends on the definition of "full" or the definition of "crowded".

I live in a metropolitan area in which there are no VHF pairs available for assignment. By some definition that might mean that the spectrum is "full" or "crowded".

But you could shoot off a cannon on 2M most of the time and it wouldn't hit a soul. Nobody. Not a signal to be heard. Some days you can scan every channel in sequence for hours on end with not a peep heard. Then go to each QRG in sequence and transmit "K0HB LISTENING". Nobody home.

I travel a lot, to large cities like Chicago, Milwaukee, St. Louis, Tucson, Kansas City, Indianapolis, Detroit, OKC, DFW, Tucson, Phoenix, Denver, El Paso/Las Cruces. It's the same everywhere. Just a scattering of signals on the bands, but EVERY PAIR spoken for.

The NFCC needs to quit being the lapdog of the repeater owners, and do some spectrum management housecleaning.

Before Bill Cross does.

568. Amateur Radio Newsline" Report 1608 - June 6, 2008

Amateur Radio Newsline" Report 1608 - June 6, 2008

Amateur Radio Newsline report number 1608 with a release date of Friday, June 6th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The FCC seems to challenge coordinators over paper repeaters. Amateur radio is honored for it support of the National Hurricane Center. Portugal gives its hams the 70 MHz band. The Shelby Hamfest commits to 5 years at its new home and Riley Hollingsworth tells hams that the world is listening. Find out the details on Amateur Radio Newsline" report number 1608 coming your way right now.

(Billboard Cart Here)

**

FM AND REPEATERS: TIME TO DO AWAY WITH PAPER REPEATERS

Is the FCC telling the coordination community that its time for them to act against paper repeaters? We are talking about repeaters that have been coordinated to a channel pair but have never come on the air. Or repeaters that were once operational but have been silent for a long time. Speaking at the recent Dayton Hamvention, it appears as if the FCC's Bill Cross, W3TN, has challenged the nations coordination community to make the paper repeaters go away:

--

Cross: Coordinators also need to be sure that the systems that they have coordinated are still using the channels before they tell you that your system cannot be coordinated. From what I have heard, in some areas of the country there are an awful lot of paper repeaters and an awful lot of out of date coordination's.

--

One of the reasons that paper repeaters exist at all has been the fear on the part of coordinators of being sued by the person holding the channel allocation whether a repeater exists or not. This, if they pull a coordination and give the channel pair to the next group waiting in line.

For those unaware, those hams providing repeater coordination services are volunteers. Up until now they have not been willing to risk their homes and life savings just to make the point before a judge and jury that they have the power to tell the owner of a non existent repeater to go away. Now however, Bill Cross words might be the impetus to start changing this. (ARNewsline")

**

FM AND REPEATERS: COORDINATORS BE CREATIVE

Doing away with paper repeaters will help open up channel pairs in some geographic regions, but there are others where all the channels in all of the repeater subbands are truly in use. What do you do in those cases? The FCC's Bill Cross says to use a bit of good old ham radio ingenuity:

--

Cross: "Coordinators can create more channels by, for example, requiring as a condition of coordination that the repeater that a narrower than 25 kHz bandwidth (on UHF) be used, that narrower guard bands be used or that a repeater not be installed on a mountaintop where it ties up a channel pair for half the area of a state,"

--

Cross also said that there are some instances where coordination is not necessary.

--

Cross: "Coordination only becomes relevant if there is interference. If you can find a channel that is unused, the rules permit you to put a repeater on it. If the repeater is coordinated to a closed repeater and you can use it without causing interference (to that closed repeater), you may. Coordination does not establish a squatters right to a frequency or a right to exclude others.

--

Does this mean that the FCC wants to put an end to closed and private repeaters? Well, not really. When questioned about that remark by someone in the audience, Cross went back to the FCC rules and found:

--

Cross: "Its 97.205(e). Limiting the use of a repeater to only certain user stations is permissible. Now you will not find the term closed repeater anywhere in Part 97. Thats a term that you have developed. This rule was adopted at the request of the amateur community so that a repeater owner, operator or control operator would be able to tell a particular licensee to stay off the repeater.

"Usually, our experience has been that comes as a last resort with someone whose just misbehaving and carrying on baiting people. Making unidentified transmissions and other thing that are in the category of totally obnoxious. And as a group or club, they don't want that person on the repeater. So, in the rule making proceeding the comments came in and said that we need to be able to have some kind of authority to tell someone to stay off the repeater. This rule gives you that authority."

--

What appears evident is that there is a very sharp difference of opinion between the way the ham community views closed and private repeaters and the legalistic approach of the FCC.

The FCC views 97.205(e) as an enforcement tool. Those who have run closed and private repeaters long before that rule came about, or those who want to establish one now, have seized on it to justify their exclusivity of a chosen user base. And it is quite likely that trying to prove that this rule does not codify closed and private repeaters would lead to a very costly federal court fight between opposing repeater owner operators. A legal battle that would make a few lawyers rather wealthy and likely bankrupt everyone else involved.

Also, thumbing through a recent ARRL Repeater Directory shows that with the exception of 440 MHz in Southern California, that nationally closed and private repeaters make up only about 1 or 2 percent of all the nations machines. So while the concept of closed and private repeaters is a hot button topic with many hams, the reality is that their impact on channel space availability is minimal at best. (ARNewsline")

**

RESCUE RADIO: NATIONAL HURRICANE CENTER DIRECTOR PRAISES HAMS DURING ABBUAL COMMUNICATIONS TEST

On Saturday May 31, members of the Voice Over Internet Protocol or VoIP Weather Net supported the annual WX4HNC communications test from the National Hurricane Center in Miami, Florida. The Voice Over Internet Protocol Weather net has a long history of supporting the Hurricane Center by sharing reports collected over the Echolink and Internet Radio Linking Project. And this year the centers Director, Bill Read, KB5FYA, took time out to thank the hams who devote them selves to this ongoing life saving project:

--

Read: "CQ all Amateur Radio Operators. This is Bill Read, KB5FYA, Director of the National Hurricane Center.

We all know how important it is to maintain communications during a hurricane to relay our Hurricane Warnings to those in the affected area which may have no other means to receive this vital information.

We are also very appreciative for the surface reports from those in the storm which add to our database and help our Forecasters better visualize what is actually happening at the ground level in real time. As our own Ham Radio Station, WX4NHC, celebrates it's 28th year of volunteer service at The National Hurricane Center, we extend our

thanks to all ham radio operators that continue to support our mission to help save lives.

Thank you and 73. This is KB5FYA at WX4NHC, National Hurricane Center, Miami"

--

In addition to the Voice Over Internet Protocol links, WX4HNC operational on the high frequency bands close to 3.950, 7.268, 14.325, 21.325, and 28.525 MHz. from 1 p.m. and 3 p.m. Eastern Time during the test. Stations desiring a QSL card should send their request with a self-addressed stamped envelope to Julio Ripoll, WD4R, rather than direct to the Hurricane Center. Those wanting additional information about the Voice Over Internet Protocol Weather Net should take their web browser to www.voipwx.net (KC5FM)

**

PUBLIC SERVICE: HAMS ASKED TO ASSIST CALIFORNIA ELECTION

According to the Sacramento Bee newspaper, ham radio was pressed into service to provide a communications system in sparsely populated El Dorado County during last Tuesday's state wide California election.

According to the newspaper, despite the proliferation of cellular telephones, about 40 percent of the El Dorado County's 1,790 square miles don't have cellular service. The terrain is a mix of sparsely populated open range, thickly wooded hills and hard-to-reach canyons. As such, it makes little economic sense for cellular telephone companies to provide service into the area. Unfortunately come election day some polling places in the largely rural county have had problems maintaining lines of communication, leaving poll workers isolated because there are not even wire-line telephones at these sites.

So the county elections office asked local radio amateurs to provide a communications network that would function at polling sites where the cellular telephones and other radio systems might not. At airtime the extent of the involvement in election communications network by radio amateurs is not known. The entire story is on-line at http://www.sacbee.com/101/story/976114.html (Sacramento Bee)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WA3PBD repeater of the Two Rivers Amateur Radio Club serving the great state of Pennsylvania.

(5 sec pause here)

**

WORLDBEAT - PORTUGAL: HAMS GET LIMITED USE OF 70 MHZ

Portugal has granted its ham community limited access to the European 70 MHz band. The nations telecommunications regulator has announced that two sub bands from 70.167 to 70.212.5 MHz and 70.237.5 to 70.287.5 MHz are available for a limited time to the amateur community at 100 watts effective radiated power. Portuguese hams will operate 70 Mhz on a secondary, non-interference basis with other services. Also, they are not guaranteed protection against interference from other licensed stations operating on the band. The 70 MHz band is an ITU Region One only

allocation. (Southgate)

**

RESCUE RADIO: AMATEURS ASSIST WITH FLORIDA FIRES

The ARRL reports that hams have been busy in recent weeks as tornadoes blew across Colorado and wildfires devastated parts of Florida. First to the South-East where amateur radio operators in Brevard County, Florida responded in a support role. This, during a recent series of wildfires that ravaged the towns of Palm Bay and Malabar. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

The fires, all of which were deemed suspicious began on Sunday, May 11th. Dubbed the "Mother's Day Fires," they burned close to 13,000 acres in southern Brevard County in an area about 25 miles east of Orlando.

According to the ARRL Letter, John Weatherly, AB4ET, and Clayton Bennett, KA4NHW, manned a 2 meter station in a shelter set up by the American Red Cross. Additionally, the Brevard Emergency Amateur Radio Services group donated the use of their mobile unit to public safety agencies. It was pressed into service as a command post in the weeklong operation.

The Palm Bay Fire Department, the Palm Bay Police Department, ARES and Florida Power and Light manned the units four operating positions which was initially dispatched to a local high school. It was later relocated to the nearby US Air Force tracking station that became the new command center, as well as the staging area for trucks and teams from other counties. Hams remained on alert until the fires were contained.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting.

--

According to official sources, the Mother's Day fires destroyed more than 30 homes and damaged almost 250 others with an estimated value of $5.6 million. A man is in custody on three counts of intentional burning of lands after witnesses reported seeing him light several small fires that were quickly extinguished. (ARRL, published news reports)

**

RESCUE RADIO: HAMS ASSIST AS TORNADOES SWEEP THROUGH COLORADO

Then on Thursday, May 22nd the ARRL reports that hams sprang to the call when a large tornado touched down in northern Colorado near the town of Windsor. Thats about 50 miles north of Denver. Amateur Radio Newsline's Don Carlson, KQ6FM is here with the details:

--

According to Colorado Section Manager Jeff Ryan, ARES District 10 was activated with Colorado Section Manager David Markham, W0CBI, monitoring

the situation. A funnel cloud, accompanied by golf-ball sized hail, blackened the skies over Windsor as it knocked down power lines, shredded crops in fields outside the city and blasted whole neighborhoods. The southeast side of Windsor was the worst hit by the storm.

Colorado ARES District 10 Emergency Coordinator Randy Long, W0AVV, reported that 31 operators provided communications service to the Emergency Operations Center and Fire Department in Windsor, the Weld County Emergency Operations Center, the Larimer County Emergency Operations Center, the City of Loveland Emergency Operations Center, the Loveland Mobile Command post and two Red Cross shelters.

Friday, May 23rd Markham placed an additional 15 Amateur Radio operators in Larimer and Weld County on standby in anticipation of an overnight shift. He also requested adjacent districts to prepare in support of the ongoing operations if necessary. We will have more on this story in a future Amateur Radio Newsline report.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

News reports say that the storm resulted in one fatality, with over a hundred others injured and treated on the scene. Another 18 were temporarily hospitalized. (ARRL, published news reports)

**

ENFORCEMENT: $17,000 FINE AFFIRMED TO UNLICENSED BOSTON BROADCASTER

Turning to enforcement news. the FCC has issued a monetary forfeiture in the amount of $17,000 to Charles Clemons. This, for operating an unlicensed radio transmitter on the frequency 106.1 MHz in Boston, Massachusetts and for failing to permit a station inspection.

This past February 29th the Commissions Boston Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $17,000 to Clemons after tracing the unlicensed operation to him. To date, Clemons has not filed a response to the N-A-L or paid the proposed forfeiture. Based on the information before it the FCC has now affirmed the $17,000 fine and ordered that Clemons pay the amount within the time frame specified by law. (FCC)

**

ENFORCEMENT: FLORIDA CB'ER FINED FOR OVER POWER OPERATION

A Florida C-B operator has been fined $10,000 but will only have to pay $350. Amateur Radio Newsline's Jim Meachen, ZL2BHF, has the details:

--

The FCC has issued a monetary forfeiture in the amount of three hundred fifty dollars to Florida C-B operator Richard Ross. This, for willful and repeated violation of section 301 of the Communications involving the operation of an unauthorized C-Bradio transmitter.

According to a Commission news release, On August 16, 2007, agents from the Tampa Office inspected RossCB station to confirm that it was in compliance with the rules. They found that RossCB radio station included a CB transmitter and two linear amplifiers. The agents measured the power of the amplifiers combined power output and found the devices had the capability to boost the power of the station to several hundred times the authorized power level.

On March 31, 2008, the Tampa Office issued a Notice of Apparent Liability for Forfeiture to Mr. Ross in the amount of ten thousand dollars. Ross submitted a response to the NAL requesting cancellation of the proposed forfeiture. He asserted financial hardship and supplied the FCC with documentation to back up his claim. After examining the financial documentation submitted by Ross, it decided to reduce the forfeiture to $350.

--

Ross was given the usual 30 days to pay or to file a further appeal. (FCC)

**

RADIO LAW: CHP POSITION ON THE "HANDS-FREE" WIRELESS TELEPHONE LAWS

Some good news from the California Highway Patrol. This, for hams worried about being stopped for using their push-t-talk radio gear without hands free devices once the states new cellular telephone law takes effect on July 1st.

In a letter to several hams and authenticated by the C-G-C Communicator newsletter, Commander Fran Clader of the patrols Office of Media Relations writes -- and we quote:

"The new cell phone laws involve only wireless telephones. They do not concern radios such as your Amateur Radios, unless they are also wireless telephones.

"Again, the law only applies to wireless telephones.

"Thanks for your inquiry. If you have any further questions, please give us a call."

That said, Commander Clader does have some sound advice for anyone driving a car and operating any sort of accessory. She says -- and again we quote:

" All motorists are strongly encouraged to operate a motor vehicle safely, paying attention to their safe operation of the vehicle, the changing road and weather conditions and the actions or anticipated actions of other drivers."

Words to live by that can keep you alive, no matter where you live. (CGC, ARNewsline)

**

RADIO BUSINESS: A VX-8R UPDATE

And speaking about hands free, thats something we missed in last weeks mention of the new Yaesu VX-8R handheld. It seems as if the VX-8R is the first-ever Blue Tooth capable H-T for the amateur radio market. What this means is that with the optional BU-1 and BH-1 or BH-2 add-ons, you can operate the VX-8R hands free. This is especially handy when operating mobile as more and more states pass hands-free cellphone laws. Vertex Standard says that it hopes to have the Yaesu VX-8R available by July. (Yaesu)

**

THE SOCIAL SCENE: SHELBY COMITS TO FIVE YEARS AWAY FROM SHELBY

The Shelby Hamfest is holding onto its name, but for at least five years the amateur radio event will have a new home at Biggerstaff Park in Gaston County, North Carolina.

The Shelby Amateur Radio Club had already booked Biggerstaff Park, off U.S. 321 for the event this August. This, after failing to reach an agreement with those who run its longtime home Cleveland County Fairgrounds in Shelby.

Now, the club approved a commitment with Gaston County to hold Hamfest there for five years. Not only that, but Hamfest organizer Robbie Hamrick said Gaston County could become a permanent home for the event.

In a statement, Hamrich said that the hamfest will be there at least five years and probably longer. He says that Biggerstaff Park is a beautiful place that has room for the hamfest to grow.

The Shelby Hamfest has been a Cleveland County tradition for the past 50 years, but an un-reconcilable dispute between the local fairgrounds commission and the Shelby club lead to what will likely be a permanent move several miles to a new location in a different county. (Cleveland County Star)

HAM HAPPENINGS: INTERNATIONAL LIGHTHOUSE WEEKEND

Registrations for the International Lighthouse and Lightship Weekend are now being made at http://illw.net. The event is always held on the 3rd full weekend in August starting at 00:01 UTC on Saturday running through 23:59 UTC on Sunday.

There are some interesting video clips on YouTube that give an idea of the history of the event and what it's like to operate from a lighthouse. Use the YouTube on-site search engine and the search argument International

Lighthouse and Lightship Weekend to find them. (Southgate)

NAMES IN THE NEWS: VE7DXG TO HEAD RAC VHF/UHF PLANNING COMMITTEE

Some names in the news. First to the North where Radio Amateurs of Canada has named Gabor Horvath VE7DXG of Duncan, British Columbia, as Chair of the organizations VHF/UHF Bandplanning Committee. The Committee's role is to make recommendations to the Board of Directors on how amateur radio spectrum between 30MHz and 2GHz is divided among the various modes and techniques employed by Canadian radio amateurs. Horvath succeeds Graham Ide, VE3BYT, of Ottawa, Ontario, in this position. Ide had resigned as Chair of the committee back in 2007. (RAC)

**

NAMES IN THE NEWS: NEWSLINE'S EVI SIMONS - ENGAGED

And some wonderful news to report about one of the members on the Newsline Family. Reporter Evi Simons has announced her engagement to Michael Dworkis. The two plan to wed on Sunday, July 6th in Woodbury, New York. In Addition to her work on Amateur Radio Newsline, Evi is an accomplished voice actor and announcer. She is also a trained non-linear video editor with credits that include Makor League Baseball on-line. Anyone wishing to send congratulatory messages to Evi and Michael can do so using our regular newsline e-mail address and we will forward them on to the young couple. (ARNewsline")

RADIO WAVES: SOLAR CYCLE DELAYED A YEAR

The next 11-year cycle of solar storms will most likely start next March and peak in late 2011 or mid-2012. Thats up to a year later than expected according to a forecast issued by NOAAs Space Environment Center in coordination with an international panel of solar experts. The complete story is at www.swpc.noaa.gov/SolarCycle/...ssRelease.html (NOAA, QRZ.COM))

**

RADIO IN SPACE: MARS LANDER WEBSITE HACKED

The website for the new Phoenix Mars Lander has been hacked. A spokesperson for the Phoenix Mars Lander mission says a hacker took over the mission's public Web site during the wee hours of May 31st and changed its lead news story. Sara Hammond says a mission update posted Friday May 30th was replaced with a hacker's signature and a link redirecting visitors to an overseas Web site. The Mars Lander vehicle touched down on the Red Planet on Sunday, May 25th to search for traces of organic compounds that are the basic building blocks of life. The site is on-line at http://phoenix.lpl.arizona.edu/ (Published reports)

**

RADIO IN SPACE: HRISE PHOTGRAPHS MARS LANDER LANDING

A camera abroad a U-S satellite in orbit around Mars caught NASA's Phoenix Mars Lander suspended from its parachute during the lander's successful arrival at the Red Planet on Sunday, May 25th. The image radioed back to Earth from the High Resolution Imaging Science Experiment on NASA's Mars Reconnaissance Orbiter marks the first time ever one spacecraft has photographed another one in the act of landing on another planet. (Science On-Line)

WORLDBEAT - THAILAND: NSS LICENSING CLASS HELD

Andaman News NBT Radio reports on a recent huge gathering of prospective ham radio operators in Phuket, Thailand. The activity was co-hosted by the Phuket Amateur Radio Association and the Telecommunication club. It was aimed at extending basic amateur radio users to young people and other interested parties.

Students from Phuket and near by provinces attended a workshop training where they were taught a code of conduct, regulations, manners for communication as well as theory on technical aspects for communication radio. They then sat for a test for basic amateur radio in that nation.

According to the Andaman news report, in the past the amateur radio operators have played important roles in back up communications in time of disaster or when other communication systems have failed. The 2004 Tsunami incident was a good example where these radio operators stepped in and played major roles.

At present over 10,000 radio amateurs can be called out as a communication network through out Thailand. (Southgate)

**

WORLDBEAT - GERMANY: HILBERLING DONATES $14000 PT-8000 RADIO TO DARC

Germany's Hilberling Company has donated first serial numbered Hilberling PT-8000 High Frequency through VHF transceiver to that nations national ham radio society. The Deutscher Amateur Radio Club says that it will set up in the headquarters station at Baunatal. Among other things it will be used for transmitting the DL-news bulletin every Thursday night at 17:30 UTC.

The Hilberling PT-8000 is a high end DSP-transceiver that covers the high frequency bands as well as both 6 and 2 meters. In the United States these radios sell for close to $14,000 and are a direct competitor to the Icom IC-7800 and Yaesu FTDX 9000 from Vertex-Standard. But unlike the Icom and Yaesu entries, the Hilberling can be color coordinated to your station as its available in red, blue, charcoal grey.

The presentation was made on Tuesday, May 27th. Hans Hilberling, DK7LG, Klaus Lohmann, DK7XL, and Jan Hauschildt of Hilberling represented the company at the ceremony where the brand new transceiver was handed off to the Deutscher Amateur Radio Club on permanent loan. (Southgate)

WORLDBAT - IRELAND: TWO NEW REPEATERS IN DONEGAL

Two new repeaters are on the air from Donegal, Ireland. The 2meter repeater is EI2IPG and operates on the channel pair of 145.1125 in 145.7125 MHz with 67Hz CTCSS or 1750Hz tone for access. The 10 meter system is E-I-Zero-I-P-G on 29.580 in and 29.680 MHz out. It also requires a 67Hz CTCSS for access. Both repeaters are connected via the EchoLink system.

Steve Homer, EI2GYB, who is the Repeater Keeper says that because there have not yet been any users through the 10meter repeater that the sponsors will be giving out a certificate to the first 5 people who work through it. In Ireland and the U-K a Repeater Keeper is similar to a system trustee here in the U-S-A. More about the systems is on-line at www.echoireland.com.

Steve also tells us that Amateur Radio Newsline is played weekly on both of the new repeaters, so a big shout out to all of our new friends in the Donegal Ireland repeaters and welcome to the ever expanding world-wide Amateur Radio Newsline family. (EI2GYB)

**

DX

In D-X, word that Operators JE3NJZ and JA0KNM will be active portable JA6 from Kuro Island through thev 9th of June. Activity will be on 40 through 6 meters using C-W and SSB. QDL to their home callsigns, direct or by the bureau.

Word that 9Q1TB will be leaving the Democratic Republic of the Congro during June to start his new job in the United Arab Emirates. No word if he has been issued an A 6 call or when he will be on the air from that new location. Still remaining will be 9Q1EK, will stay in Congo for the next

one or two years.

DL5ME and DG3HWO will be active as DL5ME portable OH2 from Emsalo Island, Finland, through the 8th of June. Their activity will be on the 40, 30, 20 and 17meter bands on CW and SSB. QSL via DH5MM using the QRZ.com address only.

Lastly a new 18 MHz band beacon is on the air from Sliema, Malta. It operates 24 hours a day on 18.10015 MHz USB using PSK31. Power is one half watt to a vertical antenna. QSN reports go via e-mail to stanley@9h1lo.net.

**

THAT FINEL ITEM: THE WORLD IS LISTENING

And finally this week, as he gets ready to leave his position as FCC Special Counsel for amateur radio enforcement, Riley Hollingsworth has a few words of wisdom that we all need to take to heart. They were part of his address at the recent Dayton Hamvention and they really are a must listen for every United States radio amateur:

--

Hollingsworth: "The overall compliance is outstanding in the Amateur Radio Service, but never let the Commission get by again with handing you 10 to 12 years of neglect.

"You have to stay vigilant. Even though the bands may sound better you have to stay vigilant to protect your service and to be part of the solution, not the problem.

"And operate as if the whole world was listening, because generally it is."

--

Hollingsworth adds that the last thing that ham radio needs is any sort of in-fighting. He indicates its very important that all of us stick together and work out our differences as mature individuals for the betterment of all licensees. We at Amateur Radio Newsline, totally agree. (ARNewsline")

Well, "listening" generally is taken by an increasing number of folks as
meaning you are listening, not that you are soliciting a call. If I hear it,
and I also have some reason to talk to you, I may call. Of course, if I had
something to call you about, the cellphone in my pocket probably already took
care of that.

If you want to talk to someone, call them, or call cq.

>I travel a lot, to large cities like Chicago, Milwaukee, St. Louis, Tucson,
>Kansas City, Indianapolis, Detroit, OKC, DFW, Tucson, Phoenix, Denver, El
>Paso/Las Cruces. It's the same everywhere. Just a scattering of signals on the
>bands, but EVERY PAIR spoken for.

True. 10 - 15 years ago, they were busy. Now --- silent. It seems that way
everywhere.

I know that for me, I now have a small car with no good place for a rig, and
park in places where one might not want to leave one in the car. At home, being
married sort of cuts in to sitting in front of the radio all evening.

I don't know what took the interest away for everyone else. However, with
nobody on to talk to, I am less interested in solving the problems in the car
to get on, so if others are in the same boat, we all contribute to the
silence.

It is possible that I live in an anomalous area, but in Central PA, the repeaters are pretty busy. And State College is the smallest metropolitan area in the country. We have 5 repeaters, although one is down for maintenance right now. Altoona to the southwest has a number of repeaters that have traffic on them also.

naive mode on:

One of the most interesting aspects of Amateur radio is that we kind of expect someone to be waiting there to talk to us. While we can't control what happens in other areas, we can control our own.

If we want to generate traffic on the repeaters, the simplest way is to generate some traffic on them. Get a friend and talk on the thing. Next thing you know, others will join you. If enough places do that, there will be plenty of traffic.

naive mode off:

That is what we did in our area. Traffic was down, and the obligatory bemoaning of the problem was up.

We just had people get on the air and yak it up. Could be coincidence, but more and more people joined the party, and a few years later the repeater is in constant use.

This is one that Hams themselves have to bootstrap.

> The NFCC needs to quit being the lapdog of the repeater owners, and do some
> spectrum management housecleaning.

Interesting concept, but how to determine use or lack of use? (sounds
easy, but in practice it isn't.

It's certainly that way in rural Minnesota. There are repeaters in many of the small towns, and they're alive in the sense of being technically there, but they're dead in the sense of anyone using them on a regular basis. Sometimes there's a regular group who gets together in the morning, but for our local repeater even that custom has faded away.

We lost our UHF repeater almost a year ago when the elevator it was on was destroyed by lightning. [For you city slickers, the word "elevator" out here in the sticks is used to describe a large structure in which grain is stored.] That repeater is still silent. A new location was secured, and funding for it was provided by the local emergency management agency, but the antenna still hasn't been erected.

So I have to wonder, in metro areas where all the slots are "full", how many of those repeaters actually exist and would respond if presented with a correctly-toned signal on their published input frequency. Perhaps more important, how many of them are used regularly? It might actually make more sense to shut down several repeaters that don't have a critical mass of users and move those small groups to the remaining repeaters so that there was actually someone there to talk to. Better to have two or three active repeaters in a metro area than a dozen dead ones.

It's a chicken and egg problem. I know that I'm contributing to the problem; my 2-meter equipment consists of an HT, and I've considered that I need to buy a "real" 2-meter rig and put up an antenna . . . but it's difficult for me to justify the time and expense to do so when there's no activity.

73, Steve KB9X

==> NATIONAL HURRICANE CENTER DIRECTOR JOINS WX4NHC ANNUAL TEST

On Saturday, May 31, WX4NHC <http://www.wx4nhc.org/>, the Amateur Radio
station at the National Hurricane Center (NHC), held their annual
Communications Test from 1300-2100 UTC. According to WX4NHC Assistant
Coordinator Julio Ripoll, WD4R, this annual test has two purposes: To
verify that ham radio equipment will not interfere with any equipment at
the NHC, and to ensure proper performance of Amateur Radio equipment at
the NHC.

During the test, NHC Director Bill Read, KB5FYA, addressed the Amateur
Radio community on the VoIP Hurricane Net and on the Hurricane Watch Net
```

<http://www.wx4nhc.org/Bill-Read-QST.mp3>. Read spoke about the importance of Amateur Radio in hurricane-related disasters and thanked Amateur Radio operators for their support in past hurricanes. He encouraged hams to continue to provide that strong support as WX4NHC enters its 28th year of service and the 2008 Atlantic hurricane season begins. Read made several contacts with Amateur Radio operators during the test.

"We all know how important it is to maintain communications during a hurricane to relay our hurricane warnings to those in the affected area which may have no other means to receive this vital information," Read said. "We are also very appreciative for the surface reports from those in the storm which add to our database and help our forecasters better visualize what is actually happening at the ground level in real time. As our own ham radio station, WX4NHC, celebrates its 28th year of volunteer service at the National Hurricane Center, we extend our thanks to all ham radio operators that continue to support our mission to help save lives."

Ripoll, calling the annual test "very successful," thanked all the amateurs involved and called on them for their support as the hurricane season starts up. During the test Ripoll and his crew also completed antenna work in preparation for the season.

Ripoll said that the WX4NHC Annual Station Test started very early on Saturday with three of the operators replacing the main HF dipole. "The dipole runs from the 100 foot tower to the top of the Hurricane Center Building and was reinstalled with a better orientation so that the main effective lobes run SE and NW," he said. "This will improve reception to the Caribbean, as well as the US Gulf area. It took three hours of bringing the dipole up and down to fine tune the SWR down to 1:1.2, but it was worth the effort. Stations monitoring our antenna tests reported improvements of 3 to 6 dB at their locations. We are very happy with the results of this new antenna installation."

It was good timing for the test as the 2008 Atlantic hurricane season started on the same day, albeit one day earlier than it was scheduled: Tropical Storm Arthur formed from the remnants of Pacific Tropical Storm Alma over Central America. Arthur did weaken, but was responsible for very heavy rains and flooding over portions Guatemala, Honduras, Belize and Mexico. This is the second straight year in which a tropical system formed prior to the start of the Atlantic hurricane season.

WX4NHC made 346 contacts during this event: 291 on HF and 55 on EchoLink/IRLP. They heard from 23 states and US territories, as well as such foreign locales as Bermuda, Curacao, Jamaica, Cuba, Honduras, Estonia and Canada.

"The WX4NHC Coordinators and Operators extend their thanks to all ham radio operators that participated in our Annual Station Test," Ripoll said, "and look forward to your continued support during the hurricane season."

==> ARRL FOUNDATION ANNOUNCES 2008 SCHOLARSHIP RECIPIENTS

In May 2008, the ARRL Foundation Board of Directors voted unanimously to award the prestigious William R. Goldfarb Memorial Scholarship <http://www.arrlf.org/programs/scholarships> to Austin Evans Wilmot, KD5QKS, of Dallas, Texas. Wilmot will graduate from Richardson High School this year with a cumulative GPA of 97.64, placing him 19th in a class of 431.

First licensed in 2001, Wilmot holds a Technician class license and was active in his elementary school's Amateur Radio club (W5SPS); he is currently active in the Richardson Wireless Klub, K5RWK. His commitment to volunteer service in his community included support for the Lone Star MS150 Bike tour and the City of Richardson's annual Christmas parade. He can be found on local repeaters and is currently studying for his General class license.

Wilmot credits Amateur Radio with helping to develop leadership, organization and communication skills. Wilmot's studies at Washington University in St Louis will concentrate on medicine and will include his interest in mathematics and finance. "I envision a future as a scientist and economist where I can apply my analytic skills with compassion and curiosity," Wilmot said.

The Goldfarb Scholarship is the result of a generous endowment from the late William Goldfarb, N2ITP. Before his death in 1997, Goldfarb set up a scholarship endowment of close to $1 million in memory of his parents, Albert and Dorothy Goldfarb. Awarded to one high school senior each year, the Goldfarb Scholarship assists the recipient to receive a four-year undergraduate degree in engineering or science or in the medical or business-related fields. The terms of reference of the generous Goldfarb scholarship award require that recipients demonstrate financial need and significant involvement with Amateur Radio, in addition to high academic performance. The sixth Goldfarb Scholarship winner, Wilmot continues the tradition of prior recipients, demonstrating superior academic performance, outstanding leadership and extraordinary Amateur Radio and community service.

More information on the Goldfarb Scholarship is available on the ARRL Web site. Applications for the Goldfarb Scholarship and other ARRL Foundation Scholarships are accepted each year beginning October 1 and ending February 1 for the academic year that starts the following August/September.

The ARRL Foundation awarded more than 50 scholarships -- ranging from $500 to $2500 -- for the 2008-2009 academic year. For a complete list of recipients, please see the ARRL Web site <http://www.arrl.org/news/stories/2008/05/31/10131/?nc=1> or the July issue of QST.

==> HAMS HEAD INTO SPACE

On Saturday, May 31, the space shuttle Discovery launched into the heavens carrying a crew of one Japanese and six American astronauts to

the International Space Station (ISS); of the seven crew members, two are Amateur Radio operators. NASA's Greg Chamitoff, KD5PKZ, is the ISS Flight Engineer and Science Officer on Expedition 17 and will spend six months living and working onboard the ISS, returning home on Endeavour (STS-126), currently targeted for November 10. Japan Aerospace Exploration Agency's (JAXA) Akihiko Hoshide, KE5DNI, is a mission specialist.

Chamitoff will replace Garrett Reisman, KE5HAE, who arrived on the ISS in March; Reisman will return to Earth when Discovery leaves the ISS. It is expected that the ISS Crew -- Commander Sergei Volkov, RU3DIS; Flight Engineer Oleg Kononenko, RN3DX, and Chamitoff -- will conduct Amateur Radio on the International Space Station (ARISS) contacts while on the ISS.

This mission, STS-124 -- the 123rd space shuttle flight and 26th shuttle flight to the ISS -- docked with the ISS at 2:03 PM (EDT) on Monday, June 2. Discovery carries with it the second component of JAXA's Kibo laboratory, the Japanese Pressurized Module (JPM). The 37 foot, 32,000 pound JPM will be attached to the left side of the Harmony connecting node by shuttle and station crew members during a series of three spacewalks. The JPM will join the first component of Kibo, the Japanese Logistics Module, which was launched on the last shuttle flight, STS-123 on Endeavour, in March.

Kibo (which means hope in Japanese) is so heavy that only its primary set of avionics systems can be launched inside it. The second set was launched in the logistics module delivered on STS-123 so that it will be available, if needed, when Kibo is activated. "Kibo is just a beautiful piece of work," said lead shuttle flight director Matt Abbott. "I know the Japanese space agency had an element installed on STS-123, but this is really their pride and joy. This module is amazing."

"It's going to be a world-class laboratory," said astronaut Mark Kelly, Discovery's commander. "It's its own little spacecraft, in the sense that it has an environmental system, electrical system, its own computer system, its own robotic arm. It's got a lot of capability, and I'm hopeful that over the years that the laboratory produces significant discoveries in the fields of chemistry, physics, material science and life sciences. It certainly has that potential." The Kibo laboratory complex includes two robotic arms that also will be delivered on Discovery. A third and final shuttle mission to complete the complex will launch an exterior platform for the Kibo laboratory complex that will allow experiments to be exposed to space.

On Earth, STS-124 will mark the first time the JAXA flight control team will activate and control a module from Kibo Mission Control in Tsukuba, Japan. JAXA is scheduled to take over final activation of Kibo on the fifth day of STS-124, the day after the module is installed. "That's a big day for Japan," Hoshide said. "We'll be doing vestibule outfitting, which is basically hooking up all the jumper connections between Node 2 and the pressurized module for power signals, data cables, fluid lines,

all that stuff. Once that's done we will be activating the main computer in the pressurized module from our laptop computer inside the station - we call that the initial activation. "Then, once the computer's activated, the Mission Control Center in Tsukuba Space Center can start commanding, so we'll hand it over to them. They will start doing the final activation of the module."

In addition to Kelly, Hoshide and Chamitoff, the STS-124 crew consists of Pilot Ken Ham and Mission Specialists Karen Nyberg, Ron Garan and Mike Fossum. Discovery is due back to Earth on Saturday, June 14 at 10:45 AM (EDT) at Kennedy Space Center's Shuttle Landing Facility. -- Information provided by NASA

==> FIELD DAY LOCATOR SERVICE UP AND RUNNING

This year, for the first time, the ARRL has put together a Station Locator to help amateurs or those interested in Amateur Radio find a Field Day site near them. According to ARRL Field Day Manager Dan Henderson, N1ND, many amateurs have been asking for something like this for many years.

If your group would like to be a part of the Station Locator Service, it's easy to get started. Just go to the Field Day Station Locator Web site <http://www.arrl.org/contests/announcements/fd/locator.php> and follow the instructions.

To help you out, Henderson has prepared a FAQ for the Field Day Station Locator.

Q) How does our Field Day site get listed on the map?
A) A club official or Field Day Chairman needs to go to the Web site. Once there, click on the link for "Add a Station" and follow the instructions.

Q) I put in the name of the park where we will be holding Field Day but got the message that the program can't find it. What do I do?
A) You should use a street address for the location. Unfortunately, the mapping program doesn't have a 100 percent complete database of park names and public site names. You may also use a latitude/longitude - enter the values separated by a comma (e.g. 42.345N, 85.445W) and set the city to NONE).

Q) I put in a street address but the map locator put me it in a wrong location on the street. What do I do?
A) While in the data input or edit screen, use your cursor to move the red "pin" to the correct location on the map.

Q) What if I put in the wrong information or something about our Field Day operation changes?
A) The person who input the data will be able to edit the entry. Simply follow the "Add a Station" link and then select "Edit this entry" next to the one to correct.

Q). I tried to enter my club's information, but I was denied access. What do I do?
A) To help ensure that only one person is managing a club's entry, you must be logged onto the site with your ARRL member ID and password. If you are not an ARRL member, ask a member of the club who is to be responsible for adding the club's information to the site.

Q) I am looking for a Field Day operation to attend. How do I use the site?
A) Begin by typing in the city and state where you would like to search, something like "Brooklyn, New York" or "Anaheim, California." Depending on the geographic location, the map will take you to the area you list. If a Field Day operation has been registered for that general area, a red "pin" will show on the map. If you click on the red pin, the details for that site will appear in the box on the right hand side of the screen. If you don't see a red pin, scroll out a level to find one near the location you listed. It is also possible to drag the map to other areas by holding down the left button on your mouse and then moving the map around. You can also scroll in and out using the +/- buttons on the left side of the map. You may also zoom in and center by double-clicking with the mouse near the red pin.

Q) I found a red pin near where I will be. Where do I find the information on that site?
A) Each entry has a contact person with either an e-mail address or phone number who should be able to help you. It will appear on the right side of the box when you click on the red pin for an entry.

Q) I found an entry with wrong information. What should I do?
A) Please contact the person whose name appears as the contact person for that site. ARRL HQ does not have detailed information on the site.

Q) I want to check on our club's information. What should I do?
A) Type in the call sign that will be used and you will be taken to the location and club information.

ARRL Field Day will be held June 28-29. For more information, please visit the Field Day Web page <http://www.arrl.org/fieldday>.

==> ARMY MARS OFFERS FREE FATHER'S DAY MESSAGES FOR SOLDIERS OVERSEAS

If Jeff Hammer, N9NIC, gets his way, he'll be an awfully busy soldier in the run-up to Father's Day on June 15. Captain Hammer, who represents the Army Military Affiliate Radio System (Army MARS) in Iraq, has appealed to the families of troops deployed overseas to "shower down with Father's Day messages" for their loved ones.

According to Army MARS Public Affairs Director Bill Sexton, AAA9PC/AAR1FP/N1IN, these free messages -- called MARSgrams -- date back to the Korean War when many thousands were delivered. The service continued during the Vietnam conflict and the first Gulf War, but had fallen off with the advent of e-mail and cell phones.

As the military's Middle East operations continue, Sexton said that the responses from that area indicate that the soldiers treasure the printed MARSgrams as mementos of their deployment: "It's not just a greeting. E-mail just isn't the same." MARSgram traffic spurted last Thanksgiving and Christmas, and Captain Hammer reports that he is "100 percent set up" to handle MARSgrams for Father's Day.

A National Guardsman from Indiana, Hammer arrived in Baghdad just this spring after previously serving in Afghanistan. In addition to volunteering for the MARS assignment, he is acting as station custodian for the Baghdad Amateur Radio Society. Hammer shipped in his own low-power ham station and began direct receipt of messages May 25; he has to shoehorn his volunteer Amateur Radio activity into his off-duty hours.

On Sunday, June 1, five soldiers including Hammer gathered for a meeting of the Baghdad ARS. Besides Hammer, three Amateur Radio operators are part of the group: Warrant Officer 2 Edward Mendez, N3BZA, who also operated the military MARS station ABM4USS in Korea for an Aviation Maintenance Company; Barry Coronado, KC8RTK, a Department of Defense employee, and Wayne Gale, W0GTO, a contractor.

The subject of Sunday's meeting was preparing for the hoped-for Father's Day surge. After a period of instruction on MARS procedure during which the participants wrote their own MARSgrams, Hammer took the members to his personal MARS station to attempt transmission despite difficult propagation conditions.

"We are only running 5 W on a Yaesu 817, but we wanted to give it a try if for no other reason than to see the equipment and demonstrate the procedure," Hammer messaged afterward. "God must have been smiling down on us because after only a few attempts we connected to AEN3QT in Qatar on 40 meters and got all the messages through without any problems."

Family members can easily send free MARSgrams overseas by entering their message on the MARSgram Web site <http://www.mymars.org/>. The Army MARS WinLink system will automatically relay the Iraq-bound messages to Hammer and his helpers; they will produce printouts and envelopes and hand them off to the Military Postal Service for final delivery. A MARSgram travels much faster than ordinary mail and can be delivered wherever American troops serve.

Army MARS is a Department of Defense-sponsored organization of more than 2700 Amateur Radio operators who provide emergency communications backup for government agencies in times of civil calamity; active-duty service personnel are welcome to join. Parallel MARS units serve the Air Force and Navy-Marine Corps, making the three-prong program more than 5000 members strong.

==> ARRL WELCOMES YAESU AS PRINCIPAL SPONSOR OF LOGBOOK OF THE WORLD WEB SITE

The ARRL welcomes Yaesu as the principal sponsor of the Logbook of The World (LoTW) <http://www.arrl.org/lotw/> Web site. LoTW is a repository

of log records submitted by users from around the world; when both participants in a QSO submit matching QSO records to LoTW, the result is a QSL that can be used for ARRL award credit. With almost 21,000 amateurs registered on LoTW, more than 170 million QSO records have been entered into the five year old system, resulting in more than 13.4 million QSL records.

"Yaesu is absolutely delighted to be the Principal Sponsor supporting the extremely popular ARRL Logbook of The World Web site," said Yaesu's Executive Vice President for Amateur Radio Sales and Marketing Dennis Motschenbacher, K7BV. "It provides Yaesu with an opportunity to serve the Amateur Radio community. We hope LoTW users will note our support and judge this action for what it is intended to be -- a 'Thank You' to the thousands of avid DXers and other active operators worldwide." In return for its sponsorship of the LoTW Web site, Yaesu will receive promotional consideration in QST and on the LoTW Web site.

Motschenbacher said he understands that hams have felt the "pain" of postal price increases around the world: "I am certain that a huge number of hams have had to give up their dream of having prestigious ARRL certificates and plaques on their wall simply because they could no longer afford the postage costs associated with exchanging QSL cards to verify contacts. Those QSO verifications are, however, absolutely essential for maintaining the integrity of ARRL's DXCC and other awards. LoTW, with its global acceptance, now allows nearly everyone interested in the excitement that goes along with chasing DX and awards to provide most if not all of the required all-important QSO verifications without burdensome postage expenses. LoTW provides a very valuable service for both the individual users and ARRL."

ARRL Chief Operating Officer Harold Kramer, WJ1B, thanked Yaesu for their ongoing support of the ARRL. "We look forward to working with them on the Logbook of The World Web site."

==>SOLAR UPDATE

Tad "A sunny pleasure-dome with caves of ice" Cook, K7RA, this week reports: We had seven days of no sunspots this week, but a sunspot was emerging on Thursday, June 5. Helioseismic holography revealed a high latitude sunspot on the opposite side of the Sun. Until recently, we had no idea what was happening on the far side of the Sun, the side directed away from Earth. The NOAA Space Weather Prediction Center sees a constant and quiet geomagnetic planetary A index of 5 through June 14. Geophysical Institute Prague predicts quiet conditions for June 6, quiet to unsettled June 7-8 and quiet again June 9-12. Sunspot numbers for May 29-June 4 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 68.1, 67.1, 66.9, 66.6, 67.1, 66.3 and 65.2 with a mean of 66.8. Estimated planetary A indices were 9, 11, 8, 8, 5, 4 and 4 with a mean of 7. Estimated mid-latitude A indices were 7, 7, 8, 6, 4, 3 and 2, with a mean of 5.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's

Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder and the Digital Pentathlon are both June 6, and the Wake-Up! QRP Sprint is on June 7. On June 7-8, look for the DigiFest, the SEANET Contest, the UKSMG Summer Contest, RSGB National Field Day - IARU Region 1 Field Day (CW) and the Alabama QSO Party. The SKCC Weekend Sprintathon is June 8. The NAQCC Straight Key/Bug Sprint and the RSGB 80 Meters Club Championship (CW) are both June 11. Next weekend is the ARRL June VHF QSO Party on June 14-16. Look for the NCCC Sprint Ladder and the Digital Pentathlon on June 13. The Portugal Day Contest and Asia-Pacific Sprint (SSB) are June 14. Look for the ANARTS WW RTTY Contest, the GACW WWSA CW DX Contest, the REF DDFM 6 Meter Contest and the West Virginia QSO Party on June 14-15. The Run for the Bacon QRP Contest and the SARL Youth for Amateur Radio Event are June 16. The RSGB 80 Meter Club Championship (SSB) is June 19. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 22, 2008 for these online course sessions beginning on Friday, July 4, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* More Field Day T Shirts On the Way! During the last couple of weeks, a surge of demand for 2008 ARRL Field Day T shirts had exhausted the supply much earlier than previous years. "It's clear that this year's Field Day logo and slogan -- Ride the Waves -- is a big hit!" said ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R. "We want to assure

our valued members and clubs that more shirts are on the way. Until today, we weren't certain we could restock the shirts in time for delivery before Field Day. But our manufacturer has promised to re-supply the shirts as early as next week." ARRL Field Day is June 28-29. To order Field Day T shirts, participation pins and other items, as well as information on this year's Field Day, including the Field Day Locator Service, please go to the ARRL Field Day Web page <http://www.arrl.org/contests/announcements/fd/>. The ARRL regrets any inconvenience with order delays. Inderbitzen added, "Since February, we've encouraged clubs to place their orders early. But this good news means there's still time to Ride the Waves!"

* Morse Code Returning to MARS Toolbox: After more than a dozen years, Morse code will soon be returning to Military Affiliate Radio System (MARS) nets. In the mid-1990s, the Department of Defense (DoD) did away with CW operation across the board -- including MARS nets -- as automatic systems such as the Internet, SATCOM, cell phones and e-mail became available and the payroll cost of manual operators escalated. Army MARS launched a limited test of CW nets in four Midwestern states in late 2007. During a DoD interoperability test this past March, a Transportation Security Administration (TSA) station used it to communicate with Fort Huachuca. In announcing the return of CW to MARS nets, Navy-Marine Corps MARS Chief Bo Lindfors cited an emergency where CW was sorely missed: "I remember the [1998] Northeast Ice Storm shortly after I became [Navy-Marine Corps MARS] Chief and the unnecessarily lengthy effort by all of southern New England to receive one voice EEI [Essential Elements of Information Report] from a northern New England member whose antenna was covered in ice and lying on the ground. It took more than an hour when CW could have handled it in a few minutes. As more and more of our members enter MARS with no Morse code experience, I am afraid that we will soon lose that skill set if we don't do something." Army MARS Chief Carter said the imminent return of CW will not replace modes such as WinLink, Pactor 3 and MT63. "Our CW nets will focus on maintenance of skills and will necessarily be limited by the shortage of available frequencies and trained members," he said. "But if members want to add CW to their skills, the nets will be available for training."

* Hein Hvatum, N4FWA (SK): Hein Hvatum, N4FWA, who in the 1970s and '80s supervised construction of one of the world's most powerful radio observatories, died of cancer May 22 at his home in Charlottesville, Virginia. He was 85. In 1974, Hvatum assumed responsibility for construction of the National Radio Astronomy Observatory's Very Large Array (VLA), an arrangement of radio telescopes near Socorro, New Mexico. The VLA has made key observations of black holes and protoplanetary disks around young stars, discovered magnetic filaments and traced complex gas motions at the Milky Way's center, probed the Universe's cosmological parameters, and provided new knowledge about the physical mechanisms that produce radio emission. The observatory is perhaps best known to the general public for its appearance in the 1997 movie "Contact" with Jodie Foster; it has also appeared in Carl Sagan's

documentary "Cosmos," in the movie "Independence Day," in a Bon Jovi music video and on the cover of a Dire Straits album. The VLA was completed in 1982. Hvatum, an ARRL member since 1981, was responsible for computing, antenna design and electronics for the $78 million project, the largest the National Science Foundation had funded at the time. Hvatum became acting director at NRAO in 1984 and project manager for the Very Long Baseline Array the next year. He retired in 1987. Hvatum, as a member of the Albemarle Amateur Radio Club, organized a number of community emergency preparedness drills. He was active with both national and international groups seeking to protect radio frequencies for radio astronomy. Calling Hvatum a "friend, mentor and Elmer," the Albemarle ARC said Hvatum will be missed "by everyone who had the pleasure of knowing him and calling him a friend." According to the Albemarle ARC Web site, a memorial service for Hvatum is planned for 2 PM on June 27 at NRAO Headquarters. The family requests that in lieu of flowers, donations be made to the Hospice of the Piedmont or to the Leukemia/Lymphoma Society.

* Be Careful on 10 Meters: With recent band openings beginning on 10 meters, ARRL has received word that a number of US amateurs have been heard using SSB below 28.300. "We urge everyone to remember that 28.000 to 28.300 MHz is reserved for RTTY and data, including CW," said ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG. "Phone is permitted from 28.300 to 28.500 for Novice and Technician class licensees with a maximum power of 200 W. Phone and image are allowed from 28.300 up to 29.700 for General, Advanced and Extra class license holders." Skolaut, who manages the Official Observer and Intruder Watch programs, said that people have called and e-mailed ARRL HQ inquiring about hearing IDs repeated in code on various 10 meter frequencies. "What they are hearing are beacons," Skolaut said; he suggests checking out some Web sites for more information on beacons you might hear on 10 meters <http://www.dxzone.com/cgi-bin/dir/jump2.cgi?ID=1114> and other bands <http://www.ncdxf.org/beacons.html>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

When I hear someone say "listening", I think, "that's nice, they're
listening". I'm listening, too. If I don't know them or have some reason
to talk to them, I don't call them.

>The NFCC needs to quit being the lapdog of the repeater owners, and do some
>spectrum management housecleaning.

So now it is also the responsibility of the repeater owner to protect
his investment in equipment by seeking people to use his repeater all
the time? Otherwise, it will be "housecleaned" out from under him?

Do we have enough people to use all the possible repeaters all the
time? If not, then "housecleaning" to open spectrum up for other people
to install repeaters will just result in more empty repeaters. If you say
you just want to houseclean out all the unused repeaters and replace them
with nothing, what value is the housecleaning? You'll remove valuable
resources and replace them with nothing. The only "gain" (in the former
case) will be that new people who want the status of owning a repeater
will own repeaters that are empty. No gain at all in the latter.

I'll point out the opposite opinion: a repeater that is filled with
chit-chat all the time is unlistenable. It just drones on and on and
becomes background noise. Couple that with people who think they need
to be cute and entertaining on the air and it's no longer just noise,
it's painful. We have a "lunch bunch" on a local system every day. The
net control seems to think a sing-song delivery and "creative phonetics"
for everyone checking in is mandatory. I know some people like it. I
find it difficult to understand what he's saying most of the time. Is
he saying something important, or is he just spouting words with the
right first letters for the callsign he just heard? I turn it off.

Alan <nospam@w6yx.stanford.edu> typed, for some strange, unexplained
reason:

[snip]

: Well, "listening" generally is taken by an increasing number of
: folks as meaning you are listening, not that you are soliciting a call.
: If I hear it, and I also have some reason to talk to you, I may call.
: Of course, if I had something to call you about, the cellphone in my
: pocket probably already took care of that.
:
: If you want to talk to someone, call them, or call cq.

Now that's an interesting thought. When I was studying for my licence back
in 1982 we were told quite categorically that one didn't "call CQ" on
repeaters, but that we should announce that we were "listening through"
the repeater.

Even now, someone calling CQ via a repeater makes me wince ever so
slightly..!

I didn't make my point very well. We don't need to "generate traffic", we simply need to clean out the dead "legacy" assignments and free up room for things like DStar and other emerging technologies.

I just had a look at our local (Minneapolis/St Paul) pair assignments. In the 2M and 75CM bands there are 108 repeater pairs assigned. You read right --- ONE HUNDRED AND EIGHT! Yet I can scan both bands for hours on end and hear nothing.

Since this thread is about the "5th Pillar" of ARRL emphasis, "technology", perhaps ARRK and NFCC could jointly sponsor a Skimmer-like technology initiative which would put up a broadband receiver on a local highrise (we're in flatland country out here) and count squelch-tails per QRG for three months. Then approach the low 10% and suggest they might reconsider their needs. Especially those clubs who sponsor multiple quiet repeaters all covering an identical footprint.

> It's a chicken and egg problem. I know that I'm contributing to the problem; my 2-meter equipment consists of an HT, and I've considered that I need to buy a "real" 2-meter rig and put up an antenna . . . but it's difficult for me to justify the time and expense to do so when there's no activity.

There used to be so much activity around here in Tucson a decade or more ago, and I was active in it, but I suppose everyone migrated to the internet... ? I thought about installing my 2m radio in my car so that I have something to occupy part of my cross-country drive next year (I hope), but maybe it's not worth it. If I knew there were folks along the way regularly monitoring .52, I'd do it. If repeaters didn't have all these different tone accesses, I'd do it. I'm not going to spend each night of the trip programming the radio to accommodate what repeaters I may encounter for any given upcoming 500 mile stretch.

Howard

If you know a "dead" frequency pair, what interference do you imagine you
will create by using it for Dstar or other emerging technology? If you
aren't creating interference for a coordinated repeater, what prevents
you from using that pair?

>which would put up a broadband receiver on a local highrise (we're in flatland
>country out here) and count squelch-tails per QRG for three months.

I'm not sure how you count "squelch tails", but that's such a simple
system to game that it would mean nothing. If I wanted my pair kept
"active", I'd simply make a dozen calls a day on the output frequency. (Is
THAT what this QRG thing you keep talking about is? I don't speak CW
on Usenet.) Heck, I'd just set up an APRS beacon on the output. They have
squelch tails too.

>Then
>approach the low 10% and suggest they might reconsider their needs. Especially
>those clubs who sponsor multiple quiet repeaters all covering an identical
>footprint.

And then the stuff hits the fan and the groups that were going to support
the local hospital and power company and red cross and cop shop and road
department find themselves all trying to use the one or two repeaters
you'd like them to be limited to, while the DStar systems sit silent
because nobody could afford the radios to use them.

If there are a dozen repeaters with zero activity, most will go dead in any disaster because it takes real human interest and work to provide emergency power. I'd rather have two or three solid repeaters than a dozen where the maintenance is hit-and-miss and there's no one who really cares whether they are up or not.

There must be a compromise between these two opinions. There cannot be
108 active repeaters in one urban area. Frequency coordinators need a
way to reassign pairs that really are no longer being used.

Hi again Mark,

Certainly there are places where there or only "one or two repeaters", but my hypothetical example was built from my own local area where there are 108 pairs assigned. If my PBI were implemented and the Repeater Council could harvest the arbitrary 10% I mentioned, then there'd still be 97 legacy machines to choose from, and 11 pairs opened for emerging technologies.

QSL?

Hence, HF. You might hear more local activity on 10m. 80 or 40m during daylight hours should also be good for local/regional activity.

Mr. Bryan,

I have neither the room in my car for my IC-735, nor the willingness to put up a 4BTV on my car's plastic bumper. (You'll find them in the back by the shipping area.)

Fugetaboutit!

K0CKB and I travel many thousands of miles a year in a coach with "K0HB & K0CKB
monitoring 146.52" prominently displayed on the back.

We also frequently announce our presence on .52. In the past 5 years we've had
precisely 2 QSO's on .52 as a result.

Don't bother.

Thanks, Hans. That'll save me from making a bunch of unnecessary holes in my nice car.... and the price of a fancy new repeater directory. *sigh* I'll wait until I get to 1-land and get to know my new neighbors.

One of the several radio clubs which I am a member of maintains a
rather extensive UHF repeater system which usually sits silent except
for about a half-dozen of us during commute hours or when we are doing
some exercise like Field Day. If this was to "go away" (fat chance of
that, knowing the reality of the situation and the folks involved) the
local medical center where I am the Disaster Communications Team
co-manager would be without required ham radio backup. We went to
that arrangement when we found out in a real disaster last December
that the local ARES groups could not accommodate the type of traffic
that we needed because of their own overloads.

Consider the trap that the FCC's first-generation automated Spectrum
Management System fell into some 30+ years ago. It sat on Fire Radio
Service frequencies and reported no activity. Of course not - if
there are no fires there is no radio traffic, and the vast majority of
fire radio activity is with 5-watt on-scene HTs. Similarly, it
reported almost no Railroad Radio Service traffic in New York City -
where the monitoring was done during daytime and the bulk of freight
movements are at night. And to cap it off, it reported continuous
occupancy of a lot of channels in Chicago 24/7, until one of the old
hands at the Field Office listened and found out that it was a
defective electrical device throwing RFI into the air.

You assume that those repeaters do not have backup power. I found that this was not the case in the ham communities of San Francisco and Portland (OR) areas, the two places that I have had extensive experience with VHF/UHF repeaters. Backup power is relatively easy to get at those sites where ham and commercial facilities are co-located, which are most of the places where the ham repeaters are.

Similarly, you assume that because a repeater is silent that "the maintenance is hit-and-miss and there's no one who really cares whether they are up or not". Again, my experience does not bear this out. Most of the repeaters that are reported "silent" are because they are kept alive by a small group of people whose activity is not always observed by the casual ham. I'm the trustee of two club repeaters maintained by one of the other members who is a 2-way radio tech. Our 2 meter machine is used all the time by ham-licensed truckers driving up and down the Interstate. The other is used only by the few club members who have the 223 MHz band in their radios. The casual listener would consider that one "unused", which is not the case.

Similarly, during the many hours each day that I spend in my Comm Center at home - a cross between a home office, a library, and a ham shack - I maintain a speaker watch on the UHF repeater that my other local club uses for commute-hour rag chews and is available for use for hospital disaster communications. Except for the commute hours, it is "silent" but I'm there to answer any calls and to join in the rag chews. That seems to be the norm for the "silent" repeaters in this "no pairs available" area. We do have several where there's pretty frequent use, though.

Repeater-based ham radio is alive and well in Webfoot Country.

Did you mean 3965kHz? There is no scheduled DRM transmission on
3865kHz. On 3965, Radio France has a 1kW DRM transmission from
Issoudun targetting France on all day except 1800-1900 and 2000-2200
UTC. I'm amazed that you find it so strong across the Atlantic.

I am assuming that a repeater with ZERO activity is a repeater with no one who cares about it. In one of your previous posts you mentioned a repeater in your area which is "only" used during commute times and FD; this is not zero activity and indicates that there is a core group of people who care about the repeater.

The kind of repeater I'm talking about is one that might have been quite active a decade ago, but has been running on inertia for several years. Maybe it still responds to a signal on the input frequency, but the chance of it having usable backup power is extremely low. Another issue is potential damage during the disaster; if there is not a group of people who use the repeater, no one will be there to make the perhaps-trivial repairs necessary to get it back on the air.

> Similarly, you assume that because a repeater is silent that "the

The key word in your sentence is "used". "Zero activity" is incompatible with "used".

I said, "I'd rather have two or three solid repeaters than a dozen where the maintenance is hit-and-miss and there's no one who really cares whether they are up or not." I did not imply that if a repeater is silent that the maintenance is hit-and-miss. What I said is that if there is not a group of people who care about the repeater, it's likely to be useless in a disaster, and I stand by that statement.

> Similarly, during the many hours each day that I spend in my Comm

Any repeater that has a regular group that uses it during commute does not fall under the category of "zero activity", and obviously there is a group of people who care about it.

> Repeater-based ham radio is alive and well in Webfoot Country.

Good. I think that perhaps you misinterpreted my initial comment to be that a repeater needs to have constant activity to be viable, and that's not what I was trying to say. I do stand by my initial statement that, given the choice of a dozen zero-use repeaters or a couple of busy ones, I'll take the lower number of busy ones because they will be more likely to survive a disaster.

And again let me point out the difference between urban and rural environments. The simple fact that you have a higher population density almost guarantees that you have more people using the repeater(s). Of course, if you have many repeaters, the person-per-repeater number may be as low as ours.

Our situation here in rural Minnesota is rather marginal. We do have a local club with a core group of people who care enough about the repeater to keep it going. On the other hand, our UHF repeater has been down for almost a year now, and somehow the group has not been able to get it back on the air, primarily because one person has promised to provide a new site for the repeater and has not followed through on that commitment.

We had an actual disaster a few months ago, not in this immediate area but in rural Minnesota. There was a need for ham radio communications because the incident was "down in a hole" where cellphones wouldn't work. (Floods often happen in river valleys.) The response was not what it should have been. Part of this is due to the low number of hams, and part is due to the lack of organization.

I'm not sure that the idea of getting rid of analog repeaters so that D-
Star repeaters can be given those frequencies is really going to do
much. If your area has 108 repeater pairs coordinated, and no activity,
I suspect that a D-Star repeater will be likewise not have much
activity. At this time you would probably just have one more repeater
that isn't used.

Your area's problem is lack of interest, not too many repeaters. My
point is if Hams start using the repeaters, they might bootstrap
interest.

After interest is generated, then the possible next conversation might
be "Hey, we have that old repeater on the south side of town, maybe a
group of us can get together and go digital....

Respectfully no. my lack of communication skills is showing sorely.

What I am saying is that if the sum total of communications is Zero, no
one will use a new repeater, D-Star or analog.

Further, I am saying that if no one is interested, who among the
disinterested is going to put up that repeater?

Finally, if interest is generated, perhaps some of the interested will
remove that unused analog repeater, and put a digital one in it's place.

Or the condensed version:

An unused digital repeater sounds the same as an unused analog one. ;^)

>incompatible with "used".

Unless you monitor a frequency 24/7/365, it is impossible to claim
"zero use". When most people say "zero use", they mean "I never hear
anything on it". There is a BIG difference.

>I did not imply that if a repeater is
>silent that the maintenance is hit-and-miss.

"I am assuming that a repeater with ZERO activity is a repeater with
no one who cares about it." Define the difference between "silent" and
"zero activity".

>What I said is that if
>there is not a group of people who care about the repeater, it's likely
>to be useless in a disaster, and I stand by that statement.

I wasn't talking about a place where there are only one or two repeaters.
I was talking about a place where there are a large number of repeaters,
but only one or two have a lot of activity. If you want to got through
and shut down the "inactive" repeaters so you can harvest the assigned
pairs, then you will wind up with not enough infrastructure when it is
really needed.

>If my PBI were implemented and the Repeater Council could

If there are 10% of those pairs truly unused, there doesn't need to be any
harvesting. Just use them. Who will you be interfering with?

>QSL?

I verify this conversation took place.

No, we could say "who are you interfering with if you put your newfangled technology on a pair where there is no repeater active?"

How did we ever have repeaters before coordinating agencies were formed?

The tone of this (and other) responses seems to suggest "just stroke up on a convenient pair, and wait to see if the coordinated person/club complains".

If I lived in Resume Speed, Montana that might work, at least for awhile, if I had the bad manners and grapes to try. But if you commandeer a pair in an already wait-listed/saturated environment, you can kiss off EVER getting a coordinated pair (and for good reason).

It would be far easier to connect a voice-activated tape recorder
(like a Sony TCM-37V recording walkman) to a scanner that was set to
scan just the frequencies that are suspected of being dead. Then, you
could document your results when claiming that the frequencies should be
reassigned.

No, that is not what was said at all. That is not the tone of what was
said, nor was it said directly.

If you know a pair where there is no active repeater, you are not just
"stok[ing] up on a convenient pair", you've picked the pair with an
explicit reason. If a coordinated user complains that you are interfering
with a repeater that does not exist, you are free to laugh at him. Tell
me, just how DO you interfere with a non-existant system? Do you think
the FCC is going to listen to him?

>If I lived in Resume Speed, Montana that might work, at least for awhile, if I
>had the bad manners and grapes to try.

You think it is bad manners to use a frequency that is not being used? You
only join conversations already in progress? You never make a call on
an unused frequency?

>But if you commandeer a pair in an
>already wait-listed/saturated environment,

The the pair is wait-listed and saturated, then it isn't unused, now is it?

Gentlemen;

The point to remember is that NO repeat NO one has a right to any
particular radio frequency. Even coordination does not grand any right
to a particular radio frequency, only license to use the frequency.

The repeater coordinator has a responsibility to insure that an
applicant really does intend to utilize the assigned radio frequency. If
the applicant does not do so after a reasonable time then the
coordination is or should be null and void. No, I am not going to define
reasonable.

It's like cell phone companies getting assignment to a block of 10,000 numbers and not using them causing the creation of a new area code to free up new numbers. The FCC, I believe, has baned this practice.

Repeater Coordinators have a responsibility to allocate an extremely scarce resource in a fair and reasonable manner. Those who get a coordination just to have one and don't place equipment on the air, even if they use it in a limited manner, do not deserve to retain the coordination and the frequency should go to a new applicant.

Remember the FCC gives precedence to a valid coordinated applicant over a claim jumper. But the coordinated applicant must be using the coordination. Maybe applicants should report back to the coordinator when the repeater is placed into service and when it is removed from service for reasons other than routine maintenance to include damage due to natural causes. This will keep applicants on their toes to keep their repeater on the air and active.

97.205(c).Where the transmissions of a repeater cause harmful interference to another repeater, the two station licensees are equally and fully responsible for resolving the interference unless the operation of one station is recommended by a frequency coordinator and the operation of the other station is not. In that case, the licensee of the noncoordinated repeater has primary responsibility to resolve the interference.

So does 97.205(c) give the licensee of the coordinated repeater any rights? Seems to me that it does.

We can go on and on with "could of" and "should of", and with discussion of what "harmful interference" means. The bottom line is that frequency coordination is recognized in the regulations and thus it's not a prudent idea to simply ignore it and pick a pair for your new repeater.

How is this different than picking a pair where there's an active
repeater, or a repeater that is temporarily down? It's not your
prerogative to "pick a pair", just because you think it's unused.
That's what frequency coordination is for, and the reason it exists. Of
course you have an "explicit reason"; that doesn't give you the right to
ignore the law. And yes, it is "the law".

> If a coordinated user complains that you are interfering

Yes, the FCC is going to listen to him, because he has the right to use
that pair, while you do not. The FCC does recognize the work of
frequency coordinators.

You just don't understand the concept of formal frequency coordination,
do you?

>> But if you commandeer a pair in an
>> already wait-listed/saturated environment,
>
> The the pair is wait-listed and saturated, then it isn't unused, now is
it?

I am sure that in many areas there are repeater pairs that, in your
eyes, would appear unused. It is the charter of the frequency
coordinator to make that determination, not each individual ham.

It's too bad that we need formal frequency coordination and can't go
with the concept of "no one owns any frequency". Experience has shown
that the formality is needed in this case, and I your explanation of how
you could just jump in and squat on any repeater pair because you want
it is a fine illustration of how we got to this point.

Could you please remind us where the work of the frequency coordinator is
enshrined in law?

Sure there is a legal duty not to cause interference, but as the OP said it
is not possible to interfere with a non-existent system.

Jeff

I used to be involved in packet radio coordination, a subset of
frequency coordination. As I explained to people, "If you're not
getting any death threats, you're not doing your job."

On frequency coordinators. They are necessary because people
have shown repeatedly that they can not all work together.
From the very beginnings in the early '70s out here in Los
Angeles people have shown a propensity for acting like fools.

Not that the frequency coordinators "do it right" all the
time. Notably the 220 disaster. How do you reallocate all
the repeaters when you lose a big chunk of spectrum? Easy,
You tell everyone at the low end of the band, "You lose."
That actually required the FCC to step in and force band
plans on the coordinators.

The bottom line, frequency coordination is necessary. As
they say, "Good fences make good neighbors."

Try going without one. Who wins the frequency? the one with th e
strongest signal, I suppose.

> Sure there is a legal duty not to cause interference, but as the OP said it
> is not possible to interfere with a non-existent system.

Squatting is just bad manners, and not terribly civilized. Hams are
supposed to be civilized. Let's say that you put up an uncoordinated
repeater on a frequency that someone else has coordinated. Then le't
suppose another uncoordinated repeater goes up on the frequency you
picked. Who controls that frequency? You or the second squatter? Who moves?

I looked up the repeater coordination in Hans' area. Although I didn't
come up with 108 allocations, I might not be using the same total area
he is. I used Minneapolis/St Paul, and came up with a hundred - 76 in
Minneapolis and 24 in St Paul. Fairly close at any rate.

On Artscipub.com, they have listed 21 repeaters for Minneapolis, and 1
for St Paul.

Note that 3 of those are in the 6 meter band, and 4 are on 222 MHz band.

That leaves us with 8 on 144 MHz and 7 on 440 MHz. Less than 10 percent
utilization.

There is no reason that application can not be made to acquire one of
those unused pairs. I don't know if it is universal, but in at least
some repeater councils, after 6 months of no use, and no extenuating
circumstances, a repeater pair can come up for re-coordination.

But looking at the disparity between the assigned numbers, the repeaters
in use, and what Hans has to say about the situation, adding a new
repeater is not going to cure what appears to be a severe lack of
interest in V/UHF repeater use in his area. Seriously, that needs fixed
first.

Has anyone tried re-coordination, Hans?

Umm, no, the FCC grants the license, not the coordinating body.

The coordinating body picks who gets preference when there is an
interfering use.

If there is no interference, coordination doesn't come into play.

If I use the output frequency of the local repeater in simple mode,
I am not interfering with that repeater. The repeater won't even know
I am there. The users of the repeater who can't hear me won't know. The
users who do hear me hear nothing different than if I was using it. If
someone keys up the repeater on top of me, they interfere with me, but
that's life. If they are coordinated and I am not, I have to put up with
them. If they are not coordinated, we have to work to solve the problem.

>Repeater Coordinators have a responsibility to allocate an extremely

What, exactly, is the signal strength coming from a repeater that does not
exist? I suspect 0 is a correct answer.

>> Sure there is a legal duty not to cause interference, but as the OP said it

>Squatting is just bad manners,

Using an unused frequency is not squatting. It's done every day.

>Hams are
>supposed to be civilized. Let's say that you put up an uncoordinated
>repeater on a frequency that someone else has coordinated.

Ok. He's the coordinted user, but hasn't installed any hardware in the three
years that he's had that coordination. That frequency pair is coordinated
but unused.

>Then le't
>suppose another uncoordinated repeater goes up on the frequency you
>picked.

Ok. Someone else puts up a repeater on the frequency you put yours on.
Good so far.

>Who controls that frequency? You or the second squatter? Who moves?

Nobody controls it. The law says that you are both responsible for
solving the interference issues. Nobody has to move. You might solve
it by putting different tones on the inputs. You might solve it by
lowering power, or in any number of other ways. But nobody "controls"
the frequency. You are both on the hook. That's part of the privilege
of being able to select one's operating frequency.

>On Artscipub.com, they have listed 21 repeaters for Minneapolis, and 1
>for St Paul.

Repeater directories are really good for telling you where the repeater
is, but notoriously bad for telling you what they cover. To know a pair
is unused, you need much more than a repeater directory.

>That leaves us with 8 on 144 MHz and 7 on 440 MHz. Less than 10 percent
>utilization.
>
>There is no reason that application can not be made to acquire one of

How do you know they are unused? In my state, you ask for a pair but you
don't ask for a specific one. They tell you what you get.

>I don't know if it is universal, but in at least
>some repeater councils, after 6 months of no use, and no extenuating

The pairs are all assigned, Mike, or are assigned in other nearby areas too
close for geographical sharing.

If you must check my numbers (why would I make something up?) the official
coordinated list is at http://www.mrc.gen.mn.us/MN_List.pdf ... scroll down to
about page 10 under the heading <<METRO>>

Now where did I lay my Skimmer......

Sheeeeeesh!

The notion I advanced wasn't an arbitrary and heavy-handed "mass extinction",
but a deliberate cooperative "needs assessment" process. Here is what I
suggested:

Since this thread is about the "5th Pillar" of ARRL emphasis,
"technology", perhaps ARRL and NFCC could jointly sponsor
a Skimmer-like technology initiative which would put up a
broadband receiver on a local highrise (we're in flatland
country out here) and count squelch-tails per QRG for three
months. Then approach the low 10% and suggest they might
reconsider their needs. Especially those clubs who sponsor
multiple quiet repeaters all covering an identical footprint.

An obvious part of that needs assessment process would be to identify (and
protect) critical infrastructure. The desired end result (not well stated,
perhaps), would be a small pool of QRGs set aside as an "emerging technology
corridor" (DStar mentioned only as an example) where tinkering and
experimentation were encouraged.

Mike suggests that there would be very few users of such a "technology
reservation". That's almost certainly true, but I don't think that makes it a
"bad thing". It's no secret that homebrewing and "radio for the sake of
advancing the art of radio" (in Mikes terms "technology for it's own sake") is a
minority share of our hobby. But I think that it's an important minority,
critical to our future, and that we can afford to set aside "incubation
spectrum" to nurture it.

I spent a good chunk of my career gathering info on use (and non-use)
of radio channels as evidence. It is easy to show something is used -
play the tape / show the printout. Showing that a channel is not used
is quite a bit more difficult - is the blank tape real or a sham?

We're going through that right now in a commercial channel reclamation
proceeding before the FCC where it's our word against theirs.

>going to tell you to stop using it?

That is not what K0HB wrote. In
<VfOdnc0nKN_1FNDVnZ2dnUVZ_vKdnZ2d@earthlink.com> what he actually
said was:

]The tone of this (and other) responses seems to suggest "just stroke up on a
]convenient pair, and wait to see if the coordinated person/club complains".

That is also what appears in the article you replied to.

What YOU claim he wrote was something I wrote in a different
sub-thread. Yes, when what he actually wrote is replaced with something
I wrote, then what I wrote will look exactly like what you claim he said.

So, when I wrote:
>> No, that is not what was said at all. That is not the tone of what was
>> said, nor was it said directly.

I was replying to the actual statement made by K0HB. I did not say
"convenient", nor "just stroke up", nor "wait to see" if anyone complains.
I said that there WILL be nobody to complain about the use of an unused
coordinated pair, because there will be no interference to complain about.

A coordination owner can complain that someone is using "his" frequency,
but all I have to do is ask what interference I am causing. And then
I'll ask him what rule makes that "his" frequency. When he answers "none"
and "none", the complaint will have been dealt with.

>> If you know a pair where there is no active repeater, you are not just
>> "stok[ing] up on a convenient pair", you've picked the pair with an
>> explicit reason.
>
>How is this different than picking a pair where there's an active

>repeater, or a repeater that is temporarily down?

An unused pair is one where there IS NO REPEATER. That's how it's different. A pair with an active repeater on it is not unused. I've said that before.

>It's not your
>prerogative to "pick a pair", just because you think it's unused.

First of all, I did not say "because I think it's unused". I said a known, unused pair. That's not "think", that's KNOW. There is a difference.

Second, yes, the FCC gives ALL of us the prerogative of picking the frequency we operate on. With the restriction that I may not cause malicious or deliberate interference to another operator, and must operate within the CFR allocations, I am free to pick any frequency I wish, just as you are. Since I cannot possibly cause any kind of interference to a repeater that does not exist, I have met the limitation of "no malicious or deliberate". Since there is no repeater to interfere with, there is no action I am required to take under the section that deals with coordination, since the only required act is for the uncoordinated operator to solve any interference issues. There are none to solve.

If you think there is a rule that says I don't get to pick my own frequency to operate on, other than the limits I've already mentioned, please quote it. The one about coordination isn't it.

>That's what frequency coordination is for, and the reason it exists.

No. Frequency coordination is intended to mitigate interference issues. It can't solve them (because they sometimes create the problem themselves by coordinating two systems on the same pair too close together -- even professional coordinators sometimes do that.) They are there to identify the station who must act to solve interference issues. They do not grant exclusive rights to a frequency. They cannot. The rules do not allow it, and every 605 contains a statement that nobody owns a frequency. That applies to repeater ops, too.

>Of
>course you have an "explicit reason"; that doesn't give you the right to
>ignore the law. And yes, it is "the law".

Please quote the law that says I may not use an unused repeater pair. I cannot ignore a law that does not exist. In the meantime, I am obeying the "uncoordinated must solve interference" law fully, in both spirit and letter. I am ignoring or breaking no law.

>Yes, the FCC is going to listen to him, because he has the right to use
>that pair, while you do not.

Please quote the law that says THAT.

>You just don't understand the concept of formal frequency coordination,
>do you?

Yes, I do, and that insult was unwarranted.

>I am sure that in many areas there are repeater pairs that, in your
>eyes, would appear unused. It is the charter of the frequency
>coordinator to make that determination, not each individual ham.

I said "known unused". I did not say "in my eyes appears".

>It's too bad that we need formal frequency coordination and can't go
>with the concept of "no one owns any frequency". Experience has shown
>that the formality is needed in this case, and I your explanation of how
>you could just jump in and squat on any repeater pair because you want
>it is a fine illustration of how we got to this point.

This paragraph is a deliberate insult. I have never caused interference
to a coordinated (or uncoordinated) system, and never plan to, despite
your implication.

"This case" is not about the need for coordination because it is
not about interference. It is about the use of an UNUSED pair without
coordination. Since there is nobody using the pair, there is nothing
to interfere with. Since there is no interference, the law dealing with
who has to solve interference issues is moot. Even were the law to say
that the uncoordinated use must change frequency (which it does not)
there is no interference issue to force a change.

618. TV frequencies up for grabs- lets lobby now

In Feb 2009, all TVs will become digital. As a result, analog TV spectrum will become available.

It will be auctioned off. Chances are it will go to big companies, making their monopoly even bigger. These frequencies would be better used if it went to amateur radio, public non-license radio (like FRS and CB is now), and small business (such as letting small business offer commercial radio services).

Alot of innovative applications will result. And it will create jobs and new businesses that would otherwise not exist. Also, it would increase public interest and involvement.

If we do nothing, these frequencies will be lost. Lets lobby now.

You're about 4 years too late. The original date for the analog broadcast
TV shutdown was in 2006 - so the auctions were actually held before then.
However, Congress extended the date because few people even knew of it.

I went looking for discussion on what is likely to happen. Ivor points out that it will be 2012 before the change is made in the UK, yet the first article I found is from the UK. Apparently they're actually thinking about this, studying it, and examining what the best use would be for the resources. (See http://preview.tinyurl.com/3p3uvo)

US organizations are, too. At http://www.afterdawn.com/news/archive/10349.cfm I found this quote: Advocacy groups such as Public Knowledge and Consumers Union say the auction represents the best and last opportunity for large portions of the U.S. to have a third broadband provider that competes with the cable and telecom giants. These groups are asking the FCC to require that part of the auctioned spectrum be sold with so-called open-access rules attached, meaning the winner of the auction would have to sell wholesale access to the network to any company that wants it.

> These frequencies would be better
> used if it went to amateur radio, public non-license radio (like FRS
> and CB is now), and small business (such as letting small business
> offer commercial radio services).

Apparently 24 MHz of the available 84 MHz has already been earmarked for public safety. Is the current allocation of two-way public non-license or amateur-radio-license spectrum sufficiently saturated to justify additional allocation? Personally I don't think so, but maybe in urban areas things are different.

> Alot of innovative applications will result. And it will create jobs
> and new businesses that would otherwise not exist. Also, it would
> increase public interest and involvement.

What innovative applications would you anticipate? I don't see either commercial or amateur radio services expanding just because they have additional spectrum. Where's the demand? Who is going to buy radio service when they already have a cell phone in their hand?

> If we do nothing, these frequencies will be lost. Lets lobby now.

It's probably too late to do any effective lobbying on this issue. But the frequency spectrum won't be "lost"; it will be used somehow. The question is whether it will be used in the "best way".

Problem is, different people have different ideas of what the "best way" might be. I don't envy the FCC the policy task of walking the tightrope between letting market forces decide and placing curbs in place to prevent "big money" from becoming "bigger money".

This spectrum has already been sold. Except for the 24MHz worth that's being reserved for public-safety communications.

Some of the new uses have already been implemented. For example, Verizon's "V-Cast" (video broadcasts to mobile phones) uses the spectrum formerly occupied by TV channel 55. A number of TV stations have already closed their analog operations on this channel and adjacent channel 56.

Amateur Radio Newsline(tm) Report 1609 - June 13, 2008

The following is a closed circuit announcement and not necessarily for air. Hers amateur Radio Newsline's Support Fund administrator, Andy Jaremaa, N6TCQ:

--

We know you prefer to hear the news rather than having to listen to these announcements and we agree. But over the past few months almost all donations have ceased so here we our with our annual spring pitch.

As we have said so many times before, it takes money to gather the news. It takes money to assemble a newscast and it takes money to bring it to you. And as the price of goods and services continue to increase so do our operating costs. The cost of telephone service. The cost of web access.

We do our very best to keep operating expenses to a minimum. Everyone involved in the Amateur Radio Newsline is a volunteer. There is no paid staff. More important, all of the monies you donate go only toward operating expenses and in supporting the Young Ham of the Year Award. And for you, your donation is tax deductible.

We even make it very easy to donate. If you have web access all you need to do is take your web browser to www dot arnewsline dot org. Then click on the words "Make A donation" and use your Pay-Pal account or credit card to transfer into ours.

Or you can use the good old method of writing a check and sending it to Amateur Radio Newsline Support Fund, Post Office Box 660937, Arcadia California, 91066.

Either way, we thank you for your kindness. For your support and for your trust.

I'm Andy Jarema, N6TCQ.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1609 with a release date of Friday, June 13th, 2008 to follow in 5-4-3-2-1.

The following is a QST. Amateur radio responds as savage weather hits the Mid Western states, the BPL fight continues in South Africa, the FCC reminds us that its O-K to record ham radio and C-B transmissions and hams in the Big Apple are again the communicators for the city's Salute To

Israel parade. Find out the details on Amateur Radio Newsline(tm) report number 1609 coming your way right now.

RESCUE RADIO: HAM RADIO RESPONDS TO MIDWEST STORMS

Ham radio was among the first responders as severe weather battered the mid Western United States starting on June 4th. Amateur Radio Newsline's Jack Parker, W8ISH, is in Indianapolis, Indiana, which is one of the states hard hit by Mother Natures fury:

--

From Indianapolis, south to the Kentucky line Indiana residents have been surrounded by fast rising flood waters this past week. Torrential rains from slow moving storms dumped up to 11 inches of water on Hoosier communities across the southern part of Indiana.

Dozens of Amateur Radio operators were activated in response to calls from various county emergency operations centers. Rising waters have closed many county roads across the region.

In Johnson County, just south of Indianapolis, amateur radio operators were asked to report closed roads and bridges damaged by fast moving water. A total of eight bridges were severely damaged and one dam was breached forcing evacuations from a small lake community. By noon Saturday most major highways and county roads were closed due to waist high water. Water rescue units sent to evacuate neighborhoods had a hard time getting equipment to those in need.

Hams in Columbus and Seymour, Indiana provided communications to evacuation shelters. Several times they had to tear down and re-locate as those shelters were closed and moved to higher ground. The rain just kept coming. By Monday weary amateur radio operators were calling for relief as more shelters were opened or continued to operate.

It has been a busy month for Indiana ham radio operators. A week before the floods many of the same areas were raked by devastating tornadoes. Again, Amateur Radio communications was put to the test while providing emergency communications to area shelters and emergency management agencies across the state.

Rescue operations became so numerous local fire departments, the Department of Natural Resources and the Indiana National Guard were swamped with requests. The US Coast Guard dispatched rescue helicopters from Chicago while a contingency of US Marines located at Camp Atterbury near Columbus, Indiana postponed their training mission and began assisting with water rescues in Morgan County. The Marines are from Camp LeJune in North Carolina. They too fell victim to the tornadoes and local flooding. Their large Chinook helicopters flew search and rescue missions for several affected counties.

According to the National Weather Service records this is the worst flooding Indiana has seen since 1913. And it may not be over yet. All those flood waters are now flowing down stream causing new problems to Southern Indiana communities.

Reporting for Amateur Radio Newsline, this is Jack Parker W8ISH.

--

We will have more on this story in upcoming Amateur Radio Newsline reports. (ARNewsline(tm), W8ISH)

RESCUE RADIO: RACES ASSITS IN NJ ANIMAL RESCUE DRILL

Emergency service workers handling large animals during an a disaster. That was the theme of a preparedness drill in central New Jersey on Sunday afternoon June 8th. One that involved not only horses, ponies, goats, alpacas, donkey and young cow, but ham radio operators as well.

The exercise consisted of evacuating and registering the animals in a shelter set up at the Hunterdon County Fairgrounds. About 40 volunteer members of a local County Animal Rescue Team took part. Communications for the operation was provided by members of the County's Radio Amateur Civil Emergency Service group

The scenario for the exercise was the imaginary collision of a car with a train at the crossroads in Franklin Township. The accident supposedly caused the train carrying hydrochloric acid to derail with the toxic acid leaking out and leading to a general evacuation of the area. The ham radio equipped County Animal Rescue Team had responsibility of evacuating the animals in the affected zone.

By the time the drill had been completed, more than a dozen animals volunteered by their owners, had been transported to the fairgrounds and registered. The complete story s on-line at
http://www.mycentraljersey.com/apps/pbcs.dll/article?AID=/20080609/NEWS/806090320/1002/NEWS03
(mycentraljersey.com)

RESCUE RADIO: CHECKLISTS AND COMMON SENSE

Checklists, Common Sense and Experience is the title of an excellent article appearing in the July issue of Worldradio Magazine. In it, the magazine's Emergency Communications column author Jerry Wellman, W7SAR, gets away from the nuts and bolts of being prepared to respond in time of crisis. In this column he looks as emergency preparedness from a very personalize point of view.

To quote one key line that stands out, Wellman credits a reader as stating: "The ideal emergency response is a collection of individuals with

skills to improvise and think and not rely on checklists and kits that probably won't be at hand anyway.

Wellman says that he is not advocating abandoning checklists to be sure an emergency responder has what he or she needs. But he indicates that the most important tool in a go kit may not be in the bag a responder carries. Rather, its that persons ability to think on the run as a situation changes.

The article is a must read for hams involved in emergency response work or for any ham who might one day be in the position of having to be an emergency communicator. It begins on Page 24 of the just out July issue of Worldradio Magazine. (Worldradio)

**

THE BPL FIGHT: SARL OBJECTS TO PROPOSED BPL RULES

Broadband over Powerline is in the news again. This with word that the South African Radio League plans to attend an upcoming hearing on the future of BPL Internet access in that nation.

The hearings will be held on June 18th and 19th According to South African telecommunications regulator ICASA the public gathering will discuss the draft regulations published this past February 7th for Technical Standards for Power Line Telecommunications operations.

After the publication of the draft regulations in the Government Gazette, South African Radio League and South Africa's HamNet submitted objections to certain aspects of the draft regulations. The main dissatisfaction is the lack of compulsory notching of amateur radio frequency allocations, limits which are too low to offer adequate protection and the dispute resolution process.

The draft regulations and the ham radio objections to them are available on www.sarl.org.za. Just click on the words PLC slash BPL. (SARL)

**

RESTRUCTURING: EUROPE HARMONIZES 3400 TO 3800 MHZ

The European Union has released its decision on the restructuring or harmonization of 3400 to 3800 MHz. This for use in terrestrial systems capable of providing electronic communications services to the European community.
.
The Commission Decision of May 21st says that no later than six months after the document takes effect that member states will designate and make available, on a non-exclusive basis, the 3400 to 3600 MHz band for terrestrial electronic communications networks. Then by January 1st, 2012 member states will expand the spectrum availability up to 3800 MHz . I both cases the band allocation will be made in compliance with the parameters set out in the appendix to the decision.

In European terms harmonization equates to agreeing on a way to use the spectrum at hand. (Southgate)

RADIO LAW: YES ITS OK TO RECORD AND DIVULGE HAM AND CB COMMS

Is it legal to record and divulge the content of ham radio and C-B radio communications? That's a question often asked by newcomers to ham radio or by those hams involved in chasing down malicious interference. FCC rules man Bill Cross, W3TN, says that the answer is yes, it is:

--

Cross: "There is an exception in the Communications Act -- I believe it is Section 706 of the Act -- Its called Privacy of Communications -- and it is a ection that was enacted in the early part of the (last) century that basically was designed so that radio operators aboard ships or other people that had to relay a message were not supposed to use that information or divulge it to someone else. But at the very end of it there is an exception and its an exception for the Amateur Service and the Citizens Service.

"The import of it is that it does allow the recording of amateur to amateur communications on the amateur bands. And that's really a part of the whole
mentality we have of self policing and looking after ourselves and being able to report violative communications. But its an exception right there in the Act."

--

The bottom line is that if you hear a major violation of the Part 97 Amateur Service rules, don't be afraid to record it and then send the tape or CD to the FCC. (ARNewsline(tm))

**

ENFORCEMENT: BROOKLYNITE ORDERED TO PAY $1000 FINE FOR UNLICENSED STATION

The FCC has affirmed a $10,000 fine issued against New York resident Trevor Whitley. This, for what the Commuision terms as willfully and repeatedly violating Section 301 of the Communications by providing services and facilities incidental to the unlicensed transmission of communications by radio.

On January 25, 2008, the Commission's New York Field Office issued a Notice
of Apparent Liability for Forfeiture in the amount of $10,000 to Whitley for playing hot to an unlicensed transmitter operating on 102.3 MHz in Brooklyn, New York. To date, Whitley has not filed a response to the N-A-L or paid the proposed forfeiture. So, based on the evidence before it the FCC has ordered Whitley to pay the fine within the usual time period or to file an appeal. (FCC)

**

ENFORCEMENT: DON'T OPERATE OUT OF BAND AGAIN

A California ham has been warned by the FCC that future instances of out of band operation will result in enforcement action against his license. In its May 20th letter to Frederick C. Severa, AH8I, of Chico, the FCC notes that back on March 1st 2007 it forwarded to his address of record in Pago Pago a complaint regarding out of band operation. The FCC says the letter was returned unclaimed.

The FCC says that finally a letter was sent to Severa at his Chico, California address on March 27, 2008 reached him. On April 25th AH8I replied. In his letter Severa stated that he had operated out of band only because it was dark in the vehicle and apparently he experienced a problem with improper VFO selection of the transceiver that he was using.

The FCC has accepted this explanation as being reasonable. In addition to warning Severa to not operate out of band the FCC also has instructed him to update his license records indicating the address at which he will receive Commission mail. (FCC)

**

RADIO LAW: CANADA AND MEXICO NOT SWITCHING TO ALL-DTV FOR YEARS

The United States may have next February cast in concrete for the final switchover from analog to digital television broadcasting, but its going to be a while before our neighbors to the North and to the South join us. Bill Pasternak, WA6ITF, has the rest of the story:

--

Canadian telecommunications regulators say that it will be at least another three years before any digital switchover takes place in that nation. And this only after Canada's broadcasting authority ruled that television stations would be forced to switch to ATSC digital broadcasting by August 31 2011. And then then there are a number of minor exceptions to this date. This for broadcast operations in remote areas where analogue transmissions will not cause interference to the new digital services.

As to Mexico? Don't even think digital for another quarter of a century. As of this writing, Mexico has no plans to switch to digital television until sometime in 2022 at the very earliest, and that's just for
a start-up date. It could take many more years before that nations digital

transition is completed. And while Mexico has said that it will likey go with the ATSC system that is prevelent in North America, 25 years gives that nation a lot of time to explore alternative systems such as Europe's OFDM.

For the Amateur Radio Newsline, I'm Bill Paasternak, WA6ITF, in the studio in Los Angeles.

--

By the way, for those interested, Luxembourg was the first country to complete the move to all digital broadcasting. That happened almost two years ago on September 1st, 2006.

For more information on the DTV changeover worldwide, see http://en.wikipedia.org/wiki/Digital_switchover (CGC Communicator, Wikipedia)

HAM HAPENINGS: TECH PAPERS SOLICITED FOR DCC

Technical papers are solicited for presentation at the 27th Annual ARRL and TAPR Digital Communications Conference to be held September 26-28, 2008 in Chicago, Illinois. The submission deadline is July 31, 2008. Please send papers to Maty Weinberg, at the ARRL, 225 Main Street, Newington, Connecticut, 06111.

**

RADIO BUSINESS: KENWOOD AND JVC TO MERGE BY OCTOBER

Kenwood and JVC say that their proposed merger will be completed by this fall. Will this lead to a new high frequency radio from the labs at Kenwood Communications? Jeff Clark, K8JAC tries to provide an answer:

--

While nobody will say for sure, at least one reason that Kenwood has not introduced a new, high end high frequency transceiver to rival offerings from Icom, Yeasu and newcomer Heiberling could have to do with aspects of the companies business that have nothing directly to do with ham radio. Rather some are speculating that it might have been the merger of Kenwood with the Victor Corporation of Japan that may have at least temporarily sidelined any major high frequency Kenwood product introductions this year.

According to a joint news release the two Japanese electronics giants will combine to form JVC Kenwood Holdings. The new corporation will have its headquarters in the city of Yokohama. The new model business will focus on car electronics, home electronics, and professional wireless systems, and will also explore new product segments.

In an earlier statement by Kenwood it was stated that the merger would have no impact on the company's continuing support of the amateur radio

marketplace.

I'm Jeff Clark, K8JAC.

--

The two companies appear to be combining to reduce operating costs while scaling distribution in the already crowded world-wide consumer electronics market. (News.com, Southgate)

**

RADIO BUSINESS: MOBILE CONSUMER ELECTRONIC SALES CONTINUE TO GROW

And speaking about the world of consumer electronics, it looks as if the publics desire to own the latest and greatest in mobile electronics is a thirst that just cannot be quenched. This, even with a the price of gasoline reaching astronomic levels. Amateur Radio Newsline's Don Carlson, KQ6FM, has the details:

--

Sales of in-vehicle consumer electronics will grow at a rate of 13 percent in 2008 to more than $12.8 billion. That's the prediction of a study released by the Consumer Electronics Association.

In the study, "Automotive Electronics What Consumers Have and What They Desire," the Consumer Electronics Association said the typical American spends nearly 17 hours a week in a car. As a result, 38% of the driving age population intends to buy and install an in-vehicle product over the next year.

Topping the list at 15% are remote vehicle starters. That's followed by in-dash navigation systems at 13% and car alarms accounting for 12%. But says the Consumer Electronics Association there are also strong purchase intentions for technologies like HD Radio, satellite radio and DVD players.

In Reno, I'm Don Carlson, KQ6FM

--

The study also predicts that consumers are actually more likely to spend money on products that are not permanently installed in vehicles. They say that this signals a desire for flexibility and multi-location use when it comes to buying consumer electronic products, according to the trade group. (RW)

RADIOSPORT: ARDF CHAMPIONSHIP SEPT 2 - 7 IN KOREA

The 14th World Amateur Radio Direction Finding Championships take place September 2nd to the 7th at a location near Seoul, Korea. If your team wants to participate in the event and you have not sent the letter of intent yet, please send it as soon as possible to the sponsoring group.

Full details and the needed form can be found at www.2008ardf.org. You should fill the category, name, callsign, date of birth and passport number of participants in the application and send it back via e-mail no later than July 30th. (Southgate)

**

CHANGING OF THE GUARD: ANTENNA DESIGNER DJ9BV - SK

The changing of the guard in amateur radio continues. This with the sad news that VHF and UHF antenna designer Rainer Bertelsmeier, DJ9BV, has passed away following a long illness.

Well known for his work on VHF Yagi's and other designs, DJ9BV was in charge of the highly respected VHF magazine Dubus until becoming too ill to continue. He was near the top of the 70cms listings, active on modes such as EME and was considered as being a wealth of knowledge that will be missed by all VHF and UHF operators. (Southgate, DJ0QN)

EMERGING TECHNOLOGY: LIVE HOLOGRAM PRESENTATION DOWN UNDER

Call this one its shades of the fabled star ship Enterprise's Holideck. But in this case its real and its now been demonstrated down-under. Here's Graham Kemp, VK4BB:

--

In an Australian first, Telstra has used a hologram to beam its Chief Technology Officer, Dr Hugh Bradlow, live into Adelaide from Melbourne to talk at a major function for senior business executives.

Dr Bradlow addressed and interacted with the audience for around 15 minutes and conducted a real time media conference following the function.

Staging Connections in collaboration with Telstra, Bytecraft Entertainment and in partnership with Musion Australia combined their respective experience and know-how to deliver this exciting industry first, which represents a new generation of video conferencing innovation in Australia.

Group Managing Director for Telstra Enterprise and Government, David Thodey,said "We've all seen this sort of thing in futuristic sci-fi movies, but the reality is that it can be done here and now, as we have just

demonstrated, because of the scope and capability of Telstra's world leading networks.

For the Amateur Radio Newsline, I'm Graham Kemp, VK4BB, of the WAIA News in Brisbane, Australia.

--

Telstra is Australia's leading telecommunications provider. The hologram was delivered over its high speed network using the Musion Eyeliner System. This is a high definition holographic video projection method that allows three-dimensional moving images to appear within a live stage setting. And you thought it was only Hollywood movie magic. (WIA News, Telstra national media release 146/2008)

HAM RADIO IN SPACE: A FREE RIDE TO ORBIT

Cubesat satellites built by students from universities in Belgium, France, Italy, Poland, Romania, Spain and Switzerland have been selected for a free ride to low earth orbit. The launch is scheduled on the maiden flight of the European Space Agency's new Vega booster from the ESA launch facility in Kourou, French Guiana.

Tentative date for the mission is late this year or in early 2009. The cubesat from Belgium is among the most interesting. It proposes to use D-Star as it's communications protocol. This in the hope of bringing digital ham radio voice communications into space.

More is on-line at: http://www.esa.int/esaED/SEM2BPUG3HF_index_0.html (ANS)

**

HAM RADIO IN SPACE: CUTE 1.7 DIGI IN TEST MODE

The Amateur Radio digital repeater function is now being tested on the Cute-1.7 cubesat. Information supplied to AMSAT by the satellites controllers say that they are currently testing an amateur digital repeater and a test message is being transmitted. FM packets are downlinked on 437.475MHz. Information on the and packet formats is available at http://lss.mes.titech.ac.jp/ssp/cute1.7/fm_mode_apd_e.html (Tokyo Institute of Technology)

**

RADIO NEAR SPACE: AN ALASKAN B.E.A.R. GRANT .

The Alaska Space Grant Program intends to expand a near space project called B.E.A.R. into a larger program. One that will allow University of Alaska Fairbanks students the opportunity to fly payloads of their own design, and to conduct atmospheric research in the spring and fall.

B.E.A.R. is an acronym for the Alaska-based Balloon Experiment And Research Program. It's a joint effort of the Alaska Space Grant Program and the

Arctic Amateur Radio Club have formed December 2007. The program's aim was to launch a high altitude balloon equipped with several amateur radio projects as payload in the spring of 2008. On May 10th the balloon was launched and reached an altitude of 95,327 feet above Fairbanks. The balloon had three payloads in tow, all built and designed by Dan Wietchy, KL1JP. While in flight the balloon's ham radio gear captured more than 100 photos and some video which was returned to Earth.

The balloon parachuted back to Earth. It was found less than seven miles from where it was launched at Poker Flat Research Range.

Faculty from the Geophysical Institute already say that they are interested in designing graduate-level courses. Ones that will take advantage of this new method to bolster hands-on student research into near space. (Eureka Alert)

WORLDBEAT PORTUGAL: NEW D-STAR MACHINE ON THE AIR

CT1DQV says over the D-Star remailer that a new D-Star repeater is operational in Portugal at Serra do Leiranc. That's at 1146 meters above sea level at a site is located between Chaves and Boticas, in northeast area of that nation.

The new Portuguese D-Star system uses the call CQ0DCH. Its input is on 430,975 MHz and it transmits on 438,575 MHz with a 7.6 MHz split between its input and output frequencies. Its licensee, ownership and maintenance responsibility is in the hands of the Associano de Radioamadores do Alto Tamega. It will be a while before it joins the world wide D-Star gateway operation. (D-Star Remailer)

**

WORLDBEAT - UK: NEW FAST SCAN ATV STREAMING SITE

The British Amateur Television Club has announced a new amateur television streaming video Web Site. It designed to bring streamed fast scan ATV to the internet and allow cross repeater operation while working from its multi screen display. The site, located at www.batc.tv. will also carry a library of ATV programs and will act as a port for other ATV events to be streamed from around the world. (RSGB)

**

ON THE AIR: MALAYSIA SCOUTING SPECIAL CALLSIGNS

On the air listen out for eighteen Malaysian scouting special callsigns to be on air the rest of this year. This, in conjunction with the centennial anniversary of scouting in Malaysia and the World Telecommunication & Information Society Day 2008.

To help celebrate these events the Scouts Association of Malaysia has been granted eighteen never-heard-before heard special event callsigns with the

9M1CS prefix and suffix plus one other letter in the suffix. The callsigns are valid until December 31st, and will be used for the on air scouting jamborees. The Malaysian Amateur Radio Transmitters' Society will provide QSL Bureau services for most of the stations. Details are available http:\\jota.scouts.my. (Southgate)
**

DX

In DX, word that members of the the Spanish Amateur Radio League are active fro, Timor Leste as 4W6R through June 24th. Operations is on 160 through 6 meters, using CW, SSB and RTTY. The plan is to have two stations on the air at all times. QSL as directed on the air.

M0AEP, will be active from Montserrat signing VP2MDD through June 19th. He will be on 80 through 6 meters using various modes. QSL via home call, direct or via bureau.

Lastly, the special call sign TM4OO will be active from France through June 15th. This, to celebrate the 400th birthday of the city of Quebec. QSL this operation only via the bureau.

(From various DX news sources)

PUBLIC SERVICE:: HAMS COMMUNICATE FOR NYC SALUTE TO ISRAEL PARADE

And finally, its one of New York City's cultural events and as in years past, ham radio has again provided a communications network for the annual Salute to Israel Parade. This years event took place on Sunday, June 1st and Amateur Radio Newsline's Mike Lisinco, N2YBB is in the Big Apple with more:

--

The ham radio communications nerve center for this years Salute to Israel Parade was in a multi-radio equipped van located at 68th Street and 5th Avenue in Manhattan. According to Steve Ostrove, K2SO, who is the amateur radio Communications Coordinator for the event, the ham radio network began operation at at 9 a.m. and finished at 5 p.m. Ostrove tells Newsline that five hams were assigned to the parade announce locations while others shadowed V-I-P's and event officials. One operator even had had on roller blade skates for his shadow job which K2SO said to proved to be very successful.

Ostrove says that he knows of only one call for medical aid handled by the ham radio network. Most of their job consisted of relaying information for the parade announcers, locating missing materials and all of the other incidental utility communications for an event of this scope.

The Salute to Israel Parade began in 1964 when handful of people walked along Manhattan's West Side Highway in a show of support for the State of Israel. In the mid 1960's the event had grown into a full scale cultural

event on Manhattan's 5th Avenue with thousands of marchers that included bands and floats. It was then that parade organizers approached the late Lou Belsky, K2VMR, to ask his assistance in providing communications for the event after a trial using 11 meter C-B radio gear proved unsuccessful.

In its early years K2VMR built the communications network was on 6 meter A.M. on 50 point 4 Mhz. Ironically that was the old Brooklyn, Kings County ARES net frequency and was chosen only because most hams operating mobile in the New York City area carried it in their radios.

By 1970 the ham radio communications for this event had moved to 2 meter F.M. as that mode became dominant nationwide. The current ham radio communications network is an outgrowth of those early years but refined to use the latest in ham radio communications technology. It's a network that
Steve Ostrove, K2SO, and others have been improving over the years.

For the Amateur Radio Newsline, I'm Mike Lisenco, N2YBB, in New York. 73 and Shalom.

--

This years parade also happened to coincide with the 60th anniversary of the creation of the State of Israel and making it the biggest in the events history. There were some 100,000 participants marching up Fifth Avenue cheered on by over one million spectators. And behind the scenes was a small group of ham radio communications volunteers making sure that every detail of the parade was just as it was supposed to be. .

More information on the Salute to Israel Parade is on-line at www.salutetoisrael.com

A article detailing Steve Ostrove, K2SO, life, career and involvement in the parades communications effort can be read at www.njjewishnews.com/njjn.com/052908/njAHamHandle.html (ARNewsline(tm) with information supplied by K2SO and historic information from ex-WA2HVK)

An emergency service organization should put up and maintain their own repeaters. For example, in the last 3 years, the Southern Nye County (NV) ARES group put up and maintain four repeaters (2 on 2M and 2 on 70cm) so we will have them in emergencies. We make a point to talk on them at least once a day to make sure they work. But 99% of the time they are idle, and thus may appear to the casual observer to be unused.

==> HAMS ON HAND AS FLOODS SWEEP ACROSS MIDWEST US

When severe thunderstorms started to threaten the Midwestern United
States with tornadoes, hail, severe lightning and rain starting on June
4, state agencies were quick to call on Amateur Radio operators for
assistance.

The Indiana Department of Homeland Security (IDHS) activated ARES
members to help out with communication efforts, providing radios for
those amateurs who offered to help. ARRL Indiana Section Emergency
Coordinator Tony Langer, W9AL, said hams were instrumental in many ways,
including assisting in Emergency Operations Centers, sand bagging,
```

helping out in shelters and even aiding in rescue efforts.

This storm brought 12 confirmed tornadoes to 11 Indiana counties, with some communities reporting up to 11 inches of water, Langer said; 20 counties were under a State of Emergency. On June 9, President Bush declared 29 counties in central Indiana a major disaster area, opening up the region to receive federal aid and FEMA assistance. Four people perished in the storms.

In a call put out to Amateur Radio operators on June 8, IDHS said, "The flood waters have impacted several counties here in Indiana severely. Ham Radio operators have been operating continuously since activated and are growing weary. Some counties do not have a vast amount of active hams to relieve these tired operators." Specific areas needing amateur assistance were overnight relief operators at the Bartholomew County EOC, as well as the EOC and three shelters in Columbus County.

Marion County (Indiana) Emergency Coordinator Mike Palmer, N9FEB, called on ARES members in his area to help out. "People might think, 'Why not just use telephones or cell phones?' Well, many phones are not working down there at this time. With the high waters, electric transformers are out all over; even those servicing cell towers are out. Even with today's technology, we find ourselves looking at ham radio to assist. If you can spare a few hours or an entire evening, please consider helping."

Indiana Governor Mitch Daniels called in the United States Coast Guard to assist in evacuations and rescues. The Coast Guard responded by sending two helicopters to the state along with boats and personnel. The Indiana National Guard was called out to assist in evacuation and direct traffic and enforce road blocks on the many flooded roads.

Torrents of rain also brought flooding to Wisconsin. On June 9, five counties had requested aid from Amateur Radio operators, ranging from backup communications to disaster assessment and flooding communications. One county called on ARES members to provide patrols of the flooded areas overnight on Tuesday and Wednesday.

According to ARRL Wisconsin Section Emergency Coordinator Bill Niemuth, KB9ENO, approximately 90 ARES members responded to the call for assistance. "In Columbia County, ARES members provided dam monitoring communications early in the flooding. These communications gave critical information to public safety officials about two dams that were nearly compromised. Due to falling water levels, this activity has been discontinued, but hams remain on standby due to the threat of additional heavy rain," Niemuth said.

Richland County ARES members remain activated, Niemuth said. "Hams are providing a variety of services, including fielding information calls in the County's Emergency Operations Center and providing specialized communications for disaster assessment by hover craft and airplane. These communications are in addition to providing traditional ham radio

communication links between the EOC and evacuation shelters."

On Thursday, June 12, more rains inundated the state and more counties requested aid from area Amateur Radio operators. Niemuth said Winnebago County ARES members are providing damage assessment assistance in the county and in the City of Oshkosh, while hams in Fond du Lac are helping out with shelter communications. ARES teams in Marquette and Outagamie are providing back-up communications and flooding reports to their respective Emergency Operations Centers. -- Information provided by ARRL Indiana Section Emergency Coordinator Tony Langer, W9AL, and ARRL Wisconsin Section Manager Don Michalski, W9IXG

==> "WE DO THAT" WITH AMATEUR RADIO

The third ARRL Public Relations campaign -- "We Do That - with Amateur Radio" -- celebrates the technology side of ham radio <http://www.hello-radio.org/wedothat/>. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio means many things to many people. "What is it about Amateur Radio that arouses the interest of people?" Pitts asked. "You have the fun, friendship and hobby side. We showcased this side in 2006 with our 'Hello' campaign <http://www.hello-radio.org/hello/>. You have the emergency service side. We brought this valuable part of Amateur Radio to the public's eye in 2007 with 'Emergency Radio -- Getting the Message through for Your Family and Community' <http://emergency-radio.org/>. And now you have the technology and creative side. In 2008, we are capitalizing on this third prong, getting word out to the public that there is tons of stuff you can do with Amateur Radio."

Unveiled at the 2008 Dayton Hamvention this past May, this new coordinated public relations effort shows the world the technological activities and creative imaginations that Amateur Radio's people love. Like the previous public relations campaigns, Pitts said, this is a campaign with several interlocking parts.

* Public Service Announcements
There are Public Service Announcements (PSAs) that commercial radio stations can utilize, getting word out to the public about the benefits that ham radio operators can provide. Check these out on the ARRL Public Information Officer Web site <http://www.arrl.org/pio/>; more will be coming out as the year unfolds. These mp3 files are easily downloaded and can be taken to local radio stations. "Many radio stations have a public service obligation they need to fulfill, and these PSAs are a great way for them to do so, while showcasing the neat things we do as hams," Pitts said.

* Brochures
ARRL has created an attractive brochure that celebrates ham technology <http://www.arrl.org/brochures/>. This brochure shows hams doing many exciting activities, from Green Radio -- Amateur Radio using renewable energy sources -- to the search for extraterrestrial intelligence (SETI) through time and space itself. These brochures, in packs of 25, are

available at no cost except for a small shipping fee.

* WeDoThat-Radio.org
A new special Web site has been created just for this campaign. "Maximizing the strong points of the Hello-Radio and Emergency-Radio Web sites before it, WeDoThat-Radio.org <http://www.wedothat-radio.org/> uses some of the newer technologies similar to the blog format, allowing for easy topic additions and changes, even providing a place for visitors to ask questions," Pitts said.

* Stickers
Let's admit it, hams and kids like free things and stickers are fun. So we made up a bunch to share. If you happen to have a presentation to students, it's a nice touch. These are "free while the supply lasts," Pitts said.

* "Talk on a Disk"
What began as an experiment in 2007 has since become a major success. The ARRL's "Talk on a Disk" was quickly snatched up and used by people making presentations to groups. This CD contains all the materials you need to make a good PowerPoint presentation before a non-ham group, including slides and supportive audio and video. "For 2008, we created a brand new 'Talk on a Disk' highlighting the technology campaign and coordinated with the brochures. It can make almost anyone look good in front of a group. Just follow the script! Or, you can modify it to meet local needs," said Pitts. If you have a presentation to make and want to talk about the technology of ham radio, please e-mail Pitts about it <apitts@arrl.org>.

* "Swiss Army Knife for PIOs"
The 2008 "Knife," Pitts said, is actually a CD with all the basic forms and information a Public Information Officer (PIO) should need -- all in one place. "Last year, we produced more than 1000 of these and they were all snatched up," Pitts said. With audio and video files, documents in computer forms that PIOs can modify to meet local needs, as well as hundreds of pointers and ideas, the "Swiss Army Knife for PIOs" has become a mainstay for public relations work. Disks are available for PIOs by sending Pitts an e-mail <apitts@arrl.org>.

* Every Ham is a PIO
"There is a saying," Pitts said, "that all news is local -- and it is true. If there is not a local or personal 'hook' to a story, it does not make it into the news. Because of this, the Public Information Officers in your area are critical to the local perception of Amateur Radio." When PIOs take these materials and modify them for local use, it affects everything from antenna regulations to club membership levels. But it is not just up to the PIOs to achieve positive publicity for hams, Pitts said. "There is another saying, 'Every ham is a PIO.' When people become curious about Amateur Radio they turn to the first ham operator they find and that conversation is crucial to the future. All the brochures, TV ads, radio and news stories are of no benefit if that initial conversation with a potential recruit is not positive. PIOs can only

'bring the fish to the boat.' It is up to every ham to be ready to bring them in by taking the time and effort to make the initial one-on-one contact a positive experience. In the end, 'It takes a ham to make a ham.'"

* Need Help?
There is a wealth of materials available on the ARRL PIO Web site for anyone to use <http://www.arrl.org/pio/>. Here you can find background information handouts for media, as well as all sorts of helpful files and tips. Each month, Pitts puts out "CONTACT!," an e-zine for ARRL PIOs that contains ideas, information and timely materials. The ARRL Public Relations Committee is also able to aid groups facing unusual problems or situations. These PR veterans have a wealth of knowledge you can draw upon. There is a public relations email reflector where PIOs from around the country share their problems, ideas and successes with other PIOs.

* It's Up to You
The energies that your club -- and you as an individual -- put into positive PR work will pay off for your radio future in many ways, Pitts said. "Go show the world that 'It's not just your grandfather's radio anymore.'"

==> LOOK FOR THE JULY ISSUE OF QST IN YOUR MAILBOX

The July issue of QST is jam-packed with all sorts of things today's Amateur Radio operator needs. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

John Stanley, K4ERO, discusses how looking at signals can improve our ability to listen to them in the second of his two-part article "The Beauty of Spectrum Analysis -- Part 2." Jack Morgan, KF6T, takes a look at a two element 15 meter Yagi that works great in the field. ARRL News Editor S. Khrystyne Keane, K1SFA, gives her impression on the sights, sounds and smells of the 2008 Dayton Hamvention in her article "Dayton Hamvention 2008: Wow, What a Show!"

Former ARRL Senior News Editor Rick Lindquist, WW3DE (ex-N1RL), reviews FlexRadio System's FLEX-5000A HF/50 MHz transceiver. According to Lindquist, "The FLEX-5000A builds on the success of the SDR-1000, retaining the top-shelf radio performance and adding features. The package is far less complicated, shedding the many wires, cables, boxes and connectors that characterized the SDR-1000. Be prepared to experiment with the software and settings to get the most from this radio."

If it's July, it must be time for the IARU HF World Championships <http://www.arrl.org/contests/rules/2008/iaru.html>. This is a great opportunity to contact many stations all over the world, especially the headquarters station of IARU Member Societies, including W1AW. ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at what you can do in the "contest off-season" to spruce up your shack and get those

antennas and feed lines ready for the fall in "This Month in Contesting." The results of the 2007 ARRL 10 Meter Contest, the 2008 ARRL RTTY Roundup and the 2008 ARRL January VHF Sweepstakes are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

Of course, there are the usual columns you know and love in July QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Technical Correspondence, Hamspeak and more. Look for your July issue in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> GET READY TO RIDE THE WAVES AT THE 2008 ARRL FIELD DAY

The 2008 ARRL Field Day <http://www.arrl.org/fieldday> will be here before you know it, so now is the time to grab your rig, hang ten (a dipole or two will do) and plan to Ride the Waves June 28-29. Field Day packets can be downloaded from the ARRL Field Day Web site <http://www.arrl.org/contests/forms/fd-2008-packet.pdf>.

ARRL Field Day Manager Dan Henderson, N1ND, reminds clubs and groups that the deadline to order exhibit kits is drawing near. "We need to have all orders for kits and brochures no later than Tuesday, June 17. If we have your order by then, we will be able to package your order and get it to you in time for Field Day. Any orders received after June 17 will be fulfilled and may make it to recipients before Field Day," he warned. Exhibit kits can be ordered online <http://www.arrl.org/brochures/> at no cost; there is a small shipping and handling fee.

If you are looking for a Field Day site to attend, or are looking to publicize your Field Day site, be sure to check out the Field Day Site Locator <http://www.arrl.org/contests/announcements/fd/locator.php>. For more information on this new service, please check out the Locator Site Frequently Asked Questions (FAQ) Web page <http://www.arrl.org/news/stories/2008/06/03/10021/?nc=1>. "More than 1100 Field Day sites have registered their sites on the Locator, with more being added every day," Henderson said.

ARRL Field Day is the most popular on-the-air operating event in Amateur Radio. On the fourth full weekend in June, tens of thousands of Amateur Radio operators gather for a public demonstration of our service. Field Day is part educational event, part operating event, part public relations event -- and all about fun!
Amateur Radio is about knowledge and growth. It is a hobby and service that truly offers "something for everyone." Amateur Radio embraces both the old and new. While CW may no longer be a testing element, it is still a strong and favorite operating mode for many. Many operators are embracing digital technologies -- from RTTY, to newer digital modes like PSK31 and Olivia. Phone operation also has new frontiers to be explored

with digitized voice, VoIP and IRLP. And this is why Field Day -- the largest annual on-the-air operating event -- is so exciting. It gives all -- the old timer and the newcomer, the brass-pounder and the computer-assisted operator -- the chance to share and teach the broad range of modes and technologies we find in Amateur Radio.

Field Day is truly the time in which we bring Amateur Radio to Main Street USA <http://www.arrl.org/news/features/2006/03/01/1/>. By setting up in parking lots, malls, Emergency Operations Centers, parks and even at home, Amateur Radio operators learn skills that will allow them to better serve their communities. Setting up in these public venues gives added public relations value -- their friends and neighbors can see and experience the fun and public service capability that their "ham radio" neighbors bring to the community.

==> SPRING FREQUENCY MEASURING TEST (FMT) RESULTS ANNOUNCED

The results for the W1AW Frequency Measuring Test (FMT) <http://www.arrl.org/w1aw/fmt/> held on May 21, 2008 are in <http://www.b4h.net/fmt/fmtresults200805.php>. Announced and reported completely online <http://www.arrl.org/news/stories/2008/04/29/10071/?nc=1>, the spring version of the exercise attracted 81 participants. The object was to measure the frequency of an audio tone, given the frequency of the transmitted signal's carrier. Since digital modes based on frequency-shift keying (FSK) require precise tuning, being able to measure frequency is an important skill.

The actual frequency of the tone was 1240.3 Hz for all of the W1AW transmissions. The majority of the participants reported frequencies within 1-5 Hz of the exact value, a 0.08 to 0.4 percent error. Participants could use a variety of measurement techniques, some of which are described in the November 2004 QST article announcing an FMT with a similar focus <http://www.arrl.org/w1aw/fmt/2004/04fmtsilver.pdf>. The online results include detailed descriptions from many stations of the methods and equipment used to make the measurements.

W1AW Station Manager Joe Carcia, NJ1Q, plans to run additional FMT exercises on a regular basis, so watch the ARRL Web Site <http://www.arrl.org> for future announcements. If possible, a West Coast station will be added to future FMTs, improving signal quality for participating stations in that region, particularly on the lower frequency bands. Automated results collection and reporting will be supported for all future FMT events.

==> FCC ENFORCEMENT ACTIONS

On March 1, Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Fredrick C. Severa, AH8I, of Pago Pago, American Samoa, concerning Severa's out-of-band operation.

In the letter, Hollingsworth said he tried contacting Severa at his Pago Pago address (his address of record) about the matter, but the letter was returned unclaimed, as were other letters sent to him at an address listed for the American Samoa DX Society in California; Severa is listed as trustee for the organization. Hollingsworth said that the Commission tried reaching Severa at another address for the American Samoa DX Society in California -- this one in Juneau, Alaska -- but to no avail.

Finally, on March 27, Hollingsworth sent Severa a letter to a Chico, California address. Severa replied to the letter, stating "that [Severa] had operated out of band because it was 'dark in the vehicle and apparently I experienced a problem with improper VFO selection of the transceiver that I was using which caused me to transmit out of band.'" Severa's letter failed to mention, Hollingsworth said, why Severa "failed to respond to mail sent to your address of record."

Hollingsworth advised Severa "that future instances of out of band operation will result in enforcement action against your license. Additionally, you are requested to update your license records within 10 days indicating the address at which you will receive Commission mail. Failure to respond to Commission mail sent to your address of record is a separate violation of Commission rules."

Hollingsworth also sent a letter to residential owners in Phoenix, Arizona, regarding Part 15 devices in their home causing RFI to a licensed Amateur Radio operator.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

==>SOLAR UPDATE

Tad "I swayed my leaves and flowers in the Sun" Cook, K7RA, this week reports: Sunspot 998 emerged this week, another old Solar Cycle 23 sunspot near the Sun's equator. Daily sunspot numbers for June 10-12 were 14, 11 and 13. Last Sunday, June 8, had the lowest 10.7 cm solar flux value I've ever seen -- 64.9 -- at the observatory in Penticton. The noon reading is the official daily sunspot number; the value observed that morning at 1700 UTC was actually a tiny bit lower at 64.8. The only value this low I have in my records was almost a dozen years ago near the last solar minimum, July 19, 1996. The 10.7 cm solar flux is a measurement of energy at 2.8 GHz gathered by an antenna in British Columbia. The facility is the Dominion Radio Astrophysical Observatory (DRAO) that sits 168 miles northeast of my Seattle location at approximately 49.322 degrees north latitude, 119.621 degrees west longitude. The solar flux value is a general indicator of solar activity, but not as useful as sunspot numbers for predicting propagation. Geophysical Institute Prague expects quiet conditions for June 13, quiet to unsettled June 14, unsettled June 15-18 and quiet to unsettled June 19. Sunspot numbers for June 5-11 were 0, 0, 0, 0, 0, 14 and 11 with a mean of 3.6. The 10.7 cm flux was 66.4, 65.9, 65.6, 64.9, 66, 66.2, and 65.7 with a mean of 65.8. Estimated planetary A indices

were 2, 8, 12, 7, 5, 4 and 4 with a mean of 6. Estimated mid-latitude A indices were 3, 7, 10, 5, 2, 1 and 3, with a mean of 4.4. NASA predicts more of the same quiet conditions, with slight possible unsettled conditions on June 18, with a planetary A index of 12. They expect solar flux to stay below 70 until mid-July. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is the ARRL June VHF QSO Party on June 14-16. Look for the NCCC Sprint Ladder and the Digital Pentathlon on June 13. The Portugal Day Contest and Asia-Pacific Sprint (SSB) are June 14. Look for the ANARTS WW RTTY Contest, the GACW WWSA CW DX Contest, the REF DDFM 6 Meter Contest and the West Virginia QSO Party on June 14-15. The Run for the Bacon QRP Contest is June 16, and the RSGB 80 Meter Club Championship (SSB) is June 19. Next weekend, look for the Digital Pentathlon on June 20. The Feld Hell Sprint and the AGCW VHF/UHF Contest are June 22. The All Asian DX Contest (CW) and the SMIRK Contest are June 21-22. On June 25, be sure to check out the SKCC Sprint and the BCC QSO Party. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* Firedrake Jammer on the Loose Again in Asia: Amateur Radio operators throughout the United States have reported hearing an intruder signal -- dubbed Firedrake -- on 20 meters. ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, said he has received reports from Intruder Watch monitors in Texas, Montana, West Virginia, Massachusetts, Colorado, Washington, Nevada and Pennsylvania hearing the jammer on 14.010 and 14.070 MHz. Hams in IARU Region 1 have heard the jammer on 14.000, 14.005, 14.010, 14.030, 14.050, 14.050 and 14.090; Uli Bihlmayer, DJ9KR, Assistant Monitoring Coordinator for Region 1 (IARUMS) <http://www.iarums-r1.org/> said he has had reports of hearing the jammer on three frequencies at the same time. Skolaut said he heard it on 14.070 at 1500 EDT on June 6 from ARRL HQ, but has not confirmed Firedrake on any other frequencies. "We have reported the jammer to the FCC's High Frequency Direction Finding (HFDF) facility in Columbia, Maryland. They have also heard the jammer and have sent a harmful interference report to the Chinese government," Skolaut said. The FCC has no authority to make intruder stations outside the US stop transmitting on Amateur Radio frequencies; such situations typically are dealt with through diplomatic channels. "All three IARU regions are coordinating efforts to collect observations and forward them to the proper authorities to follow up on this," Skolaut said. "As you probably

remember, this jamming occurred almost two years ago <http://www.arrl.org/news/stories/2006/08/17/2/> and was primarily heard on 14.260 and 18.160 MHz." According to Bihlmayer, the jammer (whom Region 1 monitors have dubbed Firedrake) plays oriental-type music (click here to hear what Firedrake sounds like - <http://www.arrl.org/news/files/firedrake.mp3>) and originates from the Chinese government in an attempt to block out the Sound of Hope short wave broadcasts <http://sohnews.com/shortwave-broadcasts/>. The Sound of Hope refers to itself as "a Chinese language media network providing an alternative to China's state controlled media with news and cultural programming. Radio Free China (RFC) is Sound of Hope's project to reach listeners in Mainland China with programming beyond the control of China's omnipresent blockade of free information." Information on the Intruder Watch program can be found in the June 2007 issue of QST.

* New Extra Class License Manual Now Shipping: The "ARRL Extra Class License Manual" <http://www.arrl.org/catalog/?item=1352#top> and "ARRL's Extra Q&A" <http://www.arrl.org/catalog/?item=1379> are your tickets to every privilege granted to Amateur Radio operators. Expert instruction leads you through all of the knowledge you need to pass the exam, including rules, specific operating skills and more advanced electronics theory. Everything you need to know to pass the 50 question Extra class exam is right at your fingertips -- both books contain the latest Extra class question pool and answer key. Study the "ARRL Extra Class License Manual" to understand the theory and applications needed to upgrade your license. With more than 700 questions included in the question pool -- valid from July 1, 2008 to June 30, 2012 -- reading the "ARRL's Extra Q&A" is the best way to review for the exam with confidence. The Extra class license is the highest of all three US Amateur Radio licenses. To upgrade to Extra class you must already hold a General class license (or have recently passed all of the exams required for a General class license). Upgrading to an Extra license only requires passing a written examination. As an Extra class licensee, you will have full privileges on all frequencies authorized by the FCC for Amateur Radio.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, June 22, 2008 for these online course sessions beginning on Friday, July 4, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the

student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Jim Veatch, WA2EUJ, Wins May QST Cover Plaque Award: The winner of the QST Cover Plaque Award for May is Jim Veatch, WA2EUJ, for his article "The TAK-40 SSB CW Transceiver." Congratulations, Jim! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/qstvote.html>. Cast a ballot for your favorite article in the June issue by Monday, June 30.

* ARRL Announces New DeSoto Cup Winner: The ARRL's DXCC Desk announced June 3 that Fausto Minardi, I4EAT, is the winner of the 2007 DXCC Challenge DeSoto Cup <http://www.arrl.org/awards/dxcc/DeSoto-Trophy-lrg.jpg>. According to ARRL DXCC Manager Bill Moore, NC1L, Minardi achieved this honor with 3129 band points. Bob Eshleman, W4DR, placed second with 3124 band points; Leif Ottosen, OZ1LO, holds the third place spot with 3119. The DeSoto Cup was first presented in 2000 to Eshleman; he has received the award each year since. The 2007 race saw the closest point spread -- five points -- since the DeSoto Cup's inception in 2000. Moore said that in 2006, Eshleman was leading the race, but Minardi briefly pulled ahead; Eshleman recovered the lead in time to take the Cup for 2006. He continued: "In 2007, the same thing happened with Eshleman leading the pack, but Minardi pulled ahead again and kept the lead and took the title away from Eshleman for the first time ever. I wonder who will take the Cup in 2008." It looks to be another race this year, Moore said. "Showing no mercy, Minardi recently increased his lead even more by achieving a new level of 3139! Fifteen band points now separate the number 1 and number 2 spots!" The DeSoto Cup is presented to the DXCC Challenge leader as of December 31 each year <http://www.arrl.org/news/stories/2001/05/08/3/>. The DeSoto Cup is named for Clinton B. DeSoto, whose definitive article in October 1935 QST forms the basis of the DXCC award. Only one cup will be awarded to any single individual. A medal will be presented to a repeat winner in subsequent years. Medals will also be awarded to the second and third place winners each year. The DXCC Challenge Award is given for working and confirming at least 1000 DXCC band-entities made after November 15, 1945 on any of the amateur bands, 160 through 6 meters (except 60 meters).

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA,
k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

No matter how fast you can beep, you gotta admire this gent! I stand in awe!

----> http://www.wrsmithclocks.com/telegraph.htm

There's a difference between "craftsmanship" and "artistry", and W4PAL is an
artist. I hope there's a museum somewhere waiting for this stuff to show up.

Wow! W4PAL has combined function, mechanical precision and beauty.

Dave K8MN

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

630. Antennas - Is NVIS a good thing?

Newsgroup: rec.radio.amateur.moderated

From: Bill Horne <bill@horneQRM.net>
Message-ID: <hvqdna30jt1sj8rVnZ2dnUVZ_uGdnZ2d@speakeasy.net>
Source record: 2701

Thanks for reading this. I've just been through a very confusing antenna trial, and I'd really appreciate some info from hams who know more about them then I.

My brother, W3TDH, called me up yesterday and asked me to help test some 80 and 40 meter antennas that his club is preparing for field day. He told me that the club is going to serve their target coverage area by using two dipoles, spaced 1/2 wave apart and fed in phase, so as to maximize NVIS (Near-Vertical Incidence Skywave)radiation.

I'm not arguing with the design: antennas spaced 1/2 wave apart and fed in phase always have maximum radiation at right angles to a line bisecting both antennas. Ergo, two dipoles, horizontally mounted, etc., will indeed produce their maximum radiation straight up and down.

My question is: why would that be the best design? I thought that NVIS radiation was a byproduct of having a radiator less than 1/2 wave above the ground, and that it wasn't to be sought after, but rather avoided. Leaving aside the losses due to 1/2 the power pointing straight down, why would an antenna on 80 or 40 meters be most effective by radiating almost straight up? Wouldn't the coverage be improved by phasing the antennas so as to maximize radiation toward the horizon?

73,

W1AC

Depends on the coverage you want. You want far away? Aim for the horizon.
You want 100-200 miles? Aim up.

Bill,

NVIS antennas are in fact desirable in some applications, where you wish to communicate only with stations nearby, say out to about 250 miles. I can see them useful in emergency communcations scenarious to get good HF coverage of a local disaster area, or for use on a section traffic net, or other similar "local" communications needs. In a "contest" situation like Field Day they'd be tactically useful to have in your bag if your station was located in a high population density area with a lot of nearby stations like the east coast corridor, so that you'd somewhat avoid having a skip-zone, especially if the low bands (40 and 80) "go long" at night.

NVIS is great for in-state communications.

However, the object of Field Day is to contact as many stations as possible.
Using a NVIS antenna will severely limit the number of stations which can be
contacted.

Bill Horne <bill@horneQRM.net> writes:

The goals with NVIS are twofold:
- Avoiding nulls in local area coverage.
- Eliminating distant noise and QRM. If you're, after local coverage,
you also want that.

Local is a relative term. If the reflective layer is 200 km up, ranges
up to 480 km have a takeoff angle of 40 degrees or higher. A dipole a
quarter wave up above average ground is less than 2 dB down at that
elevation. At very low heights, the dipole is 3 dB down at 45
degrees. (It also radiates just a small fraction of the power you feed
it.)

As to why this would be the best design, it won't be for winning the
contest! Your brother may have another goal, like simply wanting to
test the design.

By the way, only part of the power going down is lost. The rest is
reflected. How much depends on height and ground characteristics.

It's just a W.A.G., but most of the old publications reflected the culture of the time and the culture in those days was oriented to working DX, not locals. Today, I enjoy talking out to several hundred miles much more than speaking to someone a continent or two away who is restricted (many times) as to what they can or cannot say by their government. Then throw in foreign accents, my aging hearing, etc., and one understands why speaking with my fellow Americans is a much more pleasant experience - most of the time. I mean no offense to foreign amateur radio ops. I enjoy speaking with them too, when in a relaxed, non competitive atmosphere.

Well, maybe and then again, maybe not.

During SS weekends I temporarily rig a very low 75M dipole (25 feet up) to snag the "close in" mults like WI, IA, MB, etc. It's not NVIS per se, but the idea is to get a high take-off angle.

Out here in flyover country it's simply a mult-catcher, but in a dense population area (like the east coast or Ohio valley), having an NVIS choice on the antenna switch can be a great advantage.

An NVIS antenna is usually referring to a low dipole. There are a lot of misconceptions about the antenna. They do work on DX (just not as well) and they make a pretty fair Field day antenna.

The reasons are that they radiate fairly equally in all angles, as compared to a similar antenna at a height that would allow it to have a lower radiation pattern. This might sound odd, but if you model an NVIS antenna, then compare it to a higher one you'll see that is the case.

I think that we some times get tricked by terms such as "Take off Angle" or similar terms. That dipole is radiating in all directions. Some just not as much as others. That can get us thinking that the signal comes off the antenna as a "blob" that is heading out at some ideal or non-ideal angle.

People have earned DXCC using NVIS antennas.

To complicate matters, Propagation effects are not static. I performed experiments a few years ago, using a dipole which was NVIS on 80/75 meters, and a Vertical antenna (Butternut HF6V) to answer the perennial question " Which is better, a horizontal or a vertical antenna?" In receive mode, I used a decade attenuator box. To transmit, that has to be removed, lest I get a smokey crunchy attenuator.

Which is better? The answer is a resounding yes! And not always in the way we would think. The propagation effects made the dipole perform better sometimes when I expected the vertical to, and vice versa.

What's more the conditions can change in the middle of a QSO. I had many cases of fading, when the Op would mention how the band was changing.

Switch from vertical to dipole, or vice versa, and it brought the signal back up. Note I'm not saying that this will compensate for the band closing up.

So that NVIS antenna might not be so bad for Field day as we may think. It won't have as much oomph at lower takeoff angles as the low takeoff angle antenna will, but it will have output at those angles none the less.

I thought the purpose of Field Day was to serve as a training ground for emergency preparedness. And a time to experiment with new techniques and technology in an "emergency" setting without it being a "real" emergency.

Considering the relative ease of setting up an NVIS antenna system, and the number of other stations on the air, Field Day makes a perfect time to see how it performs and to map it's effectiveness for short range HF communications.

Maybe I'm going blind in my old age, but I just don't see contesting under 47CFR97.1

It certainly does that. It can be a test of how quickly a group can gets stations up and running. It can be a test of which groups are better organized and it can certainly be (and is) a test of how efficient operators can be in copying a message quickly and accurately. They keep and publish scores, do they not? That's a contest as well as an exercise.

> And a time to experiment
> with new techniques and technology in an "emergency" setting

I'm going to be bold in stating that I believe Field Day is a terrible time to be fiddling with new techniques/technology. It is a simple matter to do that well in advance of Field Day. You certainly wouldn't want to experiment with new techniques/technology in an actual emergency.

> Considering the relative ease of setting up an NVIS antenna

I could have done that last Tuesday. The bands are loaded with stations almost all of the time. The results of installing an NVIS antenna are well known. They work better for working stations within a few hundred miles of your location. Install a low dipole or install a dipole at medium height above ground with a reflector under it and voila!

> Maybe I'm going blind in my old age, but I just don't see
> contesting under 47CFR97.1

You're right. Neither will you see anything about discussing non-functional body parts on 75m, participating in a large roundtable discussion or DXing. There are numerous things not addressed. That does not mean that they are prohibited.

Put your dipole up between and two (or three, if it is an inverted vee)
connect the coax and start screaming. This idea of two phased antennas
isn't going to make any difference. If it does, please come back and let us
know but I will bet you wont see one iota of difference in your FD
performance.

I think you are both correct. While the purpose is emergency preparedness, the format seems rather contest like. Keeping score, different classes, posting the scores in QST. It's just a way to inject some fun in the whole process. Get folks on the air, and nothing like a little competition to get a person to improve their skills.

> Considering the relative ease of setting up an NVIS antenna

Let's look at Field day. We're pretty much not DX'ing to begin with. Excepting Alaska and Hawaii, the distances aren't that vast.

So a Low takeoff angle antenna isn't even the best choice, IMO. My experiments show the low angle antenna to have a very strong local signal, then for a few hundred miles out it is not very good, then it starts improving, and for very long distances it tends to be better than the NVIS type.

That was done on 75 meters, and keep in mind that it was not over a long period of time - around 2 weeks, but I'm fairly confident that I'm at least in the ball park.

I worked Field Day once overnight on 75 meters using 100 watts, and an off center fed dipole at 40 feet. I used that setup to work the west coast, and Hawaii and Alaska. I ran and held frequencies the whole night long.

I would recommend if a group was going to put up a "DX angle" antenna, they would be well served to put up an NVIS antenna to complement it.

> Maybe I'm going blind in my old age, but I just don't see

My sole interest in 80 meters is for EmComm data modes, where NVIS is
the desired mode. I hope that my (inefficient) dipole will do what I
want.....

I'm going to be spending some time near Buffalo NY (SW suburbs,
Orchard Park, East Aurora area.) I'm going to be setting up a
temporary station, and I'm sure I'll forget something since I've never
done that before. Where in the area does one go for radio bits?

Rich, K6RFM

Only it really isn't inefficient - at least not because of it's
radiation pattern.

I'm curious though, what data modes do you use on 80? I do PSK there,
but are you doing handshaking and error correction? This time of year
could be taxing on that.

We can spin this into an other thread if you like.

The antenna that I am using is a B&W HF Wideband Folded Dipole, best described as a resistor with wires and a balun. It was originally developed for quick-and-dirty erection and has become "the standard" for those Federal agencies that can't afford to install monster HF log-periodic beams. It does cover all frequencies between 160m and 10m equally poorly without the need for an antenna tuner. Mine is mounted with the center about 35 feet AGL and the ends about 25 feet AGL.

>I'm curious though, what data modes do you use on 80? I do PSK there,

PSK and Pactor I. I have been fairly successful with PSK but I haven't heard any P-I signals where they're 'sposed to be. Some of us locals are planning to have a P-I QSO to make sure that we can connect to something. There's 'sposed to be a local CMS (HF relay) station not far from here but we haven't heard it on. So much for 24/7 availability.

Amateur Radio Newsline(tm) Report 1610 - June 20, 2008

Amateur Radio Newsline report number 1610 with a release date of Friday, June 20th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hams in the United States mid-West continue their storm relief efforts as hams in India get ready to face their yearly monsoons. Also, a T-Hunting ham prevents an unnecessary search and rescue operation and science comes up with the first self replicating machine. Well, almost. Find out the details on Amateur Radio Newsline(tm) report number 1610 coming your way right now.

RESCUE RADIO: THE RAIN KEEPS FALLING

The rain keep falling and the rivers keep rising in several mid-Western states and ham radio operators continue to volunteer their time to the relief effort. Amateur Radio Newsline's Jack Parker, W8ISH, joins us from Indianapolis, with more:

--

Flood waters that rushed through south central Indiana last week ruined or damaged thousands of homes, affecting the lives of their owners. Amateur Radio Operators from around the state continued to provide critical communications through the following week.

Fourty-two hams, many of them from surrounding counties, assisted in shelter operations in Columbus, Indiana and four other towns.

Bartholomew County was one of the hardest hit by the June floods. According to Noel Taylor N9CJT, the five day operation racked up nearly 15-hundred man hours in Amateur Radio Communications.

Further west, Amateurs in Terre Haute Indiana had problems of their own. Heavy rains dropped nearly a foot of water on Vigo county, pushing the Wabash River over its banks.

Newcomer Jerry Boling, KC6OND, had just become the ARES EC for Vigo County five days before the flood hit. He was working with a new county Emergency Management Director. Both had little experience coping with a major disaster:

..

KC6OND. "When all this took place I was very unprepared. I'm just very thankful I work with a great group of guys there in the Wabash Valley. And I'm gonna tell you something I've lived all over the countr. These guys
in the Wabash Valley really have their stuff together."

..

Vigo county hams maintained an emergency net for four days.

Over in Johnson county Amateur Radio Operators were re-activated the following Friday when torrential rains once again flooded county roads. Local officials feared more homes would be flooded. Several buildings were damaged by high winds as the latest storm left its mark on the flooded landscape.

To date, a total of thirty Indiana counties have been declared disaster areas. Meanwhile, Emergency Management Officials across the Hoosier state are singing praises for the work Amateur Radio Operators have done.

Reporting from Indianapolis, this is Jack Parker W8ISH

--

Meantine the ARRL reports that hams have also been busy in Wisconsin where severe weather starting on June 9th, brought flooding to five counties. One of these county's called on ARES members to provide patrols of the flooded areas overnight on two consecutive nights. According to ARRL Wisconsin Section Emergency Coordinator Bill Niemuth, KB9ENO, approximately 90 ARES members responded to the call for assistance. (ARNewsline(tm))

**

RESCUE RADIO: HAMS IN INDIA PRAISED IN PRINT

A number of newspapers in India are praising the initiative being taken by hams in the city of Mumbai. This, to be ready when the yearly rains start to fall. Robb Topp, VK5MM, of the WIA News reports:

--

Ham radio is regarded as the best back-up communication system during calamities says an item in the Indian press.

Abhijit Pant and other amateur Ham operators are taking part in a novel initiative they are using Ham radio as a rescue tool during the monsoon season in Mumbai this year

When telephone lines fail and mobile networks get jammed, voices crackling over the airwaves could save citizens caught in waterlogged areas.

When everything fails, we rise. This is a challenge and Ham Radio really works during crucial occasions. Ham radio is better than other means of communication, Abhijit said.

When they receive information about stranded people, mobile Ham stations and Ham operators relay information to a centralized control room which helps those in distress get access to emergency services.

I'm Rob, VK5MM.

--

One newspaper article summed it up this way. It says that it may have started as amateur radio, but with the skills involved, it's far from being
just amateur. (WIA News)

**

RESCUE RADIO: T-HUNT HAM PREVENTS UNNEDED AIR FORCE SEARCH

An unnamed Oregon ham radio operator is being credited with preventing the need for an expensive government search for an Emergency Locator Transmitter. One it turned out that was functioned on by mistake.

According tp KTVZ news, the ham was driving along Interstate5 near the city of Roseburg when he picked up an unusual signal. It turned out to be a beacon from an Emergency Locator Transmitter that was presumably in a downed aircraft.

Sergeant Dave Marshall of the Douglas County Sheriff's office says the ham operator happened to be a volunteer for the Amateur Radio Emergency Services. He used his T-hunt knowledge and followed the source of the signal to a hangar at the Roseburg Regional Airport.

The signal turned out to be coming from the wreckage of a home built plane that crashed on a Roseburg street May 26th. The 70-year-old pilot had amazingly walked away from the wreck. He had returned to the hanger where the remnants was being stored to show it some friends when one of them accidentally triggered the beacon.

As soon as the T-hunting ham showed up it was quickly turned off. If it hadn't been, the Air Force would have launched a search for the wreckage of a plane. (KTVZ.com)

**

RESCUE RADIO: FLORIDA HAM HELPS IN RESCUE AT SEA

A Florida ham is being credited with helping to save those on-board a sailboat stranded in a raging storm.

Dorrain Sawyer, KB4UUA, of Bonifay, tells the N-W-F Daily News that she was recently monitoring the bands when a distress call came in. It was about 9:30 a.m in the morning when she learned that a vessel sailing off the coast of Costa Rica had run into stormy weather and its passengers were calling for help.

The vessel in trouble was the Stravaig, a 42-foot sailboat from Great Britain, was caught in 60-mph winds of what would become Tropical Storm

Arthur. The Stravaig was low on fuel and had ripped sails when it began taking on water in its engine room.

Sawyer did not receive a call directly from the Stravaig. Rather the message was relayed to her from a nearby vessel. When she got it, she promptly called the Coast Guard. A lengthy rescue mission ensued and the Stravaig and its passengers finally reached shore at about 10 p.m.

Sawyer said that she spent about four hours on the phone with the Coast Guard, and it took them nearly 12 hours to bring the Stravaig to shore. Although Sawyer was the first to react to the Stravaig's call, she tells the on-line newspaper that she knows there were other radio operators listening and waiting to help. (NWF)

**

RESCUE RADIO: SOUTH AFRICA ASSISTS CHINA IN SETTING UP RESCUE RADIO GROUP

Hams from South Africa are pitching in to help radio amateurs in China to form a rescue radio organization of their own. Following the recent earthquake in China, that nations ham community realized the value of having an organized amateur radio disaster communication organization and have turned to South Africa's Hamnet for help in forming it.

Hamnet is South Africa's equivalent of RACES in the United States. Its National Director, Francois Botha, ZS6BUU, has already has shared training manuals with Michael Chen, BD5RV, in Nanjing. Botha also provided Chen with details of how to structure a disaster management communication organization.

ZS6BUU says that it is gratifying that South Africa's Hamnet can be of assistance to a nation that has suffered so much in the past few months. (SARL, Southgate)

**

HAM RADIO IN SPACE: PLEASE MONITOR THESE NEW BIRDS

The sponsor of a pair of cubesat satellites is inviting hams world-wide to help monitor the tiny birds once they are on-orbit. Students at Santa Clara University are asking radio amateurs to liten out for the beacon signals from PreSat and NanoSail-D which are scheduled to launch on June 23rd from the Reagan Test Site in the Marshall Islands.

Both spacecraft are scheduled to go into Low Earth Orbit as secondary payloads aboard a SpaceX Falcon-1 launch vehicle. PreSat's mission will be to evaluate the performance of a generic biofluidic sample management and handling system for future advanced in situ space-borne biology experiments. It will operate on 437.318 MHz FM, will send an AX.25 packet every 5 seconds.

The NanoSail-D spacecraft will deploy a solar sail that also will be used as a drag sail. This, to demonstrate orbital debris mitigation technology. Its signal will be on 437.269 MHz FM, sending an AX.25 packet every 10 seconds. In both cases hams on the ground are asked to submit received beacon packets through the mission websites in order to receive a web-based QSL card.

The URL's for each bird is: PreSat - http://www.presat.org, NanoSail-D - http://www.nanosaild.org (KE7EGC)

**

HAM HAPPENINGS: ARRL FIELD DAY JUNE 28 AND 29

ARRL Field Day takes place June 28 and 29 and this year record level participation is anticipated.

Field Day is the ARRL's flagship operating event that's held each year on fourth full weekend in June. Field Day brings together newcomers and experienced hams for 24 hours of operating fun while at the same time demonstrating that hams can go anywhere to instantaneously, set up their gear, and provide emergency communications.

One big rules change for Field Day 2008 is that the former Demonstration Mode Bonus category has been eliminated. Its been replaced by an Educational Activity Bonus worth 100 points. This new bonus is intended to encourage clubs and groups to do some more formal educational activity during their Field Day operation. If you have any questions concerning what activities might be appropriate for this bonus, please send an e-mail to ARRL Field Day Manager Dan Henderson, N1ND and he will get back to you with some ideas.

A complete Field Day Packet can be downloaded from the ARRL Web site. You will find it in cyberspace at www.arrl.org/contests/rules/2008/fd.html (ARRL)

**

HAM HAPPENINGS: ANNOUNCING D-STAR FIELD DAY

If you or your club is planning on participating in this years ARRL Field Day this year, then think about also setting up a D-STAR Field Day station and participating in a parallel event just announced called D-STAR Field Day. Bill Pasternak, WA6ITF, is in the studio with more:

--

This year D-Star Field Day runs June 28th and 29th which is the same as the long traditional ARRL sponsored Field Day operating event.

According to Ed Woodrick, WA4YIH, posting on a D-Star remailer, the rules for D-STAR Field Day are similar to those of the ARRL Field Day. This, in that the event is to demonstrate ham radio communications capabilities to others including public officials. Only instead of traditional analog operation you use digital D-Star equipment.

Setting up a D-STAR Field Day Station doesn't take much. Ed says that a handheld and a log book may be all that is required. Or go all out and setup a a complete voice, low speed data, and high speed data station.

One big change. Since D-Star Field Day is not associated with the ARRL sponsored Field Day, and because most D-Star contacts will likely be made using repeaters, those contacts will not count toward your ARRL Field Day score. This is because the ARRL does not permit repeater use during Field Day while the sponsors of D-Star Field Day do.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

D-Star Field Day comes to you courtesy of the Georgia D-Star group. More information and complete rules are on the web at www.dstarinfo.com/news/DSTAR_Field_Day.html (WB9QZB)

**

EMERGING HAM TECHNOLOGY: ANNOUNCING D-STAR SSTV

And still with the world of D-Star, John Brown, GM7HHB, in Kirknewton, Scotland, has reportedly written a program to send Slow Scan TV type images or webcam captures over the digital data stream over D-STAR radios. The application called D-Star TV runs on Microsoft Windows XP or Vista and requires at least one serial port.

D-Star TV is in its initial testing stage so it has a few bugs. Also, there are some features that still to be implemented. That said, D-Star TV reported to be workable and you can download it free of charge at www.dstartv.com

Oh yes. Its strongly suggested that you read the Frequently Asked Questions or FAQ file before using the program. Its also a free download at www.dstartv.com/faq.htm (QRZ.com)

**

MALICIOUS INTERFERENCE: THE FIREDRAKE IS BACK ON 20 METERS

The so-called Firedrake intruder is back on 20 meter. ARRL Field and Regulatory Correspondent Chuck Skolaut, K0BOG, says that he has received reports from Intruder Watch monitors in Texas, Montana, West Virginia, Massachusetts, Colorado, Washington, Nevada and Pennsylvania hearing the mainland-China based jammer on 14.010 and 14.070 MHz. Hams in IARU Region 1 have heard the jammer on 14.000, 14.005, 14.010, 14.030, 14.050, 14.050 and

14.090 MHz.

According to one Region 1 monitor, the jammer originates from Chinese government transmitters in an attempt to block out the Sound of Hope short wave broadcasts. Skolaut said he heard it on 14.070 at 1500 Eastern time on June 6th from ARRL HQ.

The FCC's High Frequency Direction Finding facility in Columbia, Maryland. also has heard the Firedrake jammer. It has sent a harmful interference report to the Chinese government but has no authority to make intruder stations outside the US to stop transmitting on Amateur Radio frequencies. Such situations typically are dealt with through diplomatic channels. The last time the Firedrake jammer was heard in the ham bands was about two years ago. (ARRL)

**

RADIO EDUCATION: MOTOROLA AND MART TEAM UP TO TEACH HAM RADIO

Motorola and the Malaysian Amateur Radio Transmitters' Society are establishing a network of school amateur radio clubs in Malaysia. This, to instill interest in communications technology and innovation among students.

Motorola Technology managing director Yew Tian Tek said that funds would be invested to equip 40 schools with two-way radio equipment consisting of a base station, and three portable. He said the first school amateur radio club would start in July, adding that equipment would be installed in other schools by the end of the year.

Yew said such clubs would expose the students to amateur radio which could encourage them to explore the technology further. The radio club network involving 40 schools nationwide will also serve as response teams in emergencies or disasters. (IZ8FTW)

**

HAM HAPPENINGS: HAMVENTION PLEDGES NO MORE FLEA MARKET WAITING LINES

The outgoing president of the Dayton Amateur Radio Association says that that this years one big problem at the Hamvention will be solved long before next years event. That being the extrodinarilly long waiting times for sellers to get into the Flea Market area.

Writing in the clubs newsletter, Jim Simpson, WB8QZZ, acknowledged that there were more than a few disgruntled Flea Market participants. This, after a computer glitch managed to make for long waiting lines for Flea Market vendor to getting in to set up shop.

Simpson say that several changes will be made to system over the summer months. He says that October 1st is the groups deadline to have all sales and data collection tools on line, checked out and ready for use.

WB8QZZ says that this must get done in a timely manner and a team of information technology proficient individuals has been selected for this

process. (DARA RF Carrier)

**

HAM HAPPENINGS: HAM RADIO 2008 IN GERMANY

The countdown has begun for HAM RADIO 2008. That's Europe's answer to the Dayton Hamvention that has taken place for the past 33 years at Lake Constance near Friedrichshafen, in Germany. .

This years dates are June 27th to the 29th and the main focus of HAM RADIO 2008 is Amateur Radio and the Satellites.

There will also be a special programs for youngsters. Arrangements have been made for tomorrow's hams can participate in the gathering where 17 different stations will permit participants to experience the excitement of Amateur Radio on their own. Also, a special training course for school teachers will focus on Amateur Radio projects in school.

Last year's HAM RADIO had over 18,000 visitors, and 500 exhibitors from over 30 countries. (Southgate)

**

ON THE WEB: PICKMYRIG.COM

U-K hams M3PHP and M-Zero-TZO have launched their newest site called PickMyRig.com. This is a simple cyberspace location where you input a few details you wish to have on a new radio and PickMyRig.com will display matching ham radio gear for you.

PickMyRig.com is from the team who brought you Hamtests.co.uk and HamRadioForum.net. M0TZO says that the new site is still in its earliest incarnation but it is ready for use. Again the U-R-L is www.ickMyRig.com (M0TZO)

**

HAM RADIO MARKETPLACE: FIRST SDR TRANSCEIVER FROM INDIA

The first software defined all mode transceiver covering H-F and 6 meters from India has been brought to the ham radio marketplace. Priced at $599 in U.S. dollars, the transceiver from WonderRadio appears to be a kit based on an article from QEX Magazine titled "A Software Defined Radio for the Masses." More information is on-line at sdrtec.com. (Southgate)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: HOWARD SHEPHERD, W6US - SK

Its with the deepest sympathy that we report the passing of former ARRL Southwestern Division Director Howard Shepherd, W-6-U-S.

Shepherd served as Southwestern Division Director from 1965 through 1967, when he held the callsign W6QJW.. He was a record-setting contester, an Elmer to countless up-and-coming young hams and a volunteer leader. In his professional capacity as an attorney he was an adviser on antenna zoning issues and club incorporations.

Howard Shepherd, W6US, died on Friday, June 13th. Services were scheduled for Saturday, June 21st at the Good Shepherd Presbyterian Church in Los Alamitos, California. (ARRL Southwestern Division News)

**

EMERGING TECHNOLOGY: NEW MODEL VoIP CALLING LAUNCHED

German telephone company Deutsche Telekom AG, the parent of T-Mobile, says that it has invested in Jajah, an upstart firm that lets customers bypass long-distance fees by connecting their calls over the Internet.

Founded in Austria in 2005, Jajah has emerged as the third model of Internet calling, also known as Voice over Internet Protocol, or VoIP. Users go to the company's Web site and enter two phone numbers -- their own and the number they want to call. The company calls both numbers. If the calls are answered, Jajah connects them. Calls are free between Jajah users in many countries. Other calls cost about 3 cents a minute.

Most VoIP businesses, like Skype service and Vonage generally don't involve the user's wired or wireless phone. Instead they rely on a broadband connection to carry the call to the outside world.

So far Jajah has more than 2 million registered users around the world with 40 percent in the United States.. The company is headquartered to Mountain View, California. (Press release)

**

PROPAGATION: SUNSPOTS ARE UNSPOTS

Mr. Sun is going longer than normal without producing sunspots. So say those attending the International Solar Conference held at Montana State University from 1st to the 6th of June.

About 100 scientists from around the world attended the conference to talk about Solar Variability, Earth's Climate and the Space Environment. According to an article on the event by the Montana State Univeristy news service, scientists say periods of inactivity are normal for the sun, but this period has gone on a lot longer than usual.

You can read the full article at www.montana.edu/cpa/news/nwview.php?articleY82 (University News Services)

**

HAM RADIO IN SPACE: UK TO LAUNCH STUDENT CUBESAT

In ham radio space related news, students at Leicester University in the U-K have begun a project to design, build and launch a satellite into space. Twenty undergraduates in the department of physics and astronomy are involved in the mission to detect space dust. The main body of the satellite was donated this week by an engineering company based in Loughborough. G7HIA and G0SFJ are the amateur radio mentors to this satellite project You can read the full BBC News story at: http://news.bbc.co.uk/1/hi/england/leicestershire/7453497.stm) (Southgate)

**

HAM RADIO IN SPACE: AO-16 MALFUNCTION UPDATE

AMSAT-North America Vice-President of Operations Drew Glasbrenner, KO4MA, says that the AO-16 ham satellites on-going malfunctions continue. According to Glasbrenner, AO-16 continues to spontaneously shut off and controllers suspect it is a watchdog timer that is not operating properly. Also that the problem is temperature related.

The resets on the satellite began shortly after the satellite re-entered periods of eclipses after a long period of full sun. Both Glasbrenner and Mark Hammond , N8MH, have, at various times, have re-commanded the bird on. It will remain operational for anywhere from just a few seconds to a few minutes before shutting down. They also have experimented with doing the reset operation automatically, but with not much success.

The current plan is to wait a little bit until the eclipses start getting shorter. At that point in time the overall temperature of the satellite rises some, and controllers will then see if the frequency of the resets goes down enough to make some sort of day-to-day operation of the aging bird feasible once again. (ANS)

**

HAM RADIO IN SPACE: AMSAT SPACE SYMPOSIUM CALLS FOR PAPERS

This is the first call for papers has gone out for the 2008 AMSAT Space Symposium and Annual Meeting. This years dates are October 24th to the 26th in Atlanta, Georgia. Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to the amateur satellite program.

An emphasis for this year is an educational outreach to middle and high school students. Another topic if interest is using amateur satellite tracking systems to monitor deep space network objects.

Camera ready copy on paper or in electronic form will be due by September 1st for inclusion in the printed symposium proceedings. Papers received after this date may not be included in the printed proceedings.

A one-page abstract as soon as possible. Abstracts and papers should be sent to n8fgv@amsat.org (AMSAT, AA4RC)

**

ON THE AIR: THE HOLYLAND IN OCTOBER

Hal Turley, W8HC, and Jerry Fish, K8OQL, have announced plans to return to Israel in October for another CQ World Wide Phone Contest from the Holyland. In commemoration of Israel's 60th Anniversary in 2008, the two have been granted permission to operate as 4Xï¿½C as a special event and contest station from atop Israel's historical Masada National Park.

Hal and Jerry will be hosted and joined by Ruben Alon, 4Z5FI, for their Multi operator Single station operation during the contest. Direct QSLs to W8HC or via the buro. All 4Xï¿½C QSO's will also be uploaded to the ARRL's Logbook to the World and Hal will QSL 100% via GlobalQSL.com.

For those not awate, Masada was built during the years 37 to 31 BC by Herod the Great. It served as a nearly impenetrable stone fortress and palace.

The site is located in the remote Judean desert and is situated on a table-top plateau rising nearly 450 meters. However Masada's actual elevation is near-sea level since the Dead Sea below it is over 400 meters below sea level.

Additional information can be found at www dot w8hc dot com. (W8HC)

**

DX

In D-X, a team of operators will use the special callsign 7Y46ND from Algeria during the month of July. They plan to operate from the city of Djelfa on 80 through 10 meters. QSL via 7X2DD

The Hungarian Traveling Amateur Radio Team will be active from Liechtenstein between June 23rd to the 29th. Operators are HA0HW, HA4DX and HG4GBE all operating portable H-B-Zero on 40 through 6 meters using CW, SSB, and maybe some digital modes. QSL via the HA Bureau or direct via each operator's QRZ.com address.

DL4AO will be active portable Oh Zed from Bornholm Island until June 26th. He will operate in his early morning and late afternoon hours, mostly on 20 meters. He will also operate on 6 meters using CW and SSB. All of the QSOs will be confirmed automatically via the bureau.

The Spanish operation from East Timor continues through the 24th of April signing 4W6R. Activity is on 160 to 6 meters using CW, SSB and RTTY. QSL via EA4URE.

Lastly, DK7LX will be operating portable FH from Mayotte will be operational until June 23rd of. Activity is holiday style on the H- F bands using mainly CW. QSL direct to DK7LX as his callbook address.

THAT FINAL ITEM: MACHINES THAT MAKE MORE MACHINES

And finally this week, as biologists are busy working on cloning living organisms, engineers are similarly at work on a mechanical counterpart. That being to create non-living things that can replicate themselves. And now they have built one. Well, kind of. John Williams, VK5BUI, of the WIA News says that they are at least on their way:

--

New Scientist have reported how more than 100 researchers from around the world have been working on a project called Rep-Rap or Replicating Rapid Prototyper.

Rep-Rap the world's first 3D printer can print pieces which can be assembled by hand to make an exact copy of the original printer. The replica is no mule, either - it can also print another copy of itself.

So far, Rep-Rap can only reproduce its plastic parts, and not its metal or electronics. It takes a human a few hours to assemble the copied pieces into another printer.

Besides replicating itself, it can also print plastic 3D objects including coat hooks, water-filter insects, children's sandals, and much more.

People already "run their own CD burners, printing presses and photographic laboratories", said Adrian Bowyer, the University of Bath mechanical engineer who launched the RepRap project. "There's no reason they shouldn't run their own factories as well."

Now if only Rep-Rap could replicate my voice when I get the croaks!!

I'm John VK5BUI bui bui bui bui

--

Don't look for self replicating machines to replace humans in all aspects of manufacturing very soon. While scientists have succeeded in the area of small simple plastic parts, self replicating completed devices is likely a long, long ways away. (WIA News)

==> HAM RADIO VOLUNTEERS PROVIDE SUPPORT DURING SANTA CRUZ FIRE

Ham radio volunteers from Santa Cruz ARES
<http://www.ares.santa-cruz.ca.us/> provided a vital layer of
communications to support firefighters, law enforcement, Red Cross and
even animal control during the Martin fire in the hills above Santa Cruz
over Father's Day weekend. As of Tuesday, June 17, the fire, which
covered more than 500 acres, was completely contained. Four people were
injured in the fire. Three homes were destroyed and another one was
damaged, while eight outbuildings burned down. Santa Cruz, home to
University of California, Santa Cruz, is a town of about 55,000 people
```

located on the northern edge of Monterey Bay.

During the blaze, ARRL Santa Clara Valley Section Public Information Coordinator Bill Moffitt, AE6GS, said the radios in the Santa Cruz County Emergency Operations Center were "crackling with traffic as hams across the area transferred information, made requests and made sure the various agencies -- from the California Department of Forestry and Fire Protection (CAL FIRE) to the Santa Cruz County Sheriff's department -- were kept abreast of the progress in fighting the fire and the needs that arose in the area." Yet, Moffitt said, even with all this going on, "ARES volunteers remained completely professional, ensuring the accuracy and effectiveness of the flow of traffic."

"Our group got some valuable practice during the Summit fire a few weeks ago," said ARRL Santa Cruz County District Emergency Coordinator Cap Pennell, KE6AFE, who manned the radio room in the Santa Cruz EOC. "Our people were much more ready for this fire, and the quality of the response shows." The Summit fire burned more than 4200 acres in both Santa Cruz and Santa Clara Counties, destroying 31 homes and 63 outbuildings. Both the Martin and Summit fires remain under investigation.

Helping to evacuate people in the fire's path was an immediate priority, and the ARES teams facilitated communications between the various agencies who were notifying people about their evacuation status. But pets and livestock, including a multi-hundred pound pig, also needed to be moved from harm's way. That's when Santa Cruz County Animal Control organized volunteers from Equine Evacuation, a local animal evacuation organization, to help transport animals out of the fire zone. Several hams are also members of the group, and with their help, Equine Evacuation safely and efficiently removed more than 50 animals, including horses and other livestock, to safe locations.

"I slept about four hours last night," said Hap Bullard, KQ6YV, as he stood next to his ham radio-equipped pickup hooked up to his empty horse trailer at the staging area for the animal evacuation. Bullard is a ham radio operator who also serves with Equine Evacuation. "I'm here to ensure the animal control people can stay in touch with the Emergency Operations Center, but I'll be going to pick up horses if I'm needed," he said. -- ARRL Santa Clara Valley Section Public Information Coordinator Bill Moffitt, AE6GS

==> HAMS READY TO RESPOND TO IOWA FLOODS

News of the flooding in Iowa has been leading the nightly newscasts for days. But according to ARRL Iowa Section Emergency Coordinator Jim Snapp, NA0R, "While flooding here in Iowa is a disastrous event to individuals and business affected, only a very small percentage of Iowa's land mass is directly affected by actual river flooding. Thanks to advance warnings from government agencies, loss of life has been very low." Only one fatality has been reported in the Iowa floods.

Snapp said that Iowa amateurs were active in SKYWARN events over several weeks prior to the start of flooding events. On the morning of June 12, the Iowa State Emergency Operations Center (SEOC) requested activation of the Amateur Radio station in the SEOC (KC0EEC) to provide alternate communications with Linn County EOC (Cedar Rapids area) and Jones County EOC. KC0EEC was manned around the clock, but Snapp said he knows of only one piece of traffic that was passed.

"We have access to the SEOC e-mail program, since that is where we would enter messages coming in by Amateur Radio," Snapp said. "Many, many requests came in and were handled by SEOC staff. Jones County closed their EOC Saturday and the Linn County EOC dismissed the Amateur Radio operations late on Saturday, June 14 and the KC0EEC station was closed."

Snapp said that on June 16, Iowa SEOC requested information on Amateur Radio communication abilities in southeastern Iowa "in case of communication breakdown in that area. Currently, there is no widespread Amateur Radio activity in Iowa dealing with the floods."

About 20 years ago, Snapp said that Iowa installed a fiber optic backbone to all 99 Iowa counties: "This system has been updated and refined over the years, and is very robust redundant system. All the Iowa County Homeland Security and Emergency Management coordinators have e-mail access directly to the Iowa SEOC for requests or to get questions answered."

The Iowa Homeland Security and Emergency Management Agency at the SEOC has supplied the amateur community with ham equipment: an HF transceiver, an HF/VHF transceiver and tri-band VHF/UHF and dual band VHF/UHF transceiver. "If the Iowa SEOC needs Amateur Radio communications, they will contact us," Snapp said.

==> CALIFORNIA HANDS-FREE LAW TO GO INTO EFFECT JULY 1; HAM RADIO NOT AFFECTED SAYS COUNSEL

A new California hands-free cellular telephone law goes into effect July 1, 2008. It, like many others around the country, prohibits using mobile telephones while driving, unless a hands-free device is utilized. ARRL has received numerous questions about its application to the use of mobile Amateur Radio stations by licensed amateurs. The law, in relevant part, states as follows:

"23123. (a) A person shall not drive a motor vehicle while using a wireless telephone unless that telephone is specifically designed and configured to allow hands-free listening and talking, and is used in that manner while driving."

ARRL General Counsel Chris Imlay, W3KD, advises that "The definition of prohibited behavior in California's recent statute does not include a prohibition of operating a mobile, licensed Amateur Radio station while driving, because Amateur Radio transceivers are not telephones. While ARRL cannot guarantee that this statute will not be interpreted by law enforcement officers or the courts of California more broadly than that, it is our view that a fair reading of the statute excludes mobile

operation of Amateur Radio equipment by licensed radio amateurs.

"That said, it is obvious that drivers should pay full time and attention to driving. To the extent that operating their amateur stations while mobile is a distraction to them, they should consider, if possible, pulling over safely to the side of the road and conducting their amateur communications while stationary."

ARRL Regulatory Information Manager Dan Henderson, N1ND, adds that while the statute on its face does not apply to Amateur Radio mobile operation, problems could still arise: "Law enforcement officers are not telecommunications experts and may not understand or be concerned about the difference between a cellular telephone and a ham radio. If you do get stopped, be polite and state that you were operating a mobile Amateur Radio transmitter as specifically authorized by the FCC and not a wireless telephone. Don't engage in an argument if the officer issues a citation -- that won't help your cause. If cited, you will need to follow the instructions about contesting the citation in traffic court. As ARRL General Counsel Imlay notes, the language of the statute does not appear to include amateur mobile operation. Unfortunately, you could have to go through the inconvenience of appearing in court to contest a citation."

ARRL will continue to monitor the application of this statute relative to radio amateurs.

==> GERMAN HAM CLAIMS FIRST DXCC ON 432 MHZ

The world of Amateur Radio DXing has passed a new milestone: On Friday, June 6, Jan Bruinier, DL9KR, of Niedernhausen, Germany, worked his 100th country on 432 MHz (70 cm) via moonbounce (EME) and CW.

Samek Zdenek, OK1DFC, and Hofbauer Zdenek, OK3RM, were getting ready to go on an EME DXpedition to Macedonia. Before they left, Samek asked Bruinier to help test out the equipment; Bruinier gave him a beacon, aiming a signal off the moon. According to VHF guru and conductor of QST's "World Above 50 MHz" column Gene Zimmerman, W3ZZ, this is done by transmitting a series of CW dashes and then stopping to listen for the signal to return a little more than a second later. The moon averages 384,000 km from the Earth; radio waves travel at ~300,000 km/sec.

After one of these transmissions, Bruinier was excited to hear Samek appear on frequency with a 549 signal. Thus, after an exchange of calls and reports, Bruinier's 100th country on 432 MHz was in the log. Once his QSL cards are confirmed in the near future, he will become DXCC #1 on 70 cm.

Bruinier's 70 cm EME operations began in 1977. He had followed the exploits of the early EME pioneers in QST, operators like KH6UK, W4HHK, W3GKP and W1FZJ who was conductor of the "World Above 50 Mc" during much of the 1960s. Jan and his family moved to a semirural location in Germany in 1976 where he could put up decent VHF antennas. Working initially on his own, he built an array of 16 ten-element quagis

(antennas with single quad loop driven elements and reflectors and 8 Yagi directors) following the design described in QST by Wayne Overbeck, K6YNB (now N6NB). After a few false starts with other tubes, he obtained an Eimac 8938 and built a near-legal limit amplifier. The station exciter was a set of Drake twins as an IF strip using homebrew transverters with an increasingly sensitive group of GaAsFET preamplifiers, always working at the state-of-the-art.

As time progressed, Bruinier built a bigger amplifier capable of running 1500 W continuously to deal with the high duty cycle found in EME operation -- long, slow CW with two minute transmissions at a time -- and receiver systems that yielded noise temperatures of 60 kelvins that could detect 7 dB of noise when he pointed his array into the ground. He eventually transitioned from the quagis to an array of DL6WU design Yagis fed with 1-5/8 inch Heliax, currently having a gain of 28.4 dBd. For comparison, this is slightly more gain than the 28 foot Kennedy parabolic dish has at 432 MHz.

According to Zimmerman, the range of contacts covered by the 70 cm band is less than 1000 km; even under the most enhanced conditions, it is less than double that. "To work the 100 entities needed for DXCC, EME communications are essential. EME is the most demanding form of operation there is in Amateur Radio," he said. "Every single aspect of the station must be optimized: The equipment, the antennas, the feed lines and most particularly, the talent of the operator. Even 1 dB may make the difference between a contact and no contact. Bruinier's achievement was accomplished the old fashioned way -- by dint of hard work, excellent equipment, big antennas and many, many hours on the air looking for new countries and not missing many, if any, DXpeditions to the many countries where there is no 432 MHz EME activity."

Bruinier told Zimmerman that many people going to many countries on all continents made this award possible: The Five Bells Group, the Yota Sawe Group, Michale Kohla, DL1YMK, and Monica; Bernd Mischlewski, DF2ZC; Mark De Munck, ON5FF (now EA8FF); Bernhard Dobler, DJ5MN; Mart Sakalov, SM0ERR; Dimitris Vittorakis, SV1BTR; Gudmund Wannberg, SM2BYA; Frank Hobelmann, DL8YHR; Joachim Werner, DL9MS, and Allen Katz, K2UYH, among others, as well as groups from Russia, Spain, France and Denmark.

If you would like to read more details about Bruinier's career as an EMEer, please look for his story in his own words in the "World Above 50 MHz" column in the September 2008 issue of QST.

==> WORLD AMATEUR RADIO DIRECTION FINDING (ARDF) CHAMPIONSHIPS FAST APPROACHING

Have you ever thought about competing on the world stage? ARRL Amateur Radio Direction Finding (ARDF) Coordinator Joe Moell, K0OV, reports that there are some openings available to compete for the USA this September at the ARDF World Championships in Korea. "All of this year's USA gold medalists plus those from last year and other competitors who did well have been offered positions on ARDF Team USA for the 14th ARDF World

Championships," he said. "Many are unable to go this year for a variety of reasons, so at this time there is at least one opening remaining in every category except M50 (males age 50-59). This makes it possible for relatively inexperienced radio-orienteers to join the team. It is also possible to attend as a non-competing visitor, but all visitors must be listed on the national team roster."

Moell notes that those interested in traveling to the 2008 ARDF World Championships as a member of Team USA (or a USA visitor), to please contact him immediately via e-mail <homingin@aol.com>. Do not contact the Korean organizers directly. If you have not been on Team USA before, please include your full name, call sign, mailing address, home phone number and date of birth in your e-mail. If you wish to participate as a citizen of another North or South American country (non-USA), please e-mail IARU Region 2 ARDF Coordinator Dale Hunt, WB6BYU <wb6byu@arrl.net>. Canadians should also contact RAC ARDF Coordinator Joe Young, VE7BFK <ve7bfk@rac.ca>.

To be safe at the World Championships, Moell said participants must be capable of solo navigating with a map and compass in the forest for several miles. IARU rules limit Team USA membership to US citizens and legal residents. Each member is responsible for his or her own travel arrangements and entry fees. For more information, go to the Championship Foxhunting News page of Moell's Web site <http://www.homingin.com/farsnews.html#korea> where prospective participants can get team status reports and download the latest bulletins from the organizers.

Moell also reports that he is looking for hosts and organizers for 2009 ARDF events. "USA ARDF Championships have taken place in New Mexico, Georgia, Ohio, California, North Carolina and Texas so far. Almost every state has an area of forest that is suitable for the sport. Excellent orienteering maps may already be available, because there are US Orienteering Federation clubs in 40 states. Besides maps, these clubs can assist with scoring systems, flags, site acquisition, insurance and so forth," he said.

"Don't worry too much about the transmitters," said Moell. "There are plenty available for loan from active groups. Instead, concentrate on the site and the hospitality aspects, such as where people will stay, what they will eat and how they will get from place to place. If your club or ham group has put on a big hamfest or ARRL convention, you probably have the skills and resources to organize the USA ARDF Championships. The optimum months will be July and August." If you or your club is interested, please contact Moell via e-mail <homingin@aol.com>.

==> W1AW ANNOUNCES 2008 FIELD DAY BULLETIN SCHEDULE

Stations active during ARRL Field Day -- June 28-29 -- are eligible to receive 100 bonus points for copying the special Field Day bulletin transmitted by W1AW (or K6KPH on the West Coast) according to the

schedule below. You must include an accurate copy of the message in your Field Day submission. The Field Day bulletin must be copied via Amateur Radio; it will not be included in Internet bulletins sent out from Headquarters and will not be posted to Internet BBS sites.

W1AW will operate on the regularly published frequencies. The special PSK31 bulletin will be transmitted on the regular W1AW teleprinter frequencies. CW frequencies: 1.8175, 3.5815, 7.0475, 14.0475, 18.0975, 21.0675, 28.0675 and 147.555 MHz. Teleprinter frequencies (includes PSK31): 3597.5, 7.095, 14.095, 18.1025, 21.095, 28.095 and 147.555 MHz. Phone frequencies: 1.855, 3.990, 7.290, 14.290, 18.160, 21.390, 28.590 and 147.555 MHz.

Friday
CW: 5 PM PDT, 6 PM MDT, 7 PM CDT, 8 PM EDT
Teleprinter: 6 PM PDT, 7 PM MDT, 8 PM CDT, 9 PM EDT
Phone: 6:45 PM PDT, 7:45 PM MDT, 8:45 PM CDT, 9:45 PM EDT
CW: 8 PM PDT, 9 PM MDT, 10 PM CDT, 11 PM EDT

Saturday
CW: 7 AM PDT, 8 AM MDT, 9 AM CDT, 10 AM EDT
Phone: 8 AM PDT, 9 AM MDT, 10 AM CDT, 11 AM EDT
CW: 5 PM PDT, 6 PM MDT, 7 PM CDT, 8 PM EDT
Teleprinter: 6 PM PDT, 7 PM MDT, 8 PM CDT, 9 PM EDT
Phone: 6:45 PM PDT, 7:45 PM MDT, 8:45 PM CDT, 9:45 PM EDT

Sunday
CW: 7 AM PDT, 8 AM MDT, 9 AM CDT, 10 AM EDT
Phone: 8 AM PDT, 9 AM MDT, 10 AM CDT, 11 AM EDT
PSK31: 9 AM PDT, 10 AM MDT, 11 AM CDT, 12 PM EDT

The Maritime Radio Historical Society's K6KPH <http://www.radiomarine.org/> will transmit the 2008 W1AW Field Day message for the benefit of West Coast stations on 3.5815, 7.0475, 14.0475 and 21.0675 MHz, CW only. The frequencies for K6KPH Teleprinter (RTTY and FEC AMTOR) will be 7.095 and 14.095 MHz. The K6KPH schedule is accurate as of June 17, 2008.

Saturday
CW: 7:30 AM PDT, 8:30 AM MDT, 9:30 AM CDT, 10:30 AM EDT
CW: 5:30 PM PDT, 6:30 PM MDT, 7:30 PM CDT, 8:30 PM EDT
Teleprinter: 6:30 PM PDT, 7:30 PM MDT, 8:30 PM CDT, 9:30 PM EDT

Sunday
CW: 7:30 AM PDT, 8:30 AM MDT, 9:30 AM CDT, 10:30 AM EDT
Teleprinter: 9:30 AM PDT, 10:30 AM MDT, 11:30 AM CDT, 12:30 PM EDT

More information on ARRL Field Day is available on the ARRL Field Day Web site <http://www.arrl.org/fieldday>.

==>SOLAR UPDATE

Tad "Blazon sky blue and endow the Sun with gold" Cook, K7RA, this week reports: We are lucky to see sunspot activity this week, although it is only one. Sunspot 999 is currently in its most geo-effective position -- near the center of the Sun -- as we see it. This is another old Solar Cycle 23 spot. The sunspot number for the last few days has been 11, which is the minimum non-zero sunspot number. A value of 10 is assigned because there is just one cluster of sunspots, although in this case it is a cluster of just one; a value of one is added to that for the single spot. A week ago, the sunspot number was 13, which means one cluster, three spots, although the judgment of the number of spots inside sunspot 999 is somewhat subjective. Sunspot numbers for June 12-18 were 13, 13, 0, 0, 11, 11 and 11 with a mean of 8.4. The 10.7 cm flux was 67.1, 66.5, 67.1, 66.5, 65.3, 65.9 and 65.4 with a mean of 66.3. Estimated planetary A indices were 3, 3, 16, 20, 13, 9 and 9 with a mean of 10.4. Estimated mid-latitude A indices were 2, 1, 16, 14, 10, 8 and 8, with a mean of 8.4. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the Digital Pentathlon on June 20. The Feld Hell Sprint and the AGCW VHF/UHF Contest are June 22. The All Asian DX Contest (CW) and the SMIRK Contest are June 21-22. On June 25, be sure to check out the SKCC Sprint and the BCC QSO Party. Next weekend is ARRL Field Day on June 28-29. The Digital Pentathlon is June 27. The Ukrainian DX DIGI Contest, His Majesty King of Spain Contest (SSB), the Marconi Memorial HF Contest and the ARCI Milliwatt Field Day are all June 28-29. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, July 6, 2008 for these online course sessions beginning on Friday, July 18, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions,

reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 4. There will be no W1AW bulletin or code practice transmissions that day. The ARRL Letter and ARRL Audio News will be posted a day early on Thursday, July 3. ARRL Headquarters will reopen Monday, July 7 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* First Image from CUTE-1.7 +APD II Satellite: The ground control station at the Tokyo Institute of Technology has downloaded the first color image taken by the CUTE-1.7 +APD II Amateur Radio satellite <http://lss.mes.titech.ac.jp/ssp/cute1.7/howtoreceive_e.html>. The satellite was 620 km above the Earth at 28.905 degrees North and 146.040 degrees East when the image was captured. CUTE-1.7 +APD II was one of several CubeSats carried to orbit this year in April by an Indian PSLV-C9 rocket launched from the Satish Dhawan Space Center <http://www.arrl.org/news/stories/2008/04/28/10067/?nc=1>. The satellite transmits packet radio data at 9600 baud at 437.475 MHz. -- Our thanks to Mineo Wakita, JE9PEL, for this story.

* Howard Shepherd, W6US (ex-W6QJW), SK: Former ARRL Southwestern Division Director Howard Shepherd, W6US, passed away on Friday, June 13, 2008. He was 87. Shepherd, who served as Southwestern Division Director from 1965-1967, when he held the call sign W6QJW, was active and accomplished in many facets of Amateur Radio. According to current Southwestern Division Director Dick Norton, N6AA, Shepherd was a record-setting contester, an Elmer to countless up-and-coming young hams, a volunteer leader and, and in his professional capacity as an attorney, an adviser on antenna zoning issues and club incorporations. Positions he held included Army Amateur Radio System DNC2, Los Angeles Section Emergency Coordinator, Deputy Chief of LA County Disaster Authority, California State Office of Emergency Management Net Control Station, Chairman of Los Angeles Area Council of Radio Clubs, Volunteer Instructor and Examiner, Explorer Scoutmaster, Radio Physics Instructor at Yale University Technical School and Senior Instructor at USAAF Technical Training Command. Shepherd was an Honorary Member of the Southern California DX Club with 352 countries confirmed, member of the San Diego DX Club, past chairman of the 50 Club and prime mover in the Leisure World Radio Club of Seal Beach. An ARRL member for over 70 years, "Howard gave back to Amateur Radio, his community and his country in many ways. We will miss him greatly," Norton said. Services will be held on Saturday, June 21 at 11 AM at the Good Shepherd Presbyterian Church in Los Alamitos, California.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL

cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Ummm, in Oregon, downed aircraft searches are the responsibility of the
county sheriff.

Even had it not been turned off quickly, the Air Force would not launch
anything. They'd have to ignore the known signal until it was, but launch,
no. There is no reason to launch anything once an ELT has been found
and someone is on site.

If it hadn't been found, the state OEM duty officer would have been
called, who would have called the emergency services duty officer in
the county the sarsat hit plots to, who likely would have called his
ARES people. If his ARES people are on the ball, that is.

At worst, the county official would have punted to CAP, but not the Air
Force. (Yes, an auxilliary is not the same as the parent organization.)
Since CAP is volunteer, the cost would be the same as for ARES.

This gets one named? Gee, I did much the same thing in Auburn California sometime back in the 1980's. The difference was that I was driving a cessna (on the ground) at the time. I was able to identify the aircraft and spot it was parked at the airport, and call in the information to flight service who passed the information on to get it shut off.

The useful trick was that the cessna radios would still pick up the ELT signal if one was close enough when you tuned them off-channel. I was at least a MHz away in frequency when I peaked the signal up right in front of the source airplane. With an AM signal, it was a pretty good attenuator, built right in my receiver.

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Changes followed by "|".

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

Congratulations, You spotted the strategy involved on the first pass.
We are in Maryland about twenty miles north of the District of Columbia.
This is a very contact rich environment. The antenna in question is
one of many we plan to deploy.

Amateur Radio Newsline(tm) Report 1611 - June 27, 2008

Amateur Radio Newsline report number 1611 with a release date of Friday, June 27th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T.

China's TV networks praise ham radio for assisting after the May earthquake, 4 Meters is expanded in Denmark, a state grant buys new rescue radio gear for ARES in Oregon and the United States at the 2008 World A-R-D-F championship games. Joe Moell, K0OV, has a special report on the Field Day weekend 2008 Amateur Radio Newsline(tm) report number 1611 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: CHINA PRAISES ITS HAM COMMUNITY FOR QUAKE RESPONSE

Chinese television has heaped praise on that nations ham radio community. This for its volunteerism following that nations recent earthquake. Bill Pasternak, WA6ITF, has the details:

--

Reports on the Chinese national T-V network news said that when all other communication means failed, amateur radio operators came out to provide valuable first hand information from the center of the earthquake disaster. This included an High Frequency link for the Red Cross from the disaster area back to the nation's capital city of Beijing, enabling that aid agency to do its essential humanitarian work.

Other reports said that BY8AA continuously coordinated VHF and UHF communications for a 100 km radius from the capital of southwest China's province of Sichuan. Additional repeaters were set up in two other cities that were among the worst hit areas outside the epicenter. This formed an effective amateur radio relay communication network to provide an Amateur Radio respone.

For the Amateur Radio Newsline, Im Bill Pasternak, WA6ITF, at the studio in Los Angeles

--

In another report, two ham radio operators are reported to have driven to the center of the earthquake disaster area and had a repeater set up by the

morning of May 13th. That was just hours after the disaster hit. That repeater enabled the transmission of rescue instructions, status reports and was a main communication channel for public use when telephone services were down. (WIA News, BA1RB)

**

WORLLDBEAT: CHINA OLYMPIC SPECIAL EVENT STATIONS ON THE AIR

Amateur Radio Special Event stations for the 2008 Beijing Olympic Games are now on the air. The Southgate news says that the stations began operating May 18th with five special event calls representing the five rings of the Olympic flag.

The calls are BT1OB, BT1OJ, BT1OH, BT1OY and BT1ON with the last letter of the callsign corresponds to the color of each of the rings of the Olympic flag . BA4EG will be the QSL manager for all stations. QSL's can be sent either direct or via the bureau and will begin to be answered in October.

There is a website set up that includes an on-line log search, a QSL card receive and sent status, and other information. Its in cyberspace at at www.bj2008ses.com.cn. (Southgate)

**

RESTRUCTURING: 4 METERS EXPANDED IN DENMARK

Access to the European 70 MHz band in Denmark has been expanded. Writing on the 70 MHz remailer, OZ2M says that the new Danish 4 meter band allocation has been extended with three new segments of which two are a direct extensions to existing ones. These are 69.9875 to 70.0000 MHz, a new distinct segment from 70.2375 to 70,2875 MHz and another expanded segment from 70.4875 to 70.5125MHz.

The 4 meter or 70 MHz band I a Region 1 only allocation. Its not available elsewhere so QSO's when that band I open internationally are usually made crossband. Hams outside Region 1 operate 6 or 10 meters while those in counties with the region that have 70 MHz privileges transmit in the 4 meter band. (Southgate)

**

HAM HAPPENINGS: FIELD DAY ON SHORTWAVE

In Bill Pasternak, WA6ITF, with word that Ted Randall, WB8PUM, of Lebanon, Tennessee, will be "Live from Field Day" on Field Day Saturday, June 28th. But his operation will be over shortwave radio station WBCQ on 7.415 MHz.

According to the ARRL. Randall will broadcast from 2 PM to 5 PM Eastern, then from 11 PM to 2 AM Eastern on Saturday, June 28th and he is inviting Field Day sites nationwide to dial into the program. The number to call during broadcast times is 931-528-0133. WB8PUM says that the line will not be answered prior to Field Day.

Randall says that this is a chance for Field Day locations to call in and be part of a special live remote broadcast from your own Field Day site. He says that the show will have a potential international audience of more than 200 million people

Again the phone number is 931-528-0133. He adds that as far as he knows, nothing like this has ever been done before. He hopes to hear from your Field Day location during the show.

More information is on-line at http://www.arrl.org/news/stories/2008/06/26/10185/?nc=1 (ARRL)

RESCUE RADIO: $250,000 GRANT TO OREGON ARES BUYS NEW RADIOS

Jackson County Oregon ARES, is using state grant money award to it earlier this year to purchase digital communication equipment for ARES chapters in each Oregon county. This, according to the on-line edition of the Southern Oregon Mail Tribune that previously reported the state awarded the Jackson County group $250,000.

According to the news article the award was due to the work of ARES operators last December when they provided backup communications to coastal communities during the winter storms really saved the day last December.

Those storms were some of the worst in decades. They knocked out both landline and cellular phone service to a number off coastal communities for several days. The tiny community of Vernonia was entirely cut off from the rest of Oregon by flooding and landslides. It fell to radio amateurs to direct rescue crews to residents stranded in Vernonia and other hard hit areas. This, while informing hospitals that patients were on the way.

Don Montgomery, WB7Q, is the Emergency Coordinator for Jackson County. He told the Mail Tribune that the group has established some 20 ARES stations throughout the county. He also noted that a company called Mercy Flights recently donated a retired ambulance to the group. WB7Q says its in the process of being converted into an emergency communication vehicle with a full complement of radio equipment on board. The complete story is on-line at www.mailtribune.com/apps/pbcs.dll/article?AID=/20080623/NEWS/806230320 (Oregon Mail Tribune.com)

**

RESCUE RADIO: THE ARRL EMERGENCY COMMUNICATIONS CD

If you are involved in any way in the emergency communications aspect of amateur radio you will want to get a copy of the Emergency Communications Library CD now being published by the American Radio Relay League. The CD is billed as a quick access source for information and software that every emergency communicator should have on hand. Among the items included are documents and presentations on many aspects of emergency communications operations, the ARRL Field Resource Manual and Public Service Communications manuals, software for APORS and Winlink and a copy of the Bob Doherty, K1VV, Simulated Emergency Test movie. For ordering information and pricing please visit www.arrl.org/shop on the World Wide Web. (ARRL)

**

ENFORCEMENT: YOU CANT SELL PHONE JAMMERS IN THE USA

The FCC has issued an Official Citation to Phonejammer.com. This for allegedly marketing unauthorized radio frequency devices in the United States in violation of the Communications Act, and for failing to respond to Enforcement Bureau directives to provide certain information and documents. Bon Wilbanks, AE5DW, has the details:

--

In an earlier Letter of Inquiry or L-O-I to Phonejammer dot com dated November 6, 2007, the Spectrum Enforcement Division of the FCC's that company was marketing radio frequency jammers in the United States. Specifically units capable of disrupting communications on cellular and Personal Communications Service frequencies.

At the time of that letter and again on, May 20, 2008, the FCC said that it observed on its website, www.phonejammer.com, advertisements for the sale of multiple radio frequency jammers. The FCC says that the advertisements for the phone jammers listed shipping costs to the United States and displayed product prices in United States dollars. In addition, the website provided testimonials from United States residents who had purchased the phone jamming devices.

In its response the company claimed that it is based in the United Kingdom and that it doe not distribute, market, or advertise the phone jammers in the United States. In a response the FCC instructed Phonejammer.com to answer each question in the Letter of Inquiry. Though Phonejammers reply e-mails indicate that the comopany received the FCC's Letter of Inquiry, it has failed to respond to the questions set forth in it.

Now in its May 22nd Citation the FCC say that it appears as if Phonejammer has violated Commission orders by failing to respond to Enforcement Bureau directives to provide certain information and documents. It says that no party may ignore the directives in a Bureau inquiry letter. It has directly ordered Phonejammer to provide the information sought by its November 6, 2007 Letter of Inquiry.

For the Amateur Radio Newsline, I'm Don Wilkbanks, AE5DW, in the Southern Bureau not far from New Orleans.

--

Phonejammer dot com was given 20 days to respond or face the prospect of being fined up to $11,000. It was also warned that future violations of the Commission's rules may subject your company to further monetary forfeitures. (FCC)

**

HAM HAPPENINGS: ARRL TEMPORARILY SUSPENDS PHONE DELIVERY OF AUDIO NEWS

The ARRL says that it is temporarily suspending telephone distribution of its Audio News service and will rely only on Internet distribution from its website. In its announcement the League did not explain the reason for suspending telephone distribution but did note this is only temporary and that it is sorry for any inconvenience this may cause.

The ARRL statement added that the League hopes to be able to return telephone access to the ARRL Audio News at 860-594-0384 fairly soon. Meantime you will continue to find it on-line every week at www.arrl.org/arrlletter/audio. (ARRL)

**

HAM HAPPENINGS: NEW RAIL MUSEUM TO FEATURE AMATEUR RADIO

The Feather River Rail Society has begun a new project at the Western Pacific Railroad Museum in Portola, California. Dubbed the "Western Pacific Telegraph and Experimenters Society," the project aims to research and interpret early means of telecommunication on the Western Pacific Railroad.

An integral part of the project will include amateur radio operation from the museum. Matt Parker, N7TOD, is the trustee of the organization's newly acquired amateur radio-club station license. He says that through public interaction via ham radio, an aura can be created of an old-time telegraph office that will include the transmission of public service messages through the National Traffic System,

For more information about the Feather River Rail Society, the Western Pacific Railroad Museum at Portola or the Western Pacific Historical Society, take your web browser to www.wplives.org. (plives.org release)

**

HAM HAPPENINGS: CELEBRATING PRESIDENT REAGAN ON FIELD DAY

Turning to news about Field Day, word that special Events Station, N6R, was scheduled to once again operate from the grounds of the Ronald Reagan Presidential Library and Museum in Simi Valley, California during this years outing. The Ventura County Amateur Radio Society was to be joined by Simi Settlers Amateur Radio Club and the Ventura County Amateur Radio Club for the 24 hour event. Operations planned for most bands between 80 Meters and 24GHz. The call sign N6R commemorates the lives of former United States President Ronald Reagan and his wife Mrs. Nancy Reagan. (N6ZE)

**

HAM HAPPENINGS: FIELD DAY INCENTIVE VIDEO ON YOUTUBE

A celebration of Field Day is the theme of a new two minute video posted to YouTube dot com. With pictures and text cut to music Kevin Pauley, kb9wvi, tells the story of Field Day as it was and as it is today. This is an excellent piece of video to use as an incentive to get your club to rally around the concept of what Field Day is and get them to attend. You will find it at www.youtube.com/watch?v=varHL752Odk (ARNewsline(tm))

**

WORLDBEAT - GERMANY: THE GIANT HAM RADIO CONVENTION

As hams in the US operated ARRL Field Day, Europe's giant Ham Radio Show opened in Freidrichshafen, Germany. Held this year from June 27th to the 29th, more than 18,000 visitors were expected to take advantage of the fair to find out about the latest offerings in the world of amateur radio and electronics.

This year, the focus of the show is on cultivating the interest of a younger generation of operators. Youngsters were to be able to spend two days using Morse, using radios, making things electronic and generally gathering their first experience of the new, 21st century world of amateur radio. (ARNewsline(tm))

HAM RADIO IN SPACE: CELEBRATING 45 YEARS OF WOMEN IN SPACE

In ham radio space related news, word that special event station R45VT is on the air. This, to commemorate the 45th Anniversary of Valentina Vladimirovna Tereshkova becoming the first woman in space.

Tereshkova flew to orbit on June 16th 1963 as pilot onboard Vostok 6. Her call sign during the flight was Chaika. She spent 71 hours in space orbiting the Earth 48 times.

Since that time women have made a significant contribution to space exploration and many of them have been licenced Radio Amateurs. A few of the many notable women space explorers since Valentina Tereshkova include American Sally Ride and the United Kingdom's Helen Sharman to mention only a few.

Sharman was also the first UK woman to be issued a ham radio call for her flight. She operated from the Mir Space Station as GB1MIR

And very apropos for this type of commemorative operation. At least one UK ham resports that he recently worked R45VT through the VO-52 amateur radio satellite. (Southgate)

**

WORLDBEAT - UK: AN AROUND THE UK CRUISE FOR CHARITY
Turning to news from around the globe, a British radio amateur is sailing around the United Kingdom in a bid to raise money for charity. Practical Wireless and the Southgate News say that Ray Oliver, G3NDS, plans to raise money for a worthy cause while operating maritime mobile from his yacht Christine-Marie.
Oliver set sail from Lymington at the end of April. He is operating with an Icom IC 706 that end feeds a 40 ft wire, sloping from the stern of the vessel to the top of the mast. He's mainly been operating on 80m SSB with some activity on top band, but will also operate on other bands and on CW from time to time.
G3NDS says that he will be sending a special QSL card to stations contacted that gives a summary of his challenge. He is also looking for hams to join him on legs of the passage, if anyone would like to crew or operate maritime mobile.
Contact information along with details of how his cruise came about, the charities he's supporting and his progress to date can be found on his web. The URL is quite simple. Its www.roundtheukcruise.org.uk. (PW, Southgate)

**

WORLDBEAT - JAPAN: JARL TO CELEBRATE IARU HF CHAMPIONSHIP CONTEST

The Japan Amateur Radio League will establish 10 headquarters stations in various regions of Japan during the 2008 IARU H-F Championship. The dates are July 12th to the 13th but station may be heard on other bands outside of the contest during the week of July 7th. All QSO's will be QSL'ed automatically via the bureau. (JARL)

**

ON THE AIR: CELEBRATING THE USCG

On the air, all U.S. Coast Guard Auxiliary members that are Amateur Radio operators are invited to operate as Special Event Radio Stations on Saturday October 18th on the High Frequency ham bands. This to commemorate the Anniversary of the U.S. Coast Guard Auxiliary.

Official Coast Guard Auxiliary special event amateur radio stations will be operating with a special 1 X 1 calls to contacting amateur radio operators and other U.S. Coast Guard Auxiliary stations. Special event QSL cards will be used to commemorate the event.

Those interested in becoming an Official Special Event Radio Station should send an e-mail to nnn0abp@navymars.org. The last day to register as an

official station is September 15th. More information is on-line at
http://uscgauxduluth.blogspot.com/2008/06/calling-all-uscg-auxiliary-amateur
.html
(IZ8FTW)

**

DX

In DX, a 6 meter DXpedition to Sable Island is scheduled to remain on the air through Monday, July 7th. The fixed station in grid FN93 will use the callsign CY0X and will be transmitting on 50.117 MHz. Operation will be on CW and SSB. They will also try to activate rare grid GN03 if there is a solid opening using a portable station with a 5 element yagi with the callsign CY0RA. The team also plans on being on 20 and 40 meters using CW and SSB and the HF operation will always take lower priority over the 6 meter operation. QSL via VE3IKV

Lastly, G3RWF will be active from Uganda as 5X1NH through August 15th. His operation will be from Fort Portalin Western Uganda. QSL via G3RWF. He was last active from that location during February and March this year and made over 11000 QSO's during his stay.

(From various DX news sources)

**

THAT FINAL ITEM: THE USA IN THE 2008 WORLD ARDF CHAMPIONSHIP

Finally, you may recall that two weeks ago we put out a reminder to all nations to send their Letters of Intent to participate in the upcoming Amateur Radio Direction Finding World Championships. If you're pondering what hams here in the United States are doing about this event, then wonder no more. Amateur Radio Newsline's Joe Moell K0OV, is here with the answers. Joe:

--

Members of Team USA are now in training for the 14th World Championships of Amateur Radio Direction Finding, or ARDF, which take place near Seoul Korea in the first week of September. This will be the sixth time that USA has fielded a team for the World Championships, which take place in even-numbered years and draw over 300 radio-orienteers from about 30 countries. At the last World Championships in Bulgaria, Nadia Scharlau of Cary, North Carolina was the first North American to win a World Championships medal, and she's hoping to repeat this year.

ARDF is an all-on-foot transmitter hunting sport that usually takes place in large forests, with orienteering maps and compasses, but not GPS, to help the competitors find their way to the locations where their direction finding gear tells them the transmitters should be. A successful competitor may travel 7 or 8 kilometers to track down all of the required radio foxes. He or she must do it on two consecutive days, one on two-meter AM and the other on 80-meter CW.

Team USA 2008 has been selected from the medal winners at our last two national championships. The 2007 event was at South Lake Tahoe, California last September and this year's was at Bastrop, Texas in May. Two weekend training camps for team members will take place during July and August on Mt. Pinos in southern California.

Unfortunately, not everyone who was selected will be able to travel to Korea, so a few openings remain on our team roster. If you or someone you know is skilled at radio-orienteering and would like the opportunity to compete against and learn from the best in the world, please contact me right away.

Also, I'm looking for individuals or clubs to host upcoming USA national ARDF championships. If you your club has put on a major hamfest or ARRL convention, you probably have the skills and resources to put on an ARDF championships.

You'll need a well-mapped forested site for the competitions and your local orienteering club will probably be able to help you with that.

For more information about championship ARDF, Team USA, and the training camps, as well as contact information for the team, point your Web browser to www.homingin.com -- that's homingin, as one word, homingin.com.

From sunny southern California, where we can practice ARDF all year long, this is Joe Moell, K0OV, for Amateur Radio Newsline.

--

The 2008 World ARDF Championship takes place September 2nd through the 7th in South Korea. The United States has been represented at the Amateur Radio Direction Finding World Championships since way back in 1988 (K0OV, ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. ==> STRONG SUPPORT FOR AMATEUR RADIO WEEK AS ARRL FIELD DAY APPROACHES

ARRL Field Day -- June 28-29 -- <http://www.arrl.org/fieldday> is many
things to many people. It ranges from a contest to a picnic to an
emergency drill and more. But according to ARRL Media and Public
Relations Manager Allen Pitts, W1AGP, it is also a public relations
event and groups can score more than 500 points for working the public
relations angle before the weekend even begins.

Instead of just telling your fellow hams and club members about Field
Day, why not tell your local newspapers and radio and television
stations? Having a media hit or link is good for 100 points.

Instead of manning only the radios, how about manning a public
information table with brochures, signs and a smile? That's another 100
```

points. The ARRL offers publicity materials <http://www.arrl.org/brochures/> at no charge except a small shipping fee. It is too late to receive these brochures and handouts if you have not already requested them, but go ahead and order them -- you or your club will never know when the opportunity to tell the world about Amateur Radio will pop up next.

When you invite your elected local officials to visit your Field Day site, you can earn 100 points when they come. "This is easier than many folks might expect, especially with election season looming. All you have to do is ask!" Pitts said.

Having an official proclamation helps, too, he said; many communities and states have named June 23-29 as Amateur Radio Week. "ARRL Public Information Officers around the country were encouraged to begin work on obtaining these many weeks ago, and hundreds of local proclamations by city and county leaders -- as well as six state proclamations -- have been made, with more expected. Proclamations from the governors of Texas, Ohio, Kansas, North Carolina, Michigan, West Virginia, Washington and Alabama, along with a letter from the California Governor Arnold Schwarzenegger are not just recognitions of the past, but keys for future political actions such as PRB-1 <http://www.arrl.org/FandES/field/regulations/local/prb-1_program.html> and legislative issues."

Pitts said that if your state is one of the 24 states without a PRB-1 statute on the books, "Why not start the process now by inviting your elected officials to your Field Day site to see what Amateur Radio is all about. Chances are, they will see the importance of what we do, giving you an inroad into discussing how they can help you get antennas in your community or even across the state. It's amazing to think that a simple invitation could lead to so much, but it's happened before -- why not make your Field Day the next success story."

For a list of the many ways you or your club can earn bonus points this Field Day, please be sure to check out the ARRL Field Day packet <http://www.arrl.org/contests/forms/fd-2008-packet.pdf>. To find a Field Day site near you, check out the ARRL Field Day Locator <http://www.arrl.org/contests/announcements/fd/locator.php>.

==> IARU ADMINISTRATIVE COUNCIL MEETS IN GERMANY

The Administrative Council (AC) of the International Amateur Radio Union (IARU) held its Annual Meeting on June 24-25, 2008 in Konstanz, Germany. Topping the agenda was the consultative process leading to nominations for IARU President and Vice President for the five-year term beginning on May 9, 2009. Current IARU President Larry Price, W4RA, announced in 2007 that he was not available to serve an additional term. The AC agreed that Vice President Tim Ellam, VE6SH, and Region 1 President Ole Garpestad, LA2RR, are suitably qualified to serve as IARU President and Vice President, respectively. Their nominations will be offered to the Member-Societies for ratification. The ARRL serves as the International

Secretariat of the IARU.

The AC conducted a comprehensive review and updated the working document that defines the additional spectrum requirements of the Amateur and Amateur Satellite Services. Requests from the amateur satellite community for support of additional allocations were considered and referred to the IARU Satellite Adviser for additional information.

IARU International Coordinator for Emergency Communications Hans Zimmermann, HB9AQS/F5VKP, presented his report in person to the AC. He noted the outstanding performance of radio amateurs in China who responded to the recent tragic earthquake emergency <http://www.arrl.org/news/stories/2008/05/27/10125/>. The Council also received reports of the other IARU international coordinators and advisers, including International Beacon Project Coordinator Peter Jennings, AB6WM/VE3SUN; Satellite Adviser Hans van de Groenendaal, ZS6AKV; EMC Adviser Christian Verholt, OZ8CY, and Interim Monitoring System International Coordinator Chuck Skolaut, K0BOG. The AC also heard a progress report from an ad hoc committee that is investigating the future role and structure of the IARU. Work since the previous AC meeting last year in Boston has refined the structure and identified the remaining issues to be resolved.

Region 1 representatives offered a resolution seeking to improve the operating standards of radio amateurs; this was adopted by the Council. The AC endorses and recommends the principles set out in the booklet "Ethics and Operating Procedures for the Radio Amateur" by John Devoldere, ON4UN, and Marc Demeuleneere, ON4WW, and encourages each IARU Region to consider this booklet, with a view to adopting it, including any Regional variations that might be felt appropriate.

The Council also commissioned a study of the international QSL bureau system. The study will seek input from Member Societies on the problems they face in light of escalating postage and other expenses, as well as the anticipated impact of electronic confirmation systems such as the ARRL's Logbook of the World <http://www.arrl.org/lotw>.

The AC reviewed and renewed the three-year strategic plan for the development of support for Amateur Radio frequency allocations for the period 2008-2011. The principal focus is on preparations for the 2011 World Radiocommunication Conference (WRC-11) <http://www.itu.int/ITU-R/index.asp?category=conferences&rlink=wrc-11&lang=en>, especially the attainment of an amateur allocation in the vicinity of 500 kHz.
The Council identified the upcoming International Telecommunication Union (ITU) meetings where IARU representation will be required and plans for such representation were reviewed. The plans of Region 3 for the IARU presence at Telecom Asia 2008 (Bangkok, September 2-5) and of the International Secretariat for Telecom World 2009 (Geneva, October 5-9) were also reviewed.

The AC reviewed the 2009-2011 budget, as presented by the International Secretariat (ARRL). It includes provision for financial contributions from the three regional organizations to defray a portion of the expenses, in accordance with previously adopted policy.

The upcoming implementation of the worldwide exclusive allocation of 7100-7200 kHz that was adopted at the 2003 WRC and set to begin on March 29, 2009, was noted, and the many contributors to this achievement were recognized.

The Council selected "Amateur Radio: Your Resource in Disaster and Emergency Communication" as the theme for the next World Amateur Radio Day, April 18, 2009. The theme for 2008 was "Amateur Radio: Allowing Youth to Connect the World."

Each of the three IARU Regions presented status reports that the AC received and discussed. The next regional conference will be that of Region 1, to be held in Cavtat, Croatia in mid-November.

Attending the Konstanz meeting were IARU President Larry Price, W4RA; Vice President Tim Ellam, VE6SH/G4HUA; Secretary David Sumner, K1ZZ; regional representatives Ole Garpestad, LA2RR; Don Beattie, G3BJ; Hans Blondeel Timmerman, PB2T; Reinaldo Leandro, YV5AMH; Ramon Santoyo, XE1KK; Rod Stafford, W6ROD; Michael Owen, VK3KI, and Gopal Madhavan, VU2GMN; ARRL President Joel Harrison, W5ZN, on behalf of the International Secretariat, and recording secretary Paul Rinaldo, W4RI. IARU International Coordinator for Emergency Communications Hans Zimmermann, HB9AQS/F5VKP, attended a portion of the meeting.

The next scheduled meeting of the IARU Administrative Council will be held in Christchurch, New Zealand in October 2009.

==> 2007 ARRL ANNUAL REPORT NOW AVAILABLE

The ARRL Annual Report for 2007, now available online <http://www.arrl.org/announce/annualreport/> and in print, reviews the League's major events of the year and documents the renewed growth of both the ARRL and the activities of the Amateur Radio Service. Just 50 years ago, there were fewer than 90,000 ARRL members; in 2007, ARRL achieved its highest level of membership growth since 1993. By the end of 2007, there were 153,535 ARRL members -- a single year increase of 3.3 percent. In this period of growth, ARRL has upheld its commitment and mission as the leading representative of active radio amateurs.

"As it played out, 2007 was a great year for ARRL and Amateur Radio," said ARRL President Joel Harrison, W5ZN. "We experienced growth in the Amateur Service, growth in ARRL membership, the League is in good fiscal shape and hams are excited about getting on the air. Our headquarters staff is more excited and pumped about our mission than I've ever seen and that enthusiasm is being reflected in our membership numbers."

ARRL Chief Executive Officer David Sumner, K1ZZ, concurred: "The mentoring of newcomers by a friendly, welcoming, and supportive community of experienced amateurs is an essential part of 'service after

the sale.' It's what turns license-holders into active, lifelong radio amateurs. It's what will ensure our success as a radio service and as a national and community resource for public service communications. The ARRL and its 2100 affiliated clubs are working to meet the challenge."

According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, "The Annual Report is not only useful for showing members the strength of the organization, but it is also a valuable tool in presentations to major public officials. At times they may know little about Amateur Radio, but when they see the quality of the annual report, even before they open it up, they know this is an organization to be taken very seriously. We are indeed a national association and very active."

==> GLOBAL EMCOMM CONFERENCE IN GERMANY THIS WEEK

The fourth annual Global Amateur Radio Emergency Communications (GAREC) Conference <http://www.iaru.org/emergency/GAREC2008Program.pdf> is this week, June 26-27, in Friedrichshafen, Germany. It is scheduled just prior to HamRadio 2008 <http://www.hamradio-friedrichshafen.de/html/en/>. That event, called "the Dayton of Europe," is scheduled for June 27-29.

IARU International Coordinator for Emergency Communications Hans Zimmermann, F5VKP/HB9AQS, will present the opening remarks at GAREC 08; Ole Garpestad, LA2RR, President of IARU Region 1, is scheduled to join Zimmermann on the stage, along with representatives from the International Telecommunication Union (ITU) and the Deutscher Amateur Radio Club (DARC), the hosts of HamRadio 2008.

GAREC will take a look at the state of EmComm preparedness in each of the IARU regions, as well as discuss experiences of the 2006 and 2007 EmComm Parties-on-the-Air and the future of the Global Simulated Emergency Test (SET). Delegates will also discuss implementation of the WRC-03 modifications to Article 25 of the Radio Regulations <http://www.iaru.org/rel030703att2.html>, in respect to third-party traffic during emergencies and exercises. The part of Article 25 concerning Emergency Communications says "Amateur stations may be used for transmitting international communications on behalf of third parties only in case of emergencies or disaster relief. An administration may determine the applicability of this provision to amateur stations under its jurisdiction" (RR 25.3), and "Administrations are encouraged to take the necessary steps to allow amateur stations to prepare for and meet communication needs in support of disaster relief" (RR 25.9A).

GAREC delegates will also have the opportunity to look at and discuss the proposed Memorandum of Understanding (MOU) between the International Amateur Radio Union (IARU) and the International Federation of Red Cross Red Crescent Societies (IFRC), as well as the MOU between the IARU and the ITU. IARU Vice President Tim Ellam, VE6SH, with assistance from Hugh Peterken of the IFRC and Zimmermann, as well as a representative from the ITU, will lead the discussion.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, will present a session on how Emergency Communications are handled in the US. Each of the three IARU regional leaders -- Region 1 President Ole Garpestad, LA2RR; Region 2 President Reinaldo Leandro, YV5AMH, and Region 3 Chairman Michael Owen, VK3KI -- will speak on the status of EmComm in their respective regions. Seppo Sisatto, OH1VR, and Juha Hulkko, OH8NC, will present on the possibility of Emergency Communication Centers around the world. There will be a talk on D-STAR in Emergency Communications, and case studies of Emergency Communication practices around the world will also be presented.

==> A SUMMER OF E-SKIP

Tired of the lousy conditions on the HF bands? Come join the crowd on the "Magic Band." Each summer regardless of where the sunspot cycle is, sporadic E -- or E-skip -- blooms on 6 meters and sometimes even on the bands above that. What often appears to be a dead band jumps to life with signals -- some relatively close, only hundreds of miles away -- but some representing worldwide DX on 6 meters.

This year is no different. After a slow start, the 6 meter band came into its own in May and has been open in some direction from almost every location in the US almost every day. Sporadic E peaks around the summer solstice, on or around June 21, with a minor peak around the winter solstice, on or around December 21.

Each summer season has unique characteristics that are not predictable, but make the band so fascinating to follow. This year, the emphasis has been on paths to the west and northwest, extending much further east and south than normal. According to VHF expert and conductor of QST's "World Above 50 MHz" column Gene Zimmerman, W3ZZ, there have been several strong openings from Hawaii to the mainland that have included many areas other than the West Coast. Stations in the Mid-Atlantic, the Southeast and the Midwest have had good shots at KH6 in both May and June.

Zimmerman said that summer has brought a nice surprise: "The highlight of this season has been repeated openings to Japan that have mostly bypassed the West Coast and settled in the Southwest, the Southeast (especially Florida) and the Midwest; Japanese stations have even been heard, but not worked, on the East Coast. The latter is a very rare occurrence indeed."

Calling conditions to the Caribbean "outstanding," Zimmerman said that stations in that part of the world have been working the US and Canada, as well as many stations in Europe. "Ted Jimenez, HI3TEJ, in the Dominican Republic has even worked Japan, a tough path even on 10 meters. Inside the US, stations up to 1500 miles away have been easy to get, and there have been lots of openings where the West Coast and the Pacific Northwest worked the East Coast and the Southeast."

Six meter operators should be alert for very short E-skip that indicates a rare increase in the maximum usable frequency (MUF) to a point where 2

meter E-skip -- or very, very rarely 222 MHz E-skip -- is possible. Zimmerman said there have been several 2 meter sporadic E openings and one 222 MHz E-skip opening this summer: "On May 29-30, 2 meter contacts were reported from Maine to Ohio, south to the Mid-Atlantic, to the Northeast, to South Carolina, Florida, Alabama, Louisiana in the south and Michigan, Western Tennessee and Southern Illinois to the West. The longest was 1477 miles from Maine (David Olean, K1WHS) to Louisiana (William Kemp, K5EMP)."

After small 2 meter E-skip openings on June 3-4 from the Northeast to the Midwest, Zimmerman said the bands blew wide open during the ARRL VHF QSO Party on June 15 with a report of two 222 MHz contacts: John Butrovich, W5UWB (EL17), of Orange Grove, Texas, to Vince Pavkovich, N0VZJ (EN35), of Big Lake, Minnesota; and Paul Trotter, AA4ZZ (EM96), of Charlotte, North Carolina, to David Rush, W5DDR (EM84), McAlister, New Mexico. "This extremely rare event has happened less than half a dozen times in the last 60 years," Zimmerman said. "Two meter E skip was everywhere: Texas; all over the Midwest and Mid-Atlantic; New Mexico to West Virginia, North Carolina, Kentucky and Tennessee; Colorado to Florida, West Virginia, Tennessee, Alabama, Georgia, Texas, Mississippi, Arkansas; Idaho, Oregon and Washington to the Midwest; Wyoming to Illinois, and Nevada to Iowa, North Dakota and Minnesota."

Zimmerman said that conditions are likely to continue to be very good until the middle of July when the E-skip traditionally begins to wind down. "Most areas of the country have not had good conditions to Europe, so that may still be something to look forward to," he said. "Two DXpeditions to rare Caribbean countries are coming up later in June -- to San Andres (HK0) and to St Barts (FJ). If you have an HF/VHF radio that covers 6 meters, put up a dipole or try your 80 meter antenna -- it should work on 6 meters as well -- and have some fun. You never know what you may work next."

==> GO LONG ON SHORTWAVE FOR ARRL FIELD DAY

Have you ever dreamed about being able to broadcast with hundreds of thousands of watts and talk about Amateur Radio to a worldwide audience? Ted Randall, WB8PUM, of Lebanon, Tennessee, will be "Live from Field Day" on 7.415 MHz on WBCQ -- a shortwave radio station -- from 2 PM EDT to 5 PM EDT, then from 11 PM EDT to 2 AM EDT on Saturday, June 28 <http://www.wbcq.com/>.

"This is a chance for all ARRL Field Day locations to call in and do a special live 'remote' broadcast from your Field Day site," Randall said. "This international broadcast has a potential audience of more than 200 million people." Randall, who will be "in the field" but connected to a radio studio, said he will be prepared to take calls from any ARRL Field Day location, "so line up your best chatterbox that likes to rag chew and call in."

The number to call during the broadcast times to get on-the-air -- or any time during Field Day for information -- is 931-528-0133 (the phone

will not be answered prior to Field Day). "As far as we know," Randall said, "nothing like this has ever been done before, so be sure and call in and do your 'broadcast' from your ARRL Field Day site -- listeners will love to hear from you."

Shortwave broadcasting -- the common term for HF broadcasting -- is an FCC-licensed radio service operating between 5.950-26.100 MHz. Shortwave is an international broadcast service intended to be received by the general public in other countries and remains the only medium capable of direct communication from one country to listeners in another country without governmental intervention. With more than 1.5 billion shortwave receivers in use worldwide, the BBC estimates that at any given moment, more than 183 million people listen to shortwave broadcasts each week. Especially in developing countries, shortwave remains the dominant mass communications medium.

"Just remember -- major networks and news services all monitor shortwave," Randall said, "so you never know who will be listening to you tell the world about Field Day and Amateur Radio."

More information concerning this event is available on the ARRL Web site <http://www.arrl.org/news/stories/2008/06/26/10185/?nc=1>.

==>SOLAR UPDATE

Tad "My Sun sets to rise again" Cook, K7RA, this week reports: Recent days graced by sunspots were short lived. June 10-June 13 saw a single sunspot group, followed by two days with no spots then a week of spots from June 16-22. During that week, the sunspot number was 11 every day, the lowest non-zero sunspot number. The four days since have had no spots at all. This weekend is ARRL Field Day, and while there are no sunspots, E skip is a possibility and conditions should be quiet, meaning no geomagnetic disturbance is expected. Predicted planetary A index for June 27-July 3 is predicted at 10, 8, 5, 5, 5, 5 and 5. Geophysical Institute Prague expects unsettled conditions June 27-28, quiet to unsettled June 29 and quiet June 30 to July 3. Sunspot numbers for June 19 through 25 were 11, 11, 11, 11, 0, 0 and 0 with a mean of 6.3. The 10.7 cm flux was 64.9, 65.2, 64.8, 65.4, 65.3, 65.8 and 65.9 with a mean of 65.3. Estimated planetary A indices were 6, 11, 5, 4, 3, 4 and 12 with a mean of 6.4. Estimated mid-latitude A indices were 5, 8, 4, 2, 2, 3 and 10 with a mean of 4.9.. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is ARRL Field Day on June 28-29. The Digital Pentathlon is June 27. The Ukrainian DX DIGI Contest, His Majesty King of Spain Contest (SSB), the Marconi Memorial HF Contest

and the ARCI Milliwatt Field Day are all June 28-29. Look for RAC's Canada Day Contest next week on July 1. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, July 6, 2008 for these online course sessions beginning on Friday, July 18, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the Continuing Education course listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 4. There will be no W1AW bulletin or code practice transmissions that day. The ARRL Letter and ARRL Audio News will be posted a day early on Thursday, July 3. ARRL Headquarters will reopen Monday, July 7 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* ARRL Audio News via Phone Back On Line: The ARRL Audio News is now accessible via phone at 860-594-0384, as well as on the ARRL Web site <http://www.arrl.org/arrlletter/audio/>. We are sorry for any inconvenience this may have caused.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News

<http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

661. Field Day Plans....

Newsgroup: rec.radio.amateur.moderated
Date: 2008-06-28 03:33:28 UTC
From: "Pat Cook, KB0OXD" <kb0oxd@gmail.com>
Message-ID: <8cd94bee-c512-461d-b159-43584b80de4f@z72g2000hsb.googlegroups.com>
Source record: 2732

Hi everyone:

Yep! If you see LIVE video on my newly-created Field Day page @ http://www.qsl.net/kb0oxd/fieldday/ that means I'm working the bands. The broadcast is powered by BlogTV (Their URL is http://www.blogtv.com/ for those who don't know and are looking for a good home for their cam BTW). You can also see the video COMPLETE WITH LIVE CHAT simply by going to http://www.blogtv.com/People/kb0oxd and following any onscreen instructions there.

In addition, I will be monitoring SEVERAL Internet-based DX Clusters on the computer for any activity which is headed for my QTH (Denver, CO USA - DM79). This will be done to avoid wasting bandwith unneccessarily and making futile CQ calls.

I will primarily be on 6M USB, though I will be more than happy to work locals on 144 & 432 as well. I'll also be logging contacts and will post them here for your convience and so you may use that to cross-reference my information with what you have.

IF THE DX IS ROLLING IN - I'm looking at being on cam from 10:00 AM till 2:00 PM in 90 minute increments. I'll then return on cam once I get the first four parts downloaded and moved off BlogTV so that I can archive anything in the evening on Saturday. I may be on cam on Sunday, then again, I may not. It all depends on how things go down.

The reason I will be breaking the archives down into 90 minute archives is because BlogTV only allows up to 500 minutes (That's not quite 4.5 hours, but close enough) of disk space before you have to delete a show/segment, which of course I'm NOT about to do. :)

IF THE DX IS NOT ROLLING IN - I will start broadcasting at 11:00 AM since some Field Day stations will begin operating at that time and will go from there as above (Just one hour later).

I'll also be on EchoLink, but I will be in BUSY mode with Conferencing disabled with a "CQ FD 6M USB" or similar message in the dialog box. This way, if the DX is rolling in on 6M USB, all EchoLink stations will need to do is find me on the band. :)

So....That's what I'll be doing this weekend. :)

This video feed will also be used for other Ham-Related events as well (Info. on those events will be posted as warranted).

Cheers & 73 :D

The 50s and 60s channels have already been auctioned. (The
36 MHz of 60s auctioned recently brought about $650M/MHz)
However, the analog turn-off will vacate most of TV Ch 2-6,
and most of 7-13. This is the truly valuable channel space,
and will be fought over tenaciously. (174-216 MHz) There
is also a proposal to allow devices to selectively "seek"
out vacant channels in any given locality to use for low
power applications, without interfering with television.
This works OK with digital TV channels which may be
adjacent, but the problem is that analog LPTV and translator
stations are being allowed to stay on the air indefinitely,
which means that adjacent channels with strange digital
signals filling the bandwidth could spill over causing
interference to an analog TV signal.

The odds of the FCC "giving" any of this spectrum to hams,
or other so-called "citizens" uses are slim since the FCC is
mandated by Congress to auction off all non-public-safety
spectrum recovered from other services.

How did folks do on Field Day this year?

Any good stories?

I participated at K3TU, in class 2A (+VHF/UHF). We made 949 QSOs (509 CW, 440 'phone). Condx were good (20 meter QSOs at 2 AM!) the weather was tolerable and no major breakdowns. Saw lots of old friends and made some new ones.

Just 363 days to the next one!

There will be 40 full-power digital TV stations remaining in channels 2-6
,
not to mention low-power and Class A stations. There has been some talk
of expanding FM radio broadcasting into this band but I don't think it's
very likely.

This band isn't very appealing to other services, because of the large
antennas necessary for effective operation and the prevalence of noise an
d
interference.

Channels 7-13 are solidly TV territory and will not be going to other
services. There will be 452 full-power digital TV stations on these
channels post-transition, and again some number of low-power and Class A
stations. Most TV stations that had the option of running their permanen
t
digital operation in channels 7-13 chose to do so, even if it meant
obsoleting a perfectly good UHF transmitter/antenna. Coverage is better
for a given amount of power than on UHF, and transmitters are more
efficient. (i.e., lower utility bills)

"...works OK with digital TV channels which may be adjacent..." is under
dispute, with some engineers arguing otherwise. Especially given the
potentially high U/D (undesirable-to-desirable) signal strength ratios.
In an FCC test earlier this year, they also found the devices did a
really poor job of detecting which channels were vacant!
(understandable as these devices are likely to have far poorer antennas
than are commonly used on TV sets, especially in the more rural areas
where the TV signals are weaker and larger antennas are more likely to be
in use)

Analog low-power stations do not have a current deadline for digital
conversion. However, the FCC has announced that there *will be* a
deadline. I doubt it will be more than two years into the future. (and
even if it they do get a lot more time, I think many are going to find
themselves forced to convert as fewer viewers are willing to deal with
analog signals)

Very true.

665. Waveform portability?

Newsgroup: rec.radio.amateur.moderated

In the context of the news release quoted below, what does the term "waveform portability" mean?

"FT. WAYNE, Ind. - PrismTech Solutions Americas, Inc., a wholly-owned subsidiary of PrismTech Corporation, has been selected to provide waveform portability support to the U.S. Navy's software-defined radio (SDR) systems. The work will be conducted through a support services contract overseen by the U.S. Navy's Space and Naval Warfare Systems Command (SPAWAR). Scientific Research Corporation (SRC) serves as the prime contractor."

I participated at WB1NHL, which is our club call, in either class 1B or 1D: we had about a fifteen minute debate about which was the right choice. The club president said that since we were hooked up to a power outlet at the edge of an airport parking ramp, we were class "D", and I decided that since we weren't at home, it must be class "B".

Since the prez was flying demos for the crowd there at the airshow, I got to run the only rig by myself - thus the "1" part - and I also got to try and figure out the very few and extremely complicated controls of an ICOM rig the size of a paperback book, powered by box the size of the congressional manual of ethics, and connected to a 20 meter dipole which I was assured was a perfect match for the rig and didn't need the tuner.

I went to look at the dipole, and quickly realized it was a new type of NVIS radiator: Not Very Intense Skywave. It was strung between the tongue of a trailer hitch and a tent pole, averaging about four feet off the ground: we did, to my surprise, make some contacts on 20 meter SSB, but I attribute that to the reflections from the various aircraft buzzing by at 200 knots.

I gave up on finding ways to delineate the various prefixes on the dup sheet: I started out with nothing for "W", an underline for "K", a circle for "WA", and a box for "WB". Over the course of the two days, I went to single and double under- and over-lines for "KA", "KB", "KD", and "AA", with a dash on each side for "N". For 1x1 special event calls, I just wrote the whole thing.

I would much rather have done it on a laptop, and I have a nice one, but it wasn't there, and the one that WAS there had a display so dim that it couldn't have put a gleam in the eye of a black cat even if the feline was looking to get lucky at midnight in the garden of good intentions and evil static.

There were some high points: the last time I was out on field day, I assembled a gallery of mosquitoes who took turns mapping my face into a perfect copy of my acne-riddled high school Junior class picture. This

time, I came prepared, with a gallon of new age sensitive guy soft skin insect distractor, guaranteed to gently persuade carnivorous bloodsuckers that I wasn't their type without offending their sensibilities at the same time it acknowledged their need for sustenance, with the result that...

Nadda. Nothing. Not a one. None to be seen, none heard, no bites. I never even took the cap off the bottle. So, with my complexion intact and two logsheets filled, I come to the subject of - the tent.

If I had wanted to take a steam bath, I could not have designed a more effective or better insulated cauldron than the tent I sat in during two days totally, completely, absolutely without so much as a zephyr, without a single hint of an intimation that a single molecule of air could move.

It wasn't warm. It wasn't hot. It wasn't steaming (you need water for that). It was an inferno that would have given Dante religion. It was akin to the surface of a minor dwarf star. I gave up on the napkins and my handkerchief, and just alternated between shaking my febrile head and taking short sprints out the tent flap in an effort to outrun my own sweat. At Twelve-thirty on Sunday, I threw in a towel that was so damp it couldn't have dried a gnat.

I'd say I had a lot of fun, but I guess it's obvious. Next year, I'll try CW.

73,

Bill W1AC

Hi Doug.....thanks for your comments.

Well, I count about 60 stations licensed for high-power digital TV operations nationwide on 7-13.....not a huge number by any means. Here in Arizona, there are very few remaining after the transition. The public safety folks, having failed to take any of the 138-174 spectrum from the military here (Mainly because of the Army base at Ft. Huachuca) are now looking at the possibility of getting some of that 174-216. I doubt that it will happen though.

Yes, there is no deadline yet, and the Commission hasn't indicated if they will eventually set a firm deadline for LPTV and Translators. There are a huge number of translators in northwest Arizona.....at a cost of over $3,000 each to convert the translators times about 50, plus the LPTV stuff in the Phoenix and Tucson metro areas. I think the FCC will allow at least 5 years, if not more, unless they're in the 60's spectrum. However, they're mostly already chased out of that area.

Because of the reasons you mentioned, I don't support allowing other services to access the "white space" between channels....just too many things that can go wrong and mess up a signal.....particularly a weak rural signal, and especially an analog translator channel.

I think the best we hams can hope for is some additional HF spectrum as shortwave broadcasting slowly dies. Sure would like to see 30M expanded, as well as a full band at 5 MHz, and an expanded 20 and 17 M bands. Of course, we still need to clear 7200-7300 worldwide. Good Luck :>)

Anyone for another round of "buzzword bingo"?

Briefly, it means interoperability. The running joke of course is
that "Analog has always been inter operable". In context to the
various divergent digital encoding (not encryption) schemes out
there.

Sort of like a properly designed Java(tm) application working
properly regardless of what operating system you're running it
on.

The military has traditionally been a closed environment with
"this project uses this system" which makes passing information
between the systems difficult at best.

But then, the tower of babel was the original solution to the
one world government issue. ;-)

Hans, as a retired Senior Master Chief, and with your experience in
the civilian side of the industry, you are undoubtedly aware that that
is a buzzword to justify awarding a contract to some "favorite son"
consultant/manufacturer who will deliver equipment that the guys "on
the street" so to speak will beta test and find all the bugs and come
up with practical solutions that the contractors couldn't think of -
stuff that ham operators used to do "back in the day".....

There, I've had my rant.....

You and I both know, Rick, that one of the main reasons will be that "The Big M" (ham content: owner of Yaesu) will not be interested in producing two-way radio equipment in that band because of the relatively small sales volume as compared to their new whiz-bang 700 MHz systems that will require ten times as many sites for the same coverage.

Another rant expelled....

I have very little sympathy for the LPTV folks in that regard. They wanted to play with the "big dogs" by running a TV station but don't want to do what the "big dogs" have to do to stay on the air. Don't even get me started on LPFM......

I wish that the ham community had as much clout with The Congress and the FCC as the LPTV people have - maybe we'd get the legislation that we need to solve important problems, like pre-emption of CC&Rs for antenna towers and better protection from interlopers, be they primary users or not (my two hot buttons).

Hi and tnx for reading my message.

I've a Kenwood TH-27 but unfortunatly its NiCD Battery Pack (ref.
Kendwood PB-13, DC 7.2V 700mAh) don't recharge well at all.

Where can I find a new one or something equivalent ?
Any suggestion are more than welcome.

tnx in advance

I think you're working from a very early table. I count 137 stations currently licensed to operate DTV stations on these channels. Those are interim operations. Another 300 or so stations will be moving their DTV operations to 7-13 from other channels, usually UHF.

Here in Arizona, there are very few
> remaining after the transition. The public safety folks,

I count eight. There are nine analog stations currently operating in tha
t
spectrum in the state.

To pick two more states more or less at random:

Kansas: 11 analog stations in 7-13 today.
2 interim DTV operations in 7-13 today.
13 permanent DTV operations in 7-13 after transition.

Pennsylvania:
7 analog stations in 7-13 today.
4 interim DTV operations in 7-13 today.
9 permanent DTV operations in 7-13 after transition.

>From a FCC document dated February 11th:
"While the February 17, 2009 deadline for ending analog broadcasts does not apply to low-power, Class A, and TV translator stations, the FCC will require these stations to convert to digital broadcasting sometime thereafter. ... The FCC is currently considering the remaining issues inv
olved with the

low-power digital transition and will make decisions regarding these stations in the future. "

I read that as meaning that they *will* set a firm deadline.

My two-year figure, on the other hand, is just my gut feeling. Your five year + figure could well be right. (but I doubt it)

Most NiCad batteries stop working properly after 2-3 years.

==> ARRL TELLS RED CROSS OF REMAINING BACKGROUND CHECK POLICY CONCERNS

ARRL President Joel Harrison, W5ZN, has written to Armond T. Mascelli, Vice President for Domestic Disaster response for the American Red Cross (ARC) to identify the ARRL's remaining concerns over the background check policy for ARC partners. Harrison emphasized that the commencement of negotiation of a replacement Statement of Understanding (SOU) between the two organizations should not be further delayed while these concerns are resolved and that he looked forward to signing a new SOU once additional edits to the background check Disclosure Form and clarifications of the background check Authorization Form are in place for those radio amateurs who volunteer their service to the Red Cross.

Harrison first wrote to Mascelli on November 28, 2007, setting out the ARRL's concerns with the background check procedures recently implemented by the ARC. ARC now requires a background check for Amateur Radio volunteers seeking to support a Red Cross disaster relief response for more than a seven day period. In the ARRL's view, Amateur Radio volunteers were being asked to consent to a more intrusive background check than was necessary or appropriate.

Mascelli's reply on May 8, 2008, addressed some of the ARRL's concerns and Harrison's latest letter to the ARC -- sent on June 30, 2008 -- recognizes considerable improvement in the forms related to the background check procedures that are linked via the ARC's Web site; however, Harrison also states that analysis of the forms has revealed two continuing problems:

* The Authorization for Background Investigation consent form still contains "some highly equivocal and broad language which, because of its ambiguity, will inevitably discourage substantial numbers of radio amateurs from participating in the background check process." This form was not included with Mascelli's reply and was not seen by the ARRL until later.

* The "Disclosure Regarding Background Investigation" can still be construed as overly broad, although this can be corrected by fairly simple edits.

Harrison told Mascelli, "We do not want the implementation of these additional changes to further delay the negotiation of the terms of a replacement SOU. A new SOU is, in my view, a critical and urgent matter. Because the old SOU expired on September 16, 2007, the vacuum thereafter has served neither ARRL nor ARC well." ARRL and ARC staff are ready to work on a draft replacement SOU, the text of which will be reviewed by the ARRL's Programs and Services Committee and approved by either the Executive Committee or the Board prior to completion.

Harrison concluded, "We look forward to continuing to provide seamless disaster response communications by Amateur Radio and to enhancing and expanding ARRL's proud partnership with the American Red Cross. I look forward to meeting with you and executing the new SOU once additional edits to the Disclosure Form, and adequate clarifications are included in the Authorization Form that appears on your web site for partner organizations are made, and when the new SOU terms are agreed upon."

==> AN ERA COMES TO A CLOSE AS RILEY HOLLINGSWORTH, K4ZDH, RETIRES

On Thursday, July 3, Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau Riley Hollingsworth, K4ZDH -- the man who has come to embody Amateur Radio Enforcement -- said goodbye to the FCC as he retired and began his life as a private citizen. In May, Hollingsworth announced he would definitely retire; he had contemplated retiring in January 2008, but cited "several issues on the table that I want[ed] to continue to work through with the amateur community." While his successor has not yet been named, he was quick to

point out that the FCC's Amateur Radio enforcement program will continue.

Hollingsworth said that he has "loved" working for the FCC and has "always had great jobs, but this one involving the Amateur Radio Service has been the most fun and I have enjoyed every day of it. I've worked with the best group of licensees on earth, enjoyed your support and tremendous FCC support and looked forward every day to coming to work. The Amateur Radio Enforcement program will continue without missing a beat, and after retirement I look forward to being involved with Amateur Radio every way I can. I thank all of you for being so dedicated and conscientious, and for the encouragement you give us every day."

Saying it has been a "privilege to work with and for the Amateur Radio licensees and the land mobile frequency coordinators," Hollingsworth said that he is "extremely fortunate to work for two wonderful groups of people: Those at headquarters in the Enforcement Bureau, and for the Amateur Radio operators."

Before joining the FCC, Hollingsworth, a South Carolina native, graduated from the University of South Carolina and Wake Forest University School of Law. While in high school, he worked as a disc jockey for WRHI, an AM station in Rock Hill, South Carolina. "It's a funny thing," Hollingsworth said. "They once held a beauty pageant in Rock Hill and nobody won!" In the mid-1970s, he was a "Nader's Raider" and worked on brown lung disease in the North and South Carolina textile mills.

"Basically I'm just an ordinary guy caught in the cross-hairs of radio history," Hollingsworth said. "But I am proud of the fact that the digital clock on my VCR has been blinking for 4 years."

Hollingsworth told the ARRL he was "so very impressed" with the young people who are involved with Amateur Radio: "To the very young Amateur Radio operators I have met who have dreams of being scientists and astronauts and communications engineers, we will be pulling for you; I have a strong feeling we won't be disappointed."

Calling the Amateur Radio Service a part of the American heritage, Hollingsworth explained that he is "going to stay as actively involved in it as I possibly can. Thank you all for working tirelessly to provide the only fail safe communications system on Earth and for helping this country keep its lead in science and technology. What an incredible gift it has been to work with you every day, and how fortunate we are to love the magic of radio! Every gift of lasting value comes with responsibility. We must never forget what we owe for our spectrum privileges. I will continue working with you in every way I can to ensure that Amateur Radio lasts a thousand years. "

==> PHILADELPHIA AREA HAMS NAIL ROGUE RADIO SIGNALS

When residents of a Philadelphia suburb complained <http://www.nbc10.com/investigators/16701097/detail.html?dl=mainclick>

to an area television station about how their remote car door entry devices wouldn't work in the parking lot of a local department store, an investigative reporter for NBC-10 (WCAU) called everyone she could to help her discover why. No one knew anything -- until she called on some local ham radio operators.

"Many people lock and unlock a car by remote and don't even give it a second thought unless it doesn't work," said NBC10 reporter Lu Ann Cahn. "The mystery problem repeatedly occurs outside the Kohl's store in Royersford. When I went into Kohl's [to ask about this], they told me they had no idea [about this]."

Cahn said that shoppers told her that this has been going on for more than a year, and that some shoppers don't realize they might have to manually lock their doors: "One woman reported her laptop was stolen from her car after she thought she had locked it."

Shoppers theorized that it was the local power plant causing the interference, but Cahn said that officials at the plant said it wasn't them. Others thought that cellular telephone towers might be the culprit, but there are no cell towers in the area. "Police tell us that they can't figure it out either," Cahn said.

So after calling numerous places to help her out with this mystery, Cahn happened upon Reggie Leister, N3KAS, and Bob Rex, K3DBD, of the Pottstown Area Amateur Radio Club <http://www.paarc.net/>; Rex is Vice President of the club and Leister is the club's Public Information Officer (PIO). And as hams do, they were quick to volunteer to help out.

Leister and Rex accompanied Cahn to the parking lot in question. Rex built an antenna out of aluminum tubing and hooked it up to a spectrum analyzer. "Somewhere in the vicinity of this parking lot," Leister said, "there is a big source of radiation, some sort of signal." When Leister aimed the antenna in the direction of the Kohl's store, he hit pay dirt. "There are actually two signals there. It looks like [they're] coming from the building," Rex said when he read the analyzer.

Leister and Rex moved in closer to the building and pinpointed that one signal was coming from one set of doors, while the other signal emitted from another set of doors. Rex, an engineer, said that the thing that bothers him about this is that the signals "are running constantly." When Cahn approached Kohl's management with their findings, she was told that "they will look into it."

"The FCC licenses radio signals and these ham radio operators say the fact that some signal is interfering with remote locks isn't good," Cahn said in her report. Rex concurred, saying, "The FCC rules are pretty clear on that. It might be something that's broken." Leister and Rex agreed that the store security sensors located at each set of doors might be the culprit.

Three days after Leister and Rex located the source of the interference, remote car door lockers worked again. "Kohl's will only say that they're

working on it," Cahn said. "The FCC says it does sound like something malfunctioned and they have had reports of similar incidents in New York City and Tampa, Florida."

A few days after they found the signals, Leister explained that he and Rex did not think the anti-shoplifting detectors were the problem: "What we are guessing here is that they are probably connected to some kind of device that triggers a security camera to come on if there is a breach. Except instead of just sending out a quick 2-5 second (Part 15) blip, these seem to be on continuously and exceeding the permissible signal levels."

Cahn was quick to give on-air credit to the local hams who stepped up to the plate and helped crack this mystery: "We here at NBC10 were so curious as to why these remote car locks would just stop working, so we thought we should really try to solve this mystery. I have to give kudos to Reggie Leister and Bob Rex with the Pottstown Area Amateur Radio Club. They were so great and so excited. You don't know how many people we called -- police, Triple A, car dealerships -- we called so many people trying to figure this out and nobody knew anything until we talked to these ham radio operators. They were so wonderful and they knew all about radio signals. They created their own gadgets to help us figure this out. We really want to thank them for their help with this."

==> GET READY FOR THE IARU HF WORLD CHAMPIONSHIP NEXT WEEKEND

HF Contesting usually hits a dry spell during the summer months, but the weekend of July 12-13 brings a summer bright spot for HF contesters -- the IARU HF World Championship.

According to ARRL Contest Branch Manager Sean Kutzko, KX9X, the IARU contest is a little different from most major HF contests. "For starters, it's only 24 hours long (instead of the normal 48). This leaves you plenty of time over the weekend to have fun in the contest and participate in other activities. Another difference is that you can combine modes. While most HF contests are either CW or SSB, IARU allows you to operate CW, SSB or a mixture of both. Lastly, the IARU contest exchange is a signal report and your ITU zone." ITU zones are different than CQ zones, Kutzko said. For a map of ITU zones, you can visit the IARU Web site <http://www.iaru.org/ituzonesc.gif>.

One of the features of the IARU contest is the highlighting the IARU member Amateur Radio organizations from all around the world. These organizations often participate in the contest with a special call (often ending in "HQ," designating a national headquarters station) and can be worked as special multipliers in the contest. Kutzko said that IARU Administrative Council members from around the world will also be on and can also be worked for special multiplier credit. "If you hear a station giving R1, R2, R3 or AC as their contest exchange, that station represents part of the IARU Administrative Council or regional Executive Committee."

The IARU HF World Championship runs from 1200 UTC Saturday, July 12 to 1200 UTC Sunday, July 13. For complete rules and forms, you can visit the IARU Contest Web page <http://www.iaru.org/contest.html> or the ARRL Contest Web page <http://www.arrl.org/contests>.

==> CHECK OUT THE JULY/AUGUST NCJ

NCJ, The National Contest Journal is what everyone interested in radiosport needs to have in their shack. Filled with the latest news from the contesting world, NCJ is the voice of radiosport. Whether you are new to contesting or are a seasoned pro (or somewhere in the middle), you will find something in NCJ just for you.

In the July/August issue, Paul Mackanos Jr, K2DB, remembers "Remote Operation and Contesting at K2NNY/K2DB." Ed Muns, W0YK, provides "A Contester's View of Visalia," and Tom Taormina, K5RC, looks at "The Next 3 dB." Calvin Darula, K0DXC, gives "A 13-Year-Old's Perspective on Amateur Radio and Contesting."

If you've been waiting to see how you did in the January and February contests, you definitely don't want to miss this issue! Shelby Summerville, K4WW, give readers the rundown on the February 2008 NAQP RTTY Contest. Bruce Horn, WA7BNM, looks at the results of the January 2008 NAQP CW and SSB Contests. Jim Stevens, K4MA, gives his take on the February 2008 North American Phone Sprint and Tree Tyree, N6TR, ponders the February 2008 North American CW Sprint.

Of course, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks & Techniques," by Gary Sutcliffe, W9XT; "Propagation," by Carl Luetzelschwab, K9LA; "VHF-UHF Contesting," by Jon Jones, N0JK; "Contesting on a Budget," by Paul Schaffenberger, K5AF; "DX Contest Activity Announcements," by Bill Feidt, NG3K; "RTTY Contesting," by Don Hill, AA5AU; "Contesting 101," by Kirk Pickering, K4RO, and "Contest Calendar," by Bruce Horn, WA7BNM.

All this and more in the July/August issue of NCJ. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. Subscribe today <http://www.arrl.org/ncj/>!

==> FCC ENFORCEMENT ACTIONS

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to William G. Aber, Sr, N2JAI, of Green Creek, New Jersey, alerting him that "[t]he control operator of the KC2JPP repeater, operating on 449.875 MHz, has requested in writing that [Aber] refrain from use of the repeater." These requests, the Commission, noted, were due to Aber's "failure to follow operational rules set forth by the licensee/control operators of the repeater system for its users." Aber had been issued verbal requests to refrain from using the repeaters in the past, but he has, according to the Warning Notice, "apparently ignored both verbal and written requests."

Saying that Aber refused delivery of the letter from the repeater owners, Hollingsworth reminded Aber of the FCC's rules that require that "repeaters be under the supervision of a control operator and [the FCC] not only expects, but requires, such control operators and licensees to be responsible for the proper operation of the repeater system. Control operators may take whatever steps are appropriate to ensure compliance with the repeater rules, including limiting the repeater use to certain users, converting the repeater to a closed repeater or taking it off the air entirely."

Aber was warned to stay off the KC2JPP system and any other such request by a repeater licensee, control operator or trustee. If he chose to ignore this request, the FCC would initiate enforcement action against his license -- which can include revocation, monetary forfeiture or a "modification proceeding to restrict the frequencies on which [he] may operate N2JAI." Fines normally range from $7500-$10,000.

Hollingsworth also sent a Warning Notice to Gateway Coal Mine in Coulterville, Illinois concerning that company's unlicensed radio operation. Citing a complaint made to the FCC, Hollingsworth stated that "your company has been using unlicensed radio equipment. The frequency is 146.400 MHz and is an Amateur Radio Service frequency, not a business or public safety frequency."

Hollingsworth advised Gateway Coal Mine that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications Act of 1934, as amended, 47 U.S.C. Section 301 "and will subject you to fine or imprisonment, as well as an in rem seizure [forfeiture of physical assets] of any non-certified radio transmitting equipment, in cooperation with the United States Attorney for your jurisdiction. Monetary forfeitures normally range from $7,500 to $10,000." Hollingsworth recommended that Gateway Coal Mine contact their radio service technician in order to correct the situation.

Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to the FCC Spectrum Enforcement Division <fccham@fcc.gov>.

==>SOLAR UPDATE

Tad "I am too much in the Sun" Cook, K7RA, this week reports: The weeks seem to drag on with no sunspots in sight. An image from helioseismic holography on Tuesday shows a spot on our Sun's far side. We hope it emerges in a week or 10 days on our side and hasn't died out by then. Spots emerge from time to time, but they are all old Solar Cycle 23 spots and they seem to fade quickly without much activity. Sunspot numbers for June 26-July 2 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.4, 66.1, 65.9, 66.6, 66.7, 65.6 and 65.9 with a mean of 66. Estimated planetary A indices were 16, 8, 7, 8, 6, 5 and 3 with a mean of 7.6. Estimated mid-latitude A indices were 17, 7, 6, 7, 5, 4 and 1 with a mean of 6.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this

week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the Digital Pentathlon is on July 4 and the MI QRP July 4th CW Sprint is July 4-5. The VK/Trans-Tasman 160 Meter Contest (Phone) is July 5. On July 5-6, be sure to check out the Venezuelan Independence Day Contest, the WLOTA Contest, the DL-DX RTTY Contest, the Original QRP Contest and the PODXS 070 Club 40 Meter Firecracker Sprint. The DARC 10 Meter Digital Contest is July 6 and the RSGB 80 Meter Club Championship (CW) is July 7. Next weekend, the NCCC Sprint Ladder is July 11 and the FISTS Summer Sprint is July 12. The IARU HF World Championship is July 13, as are the SKCC Weekend Sprintathon and the ARCI Summer Homebrew Sprint. The RSGB 80 Meter Club Championship (SSB) is July 16 and the NAQCC Straight Key/Bug Sprint is July 17. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, July 6, 2008 for these online course sessions beginning on Friday, July 18, 2008: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the Continuing Education course listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL to Close in Observance of Fourth of July: ARRL Headquarters will be closed in observance of Independence Day on Friday, July 4. There will be no W1AW bulletin or code practice transmissions that day. The ARRL Letter and ARRL Audio News will be posted a day early on Thursday, July 3. League Headquarters will reopen Monday, July 7 at 8 AM Eastern Daylight Time. We wish everyone a safe and festive holiday weekend.

* ARRL Audio News Returns to Phone Lines: We are pleased to report that ARRL Audio News can once again be accessed via telephone at 860-594-0384; it had been down for a few days due to equipment failure. Compiled and edited from The ARRL Letter, ARRL Audio News is available on the League's Web site for two weeks and via telephone for one week after publication. We are sorry for any inconvenience the outage may have caused

* USI to Host Special Event Stations: The United States Islands (USI) awards program will host a series of special event stations -- including their main club station KL7USI -- from all over the US, Alaska and the Yukon celebrating 15 years on HF. Starting summer 2008 throughout 2009, look for USI activities on 14.260 MHz and other bands. USI is the premiere state island collecting program. Check USI website for further details <http://www.usislands.org>.

* ARRL Contest Update Offers Valuable Information for All: Every two weeks, H. Ward Silver, N0AX, produces the ARRL Contest Update. Each issue is jam-packed with information for all operators, be they involved in radiosport or not, such as operating and technical tips, propagation information and a focus on a technical Web site each issue. Of course, everything you need to know about upcoming contests is right there at your fingertips. Since the ARRL Contest Update is available in HTML, there is a link to the rules for each individual contest listed, as well as pictures. ARRL members can subscribe the ARRL Contest Update on the ARRL Web site <http://www.arrl.org/contests/update/about.html#get>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Ain't it amazing how 10 and 15 meters are "open" when people get on
the air? I was working lots of short skip (sporadic E?) on both bands.

Art, N2AH

I think you're working from a very early table. I count 137 stations
currently licensed to operate DTV stations on these channels. Those are
interim operations. Another 300 or so stations will be moving their DTV
operations to 7-13 from other channels, usually UHF.

Here in Arizona, there are very few
> remaining after the transition. The public safety folks,

> Huachuca) are now looking at the possibility of getting some
> of that 174-216. I doubt that it will happen though.

I count eight. There are nine analog stations currently operating in tha
t
spectrum in the state.

To pick two more states more or less at random:

Kansas: 11 analog stations in 7-13 today.
2 interim DTV operations in 7-13 today.
13 permanent DTV operations in 7-13 after transition.

Pennsylvania:
7 analog stations in 7-13 today.
4 interim DTV operations in 7-13 today.
9 permanent DTV operations in 7-13 after transition.

Well, here in Southern California (Los Angeles + San Diego), each of 7-13 is
actually occupied with a full-power TV station and will continue to be. The
odd channels are for LA and the evens for SD (12 for Tijuana, Mexico).

The best grab we could hope for is perhaps "Channel 2" - at 54-60 MHz and
being adjacent to our 6 meter band.

Answering my own question: the folks at Hirsch in Williamsville had what I needed and were very helpful. 219 California Drive, and you won't believe it until you go there.

At least the interim channel for the Tijuana station is 32 - it's unclear to me as to whether Mexican stations will be allowed to return their DTV operations to their current analog channels.

Amateur Radio Newsline(tm) Report 1612 - July 4, 2008

Now, Amateur Radio Newsline report number 1612 with a release date of Friday, July 4th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. The numbers are in and ham radio is growing once again. Also, China's hams stand down from their post earthquake communications effort and 17 year old Emily Stewart, KC0PTL, is named 208 Amateur Radio Newsline Young Ham of the Year. Learn all about her on this weeks Amateur Radio Newsline report number 1612 coming your way right now.

(Billboard Cart Here)

**

RADIO HONORS: EMILY STEWART, KC0PTL, NAMED 2008 ARNEWSLINE YOUNG HAM OF THE YEAR

A 17 year old from Leavenworth, Kansas, with interests as diverse as astronomy, pharmacy and public service theough amateur radio has been named as the 2008 Amateur Radio Newsline Young Ham of the Year. Mark Abramovich, NT3V, who happens to chair the award committee is here with the story of Emily Stewart, KC0PTL.

--

"This is really, really awesome. I'm really shocked!"

Those the words of the 2008 Young Ham of the Year, Emily Stewart after learning at the end of a finalist telephone interview that she had been chosen from among more than two dozen nominees for the prestigious award.

And, there is more. "I feel really, really honored," Emily says. "I think, oh, man. This is like such an awesome opportunity for, I don't know.

"I was talking with my dad about it and he said, you know, 'How would you feel if you won it?

"And I told him: Well, it would be because it would be a great opportunity to show kids that like even though people in the general public may not know what it is, if you work hard with radio and if you make a true commitment to it and if you take it and run with it that you really can get recognized for your achievements."

Emily is the daughter of Mike and Sharon Stewart. Mike is K0MDS. She is heading into her senior year at Leavenworth High School where she's a member of the National Honor Society, vice president of the Fellowship of

Christian Athletes, and is a copy editor for the school yearbook.

Emily is an only child and says she has lived in Kansas for eight years. Prior to that, home was Germany where her father was serving in the military. She credits her dad for sparking interest in amateur radio when they moved back to the United States.

"I thought it was really cool when he started talking to people overseas in Europe," Emily recalls. "And, Germany was still kind of home to me so when he started talking to people in Germany I said I wanted to do that too."

Emily earned her Technician license in August 2003. Emily says she was so excited about her new hobby that she wanted to share it with others and made presentations at school during her sixth-and seventh-grade years. That led to getting active in her local radio club and even contributing articles to the club newsletter. Emily's activity also led to her an appointment as the first Assistant Section Manager for Youth in the Kansas section, a job she has held since 2006.

She upgraded to General in April 2007. Last August, while attending the Kansas state convention, Emily asked how many had persuaded their children or grandchildren to get involved in amateur radio. The slim response of the attendees led her and Brian Short, KC0BS to develop the Kansas Legacy Project. The purpose: Encouraging hams to get the younger members of their families to get a ham license and get involved. The project has netted good results in the Kansas Metro area, including one of the youngest hams in the region to be licensed - 7-year-old Lucie Goodhart, KD0DMO, who took a license class with her dad and passed her Technician test last March.

Emily's path has also crossed that of another former Young Ham of the Year, Andrea Hartlage KG4IUM at the Dayton Hamvention where she helped run the youth lounge and ran the youth dinner for young hams. But Emily says her other passion is public service and storm spotting.

"My dad would sometimes take me out with him to go storm spotting and I decided that I wanted to have some training so I took a couple of online courses in emergency communications, " Emily says. "And, either I will go out with my dad when we get called out to do some storm chasing.

"Or I will stay at home and do spotting from home just in case something really nasty does happen then that way I'm home with my mom."

Emily says she also enjoys checking out the satellites: "I really like listening to satellite communications," Emily says. "We have this little satellite antenna and we use a program to track the satellites.

"And we follow the satellite with the antenna and listen to what people are talking to and who they're talking to and where they're from.

"And, we heard all the way from California. And that's one of my favorite things to do.

"I also really like packet. It's pretty cool."

Emily is a member of the Kickapoo QRP Amateur Radio Club and the American Radio Relay League. She's also a regular participant in Field Day, Kids Days and QRP events.

Emily was nominated by Susan Backs KC0JCR, XYL of Paul Backs KC0JCQ, Leavenworth's Emergency Coordinator for ARES activities. Susan summarizes Emily this way:

"Her leadership, her outreach, technical and public service achievements mark her as an outstanding example to other young amateurs."

The Young Ham of the Year Award Committee wholeheartedly agreed.

Congratulations, Emily, from all of us.

For the Amateur Radio Newsline, I'm Mark Abramowicz NT3V, chairman of the Young Ham of the Year Committee, reporting from Philadelphia.

--

Please join us in congratulating Emily Stewart, KC0PTL, on being named the 2008 Amateur Radio Newsline Young Ham of the Year (ARNewsline(tm))

**

HAM RADIO STATES: THE LATEST NUMBERS FROM K3UD

According to George Mc Couch, K3UD, it looks like the overall number of licensed radio amateurs numbers have increased by 873 from April through June 2008.

George says that the Technician and Technician Plus category had large increases while General had a smaller increase. On the downside, Novice license holders declined by 299 and Advanced declined by 2,134.

Further breaking down the numbers, George says that the Technician license had gains of 1,856 over the reporting period and is still the most popular license for newcomers. He says that it is continuing to make good gains over the last 3 quarters. However, it also seems that the large movement from hams upgrading to General has slowed to trickle over the last 9 months.

On the other hand K3UD says that we are seeing very good movement in upgrading to the highest class with increases of 1,447 hams earning the Extra Class. He says that this increase about matched the last quarter in terms of growth.

George says that his figures are based on a comparison of two snapshots of the numbers taken at two different times. He says that the numbers do change every day, sometimes increasing and sometimes decreasing. He say that he always uses the last day of previous reporting period and the last day of the present reporting period as his points in time.

K3UD unofficially took over reporting ham radio license statistics at about the same time that Fred Maia stopped publishing his W5YI Report newsletter. George provides a truly valuable service to the nations ham radio community. You can see his actual figures on the news pages at

www.qrz.com. (K3UD, QRZ.com)

RESCUE RADIO: CHINA'S HAMS STAND DOWN FROM QUAKE COMMUNICATIONS

The emergency communications provided by China's radio amateurs in the aftermath of the devastating magnitude 8 Sichuan earthquake has now ended, although some remain on standby for rapid re-activation if needed. Jim Linton, VK3PC, has a wrap up on this great ham radio humanitarian ham radio effort:

--

IARU Region 3 Chinese Radio Sports Association disaster communication liaison Fan Bin BA1RB reports that several hundred hams took part to help the disaster recovery and relief efforts.

This began almost immediately after the huge ï¿½quake on the 12th of May and it continued through until the 13th of June.

A number of radio amateurs traveled into the epicentre area, a difficult task due to earthquake damaged roads, to set up communications.

In the early days long distance telephone lines were either cut or congested and this is where amateur radio HF links including one in the provincial city of Chengdu to give the Red Cross a link to Beijing.

VHF and UHF repeaters were in heavy use, both those which survived the quake and others pressed into service to provide much needed local communications including front line rescue and recovery activity.

Amateur radio was used to provide coordinating communications for cars that were used to ferry supplies and transport the wounded immediately after the quake.

Amateur radio operators across the country made donations of equipment and supplies and the CRSA thanks them and all international radio societies and individuals for the support given.

The CRSA has produced a powerpoint slide presentation to give an overview of the role emergency communications provided during the disaster, and what it proposes for the future.

The slide show was presented at the fourth Global Amateur Radio Emergency Communications Conference in Friedrichshafen, Germany, by the IARU Region 3 Chairman, Michael Owen VK3KI.

For the Amateur Radio Newsline, I'm Jim Linton VK3PC, Chairman of the IARU Region 3 Emergency Communications Committee.

--

As we reported last week, China's radio and television networks have heaped praise on that nations amateur radio community for their life saving post

earthquake effort. (VK3PC)

RESCUE RADIO: NATIONAL PREPAREDNESS MONTH COALITION GROWS

The United State Department of Homeland Security has announced that more than 1,200 national, regional, state and local businesses and organizations have pledged their support and joined the 2008 National Preparedness Month Coalition.

Sponsored by the department's Ready Campaign, National Preparedness Month was created to help to raise awareness and promote action by Americans, businesses, and communities on the issue of emergency readiness.

Launched in 2003 in partnership with The Advertising Council, the Ready campaign is designed to educate and empower Americans. This, to prepare for and respond to emergencies, including natural disasters and potential terrorist attacks.

This past February marked the Ready Campaign's fifth year at the Department
of Homeland Security. For more information on it and on National Preparedness Month, please visit www dot ready dot gov on the World Wide Web. (DHS Release)

**

RESCUE RADIO: FIELD DAY PLANE CRASH AND FIRE IN NEVADA

Members of the Frontier Amateur Radio Society and guest hams operating the N7V Field Day station on Mt. Charleston, Nevada likely will not receive any bonus points for what they experienced. But it was a real-life lesson in why we do Field Day in the first place.

Just hours after Field Day began last Saturday, in a canyon near the station site a singe engine Piper Cherokee en route to California, crashed. All for people on board were killed. The crash sparked a fire, which quickly spread in the wilderness area. Neither crash site nor the flames were visible at the nearby Toiyabe National Forest campground where N7V was on air.

Soon the N7V operators and other campers began receiving conflicting information as to whether they had to evacuate. With spotty cell phone coverage in the national forest, ham radio was the quickest way to

ascertain whether everyone needed to leave. .

Field Day operations were suspended as Steve Herman, W7VOA, contacted Dudley Emer, KK7IF on two meters. He telephoned the park service emergency operator to get more information. At the ame time, John Bigley, N7UR, headed down the mountain to get direct word from police. The remaining hams and campers began packing, preparing for a quick departure in case they had to make a quick retreat. But word soon reached them that the evacuation order had been lifted. Operations resumed for N7V after the equipment was connected for a second time.

And heres the kicker. Steve Herman, W7VOA, is an international newsman. He also holds the call VU3USJ and currently lives in New Delhi, India. He was on a trip home when this incident occurred. (W7VOA)

RADIO LAW: FCC PROPOSES CREATING FREE WIRELESS INTERNET ACCESS NATIONWIDE

Free high speed Internet for all. The FCC has released a Further Notice of Proposed Rulemaking in docket item FCC 08-158. One that proposes public access to free, nationwide, high-speed wireless broadband Internet services using a portion of the winning bidder's network for the 2.1 GHz Advanced Wireless Services or A-W-S spectrum. Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

--

The FCC's June 20th Further Notice of Rule Making proposes requiring the licensee for the 2155 to 2180 MHz spectrum to provide using up to 25 percent of its wireless network capacity free. It would be a two-way broadband Internet service at engineered data rates of at least 768 kilpbits per second downstream.

An additional obligation associated with the licensee's free broadband service would include a requirement to provide a network-based filtering mechanism for the free Internet service. This, in order to protect children and families from unwanted content. There would also be a requirement that the network would allow for the use of open devices.

The build-out requirements for the licensee, as proposed, would be to provide signal coverage and offer service to at least 50 percent of the total population of the U.S. within four years. It would also have to reach at least 95 percent of the U.S. population by the end of the 10-year license term.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

The Notice also proposes permitting both downlink and uplink transmissions throughout the entire 2155 to 2180 MHz band. (FCC)

**

ENFORCEMENT: UNLICENSED BROADCASTER ON EMERGENCY FREQUENCY DINGED $18000

The FCC has issued a Forfeiture Order in the amount of $18,000 to someone identified only as a John Doe. This for what the Commission terms as a willful and repeated violation of Sections 301 and 325 of the Communications Act involving the operation of radio transmission equipment without a license in Largo, Florida. He or she is also accused of making these transmissions on the International Distress, Safety and Calling Channel l3 and of the transmission of false signals of distress.

Back on April 30th the Commission's Tampa Office of the Enforcement Bureau
issued a Notice of Apparent Liability for Forfeiture in the amount of $18,000 to the unidentified alleged offender. The FCC says that this John Doe has not filed a response. So based on the information before it, the FCC in a June 26th action affirmed its earlier forfeiture order. And as in other cases, our John Doe was given the customary 30 days from the June 30th the release of the order to pay or to file an appeal.

Why the FCC is withholding the actual name of the alleged offender has not been stated, but doing so is usually the case when a minor is involved or there are other extenuating circumstances. (FCC)

**

ENFORCEMENT: FCC TO NJ HAM - STAY OF THAT REPEATER

The FCC has issued a Warning Letter to William G. Aber, Sr., N2AJI, that in essence orders him to stay off of a local New Jersey repeater. This after he allegedly failed to heed the written request of the control operator of the 449.875 MHz KC2JPP repeater to refrain from use of the machine.

According to the FCC, that letter was issued to Aber as a result of his failure to follow operational rules set forth by the licensee or control operators of the repeater system for its users. The FCC says that Aber was previously requested verbally to refrain from using the system, but that he apparently ignored both verbal and written requests and that he refused delivery of the letter.

In its June 11th Warning Notice to Aber, the FCC says that it expects him to abide by the request to stay off the KC2JPP system and any other such request by a repeater licensee, control operator or trustee. If he uses the repeater again after receipt of its warning letter, that the FCC will initiate enforcement action against your license, which may include revocation, a fine or a modification proceeding to restrict the frequencies on which he may operate. Fines normally range from $7,500 to $10,000. (FCC)

**

ENFORCEMENT: KEEP THE COAL OFF 2 METERS

The FCC has issued a Warning Notice to the Gateway Coal Mine of Coulterville, Illinois. This, after receiving a complaint that the company had been using unlicensed radio equipment operating on 146.400 MHz.

In its June 26th letter to Gateway Coal Mine, the FCC said that 146.400 MHz is an Amateur Radio Service frequency, not a business or public safety frequency. It advised the company that operation of radio transmitting equipment without a license is a violation of Section 301 of the Communications and will subject its owners to a fine or imprisonment, as well as an seizure of any non-certified radio transmitting equipment. (FCC)

**

ENFORCEMENT: FCC FINES FACILITIES PROVIDER $10000

The FCC has affirmed a $10,000 fine issued earlier to to Frank Rodriguez of Patterson, New Jersey. This, for willfully and repeatedly violating Section 301 of the Communications Act by providing services and facilities
incidental to the operation of an unlicensed radio transmitter on the frequency 90.5 MHz.

Back this past April 9th, the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Rodriguez. This, after the FCC found an unlicensed station not under Rodriguez ownership but operating from his property.

Now in its June 30th release, the FCC says that to date that Rodriguez has not filed a response to the proposed fine. Therefore, based on the information before it ,the Commission had now affirmed the forfeiture and given Rodriguez the usual 30 days to pay or to file an appeal. (FCC)

HAM HAPPENINGS: 200TH LIGHHTHOUSE REGISTERS FOR LIGHTHOUSE WEEKEND

The 200th lighthouse to register for this summers International Lighthouse and Lightship Weekend is GB4KAY, the Kay Kendall Memorial Lighthouse, at Yorkshire, in the U-K. Built in the early 1890's due to a large number of shipwrecks nearby, it was later named in memory of the glamorous 1950s actress Kay Kendall who was born in the town.

The International Lighthouse and Lightship Weekend is conducted annually by the Ayr Radio Club of Scotland. The webmaster of its official website at WWW.ILLW.NET is Kevin Mulchay VK2CE. He says it's shaping up to be a big year and he would not be surprised if registrations topped 400 before the event gets underway (VK3PC)

**

HAM HAPPENINGS: INDIA TO HAVE LIGHTHOUSE ACTIVE LIGHTHOUSE WEEKEND

The first Indian lighthouse has also registered for International Lighthouse and Lightship Weekend. Bangalore Amateur Radio Club Secretary, Lion Ajoy, VU2JHM, says permission has been received to activate a lighthouse in southern India. A callsign is pending but it will be activated from the Indian Independence Day of the 15th of August through to the 18th which happens to include the International Lighthouse Weekend. (VK3PC)

CHANGING OF THE GUARD: STEREO TV INVENTOR CARL EILERS - SK

The electronic engineer who helped develop production of high-fidelity stereo sound over the airwaves has died. 83 year old Carl G. Eilers, Friday at his home in River Forest, Illinois, on June 26th of an apparent of a heart attack.

A 50-year employee of Zenith Electronics, Eilers joined Zenith in 1948 as an engineer in the research department working on a subscription television system called Phonevision. In 1977, he became manager of research and development and led the team that in 1961developed FM stereo broadcasting. Eilers was also co-developer of another key industry standard known as MTS or multi-channel television sound for stereo TV. Zenith's MTS system was adopted by the industry in 1984.

Eilers also worked on development of remote controls, laser-disc recording and supplemental audio programming. He also contributed significantly to high-definition television and was granted 21 U.S. patents.

Eilers retired in 1997 but returned as a consultant for the company, which is based in the Chicago suburb of Lincolnshire. He is survived by his wife of Sandra; his son John and a daughter Janet Ames. (Published reports)

PUBLIC SERVICE: SBE NEEDS RF VOLUNTEERS AT THE DNC

Its not exactly amateur radio but hams are the ones with the skill to help. This, as the Denver Colorado chapter of the Society of Broadcast Engineers puts out a call for skilled radio frequency volunteers for the upcoming Democratic National Convention. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the details:

--

According to the June 13th issue of TV Technology Magazine, broadcast engineering leaders in Denver are looking for volunteers to assist with wireless coordination and enforcement at the convention. Qualifications are knowledge of R F and broadcasting. Tasks will include meeting radio and TV crews and checking in their wireless equipment, monitoring for interference and evidence of non-coordinated equipment, and resolving problems. Test gear will be available, and the organizers hope to have their own 450 MHz channel for communication.

If you think that this sounds a lot like what ham radio coordinators do to keep repeaters on the amateur bands from interfering with one another, you are right. More information on how to volunteer is available at www.tvtechnology.com/pages/s.0018/t.13999.html

I'm Fred Vobbe, W8HDU.

--

As far as we know this is a non-partisan volunteer effort. The Society of Broadcast Engineers is not endorsing any party or candidate by this action. Its just providing solid R-F engineering practices to both conventions. (TV Technology, KN4AQ, WB9QZB,)

RADIO IN SPACE: SATELLITE INTERFERENCE GROWING

The problem of interference to the satellite signals of broadcasters and other space relay communications is getting worse. So says a high ranking executive of the satellite transmission company Intelsat.

According to a report carried by the Asia-Pacific Broadcasting Union, Khalid Chaudhry, Intelsat's Vice President of network operations recently made the comments during a meeting of the World Broadcasting Unions International Satellite Operations Group at in Atlanta. He said that interference is coming in all shapes and sizes, and the problem is becoming more critical because of global demand for the Internet, including services for ships and aircraft.

The account of Chaudhry's remark also quotes him as saying that while most interference is not intentional, a small amount is deliberate, some of it is possibly politically motivated. (RW)

HAM RADIO IN SPACE: FINAL CALL FOR COLLOQUIUM PRESENTERS

AMSAT U K has issued its final call for speakers and papers for its 23rd Space Colloquium. This event is slated to be held at the University of Surrey in Guildford, England, from Friday July 25th to Sunday July 27th. Offers of talks should be submitted as soon as possible. The final date for full documents to be received is July 16th in order that the printed "Proceedings" document be available to participants.

Submissions should be sent only to G4DPZ, by e-mail to david dot johnson at blackepper dot co dot uk mor via reguular mail to his address in Q-R-Zed dot com. Full details of this and previous events can be found on-line at www.uk.amsat.org/Colloquium (AMSAT-UK)

**

DX

In DX, word that PE9PE will be operating from SI9AM, which is the King Chulalongkorn Memorial Amateur Radio Society in Ragunda, Sweden. This,

through July 11th. Listen out for him on SSB on 1.840, 3.760, 7060, 14.210, 18.160, 21.310, 24.960 and 28.510 MHz. For US Stations he will announce the Q-S-X frequency on 40 meters and when needed on 75 and 80 meters. More info including QSL routes is on-line at www.si9am.se.

DL7DF and a team of operators will be active as portable A25 from Botswana. This, between September 23rd and October 6th. The group plans to have several stations on the air on 160 through 10 meters using CW and SSB. One station will be exclusively dedicated to RTTY, PSK31 and SSTV. QSL via DL7DF, either direct or by the DARC Bureau.

Lastly, ON7YK will be active from Gambia as C56YK between October 13th and November 9th. Operation will be on 80 through 10 meters and perhaps 160 meters as well. Modes announced are CW, SSB, RTTY and PSK31. This will be a holiday style operation. For more details and updates visit the www.on7yk.net

(Above from various DX news sources)

THAT FINAL ITEM: SOME THANK YOU'S FROM US TO YOU

And finally this week:

--

I'm Andy Jarema, N6TCQ with some thank-you's for supporters of Newsline.

First a huge one to the awesome Anchorage Amateur Radio Club and their continuing support of Newsline. Just a reminder that their big 2008 Hamfest and convention will be held August 1st through the 4th. It will be an official ARRL convention this year, celebrating the 50th year of Alaska statehood. Well have more on this in coming weeks, or you can check their website at akhamfest.com

Its been a while since we've done these thank-yous, so we have to go back to January of 2007. We heard from:

The Greensboro, NC Amateur Radio Association, W4GSO; Peter Norloff, KG4OJT of Oakton, VA; Monthly contributor Joseph Bartzi, Jr., KC8DKF of Columbus, OH; The Southwest Michigan Amateur Radio Team of Kalamazoo; The Indianapolis Repeater Association; Frank Gassmere, K9BWQ in Crestwood, IL; J. Steven Blaisdell, W0PER in Englewood, CO; The Superstition ARC in Mesa, AZ; Monthly contributors William Walters, WA2IBM, and Scott Hensley of the Area Communications Team, both in San Jose, CA and the South Orange Amateur Radio Association in Mission Viejo

Via PayPal there was Douglas Gilbert, WD6CZH and The Zerox ARC in El Segundo, CA; Andrew Engle in Saint Peters, MO; Matt Kraner, K8MAT, in Canton OH; Todd Champion in Champlin, MN; Sigtomics and Todd Siglin, WA2LTD in Vestal, NY; Murray Hunt, KB3LZV of Frederick, MD; Randy Dorman of Hampstead, MD; Mark McCormick, N4RK of Woodstock, IL; Christopher Spacone; Jimmy Reynolds, Jr. of Morristown, NJ; Brian Levy in Tehachapi, CA; Dennis

Hardy in Richfield, MN; Fred Bader, K3CSX of Gaithersburg, MD and Bill at Good Fortune Advisory, Woodland, CA.

Well have more thank-yous in upcoming weeks. Im Andy Jarema, N6TCQ.

--

Thanks Andy. (ARNewsline(tm) Support Fund)

At least the interim channel for the Tijuana station is 32 - it's unclear
to me as to whether Mexican stations will be allowed to return their DTV
operations to their current analog channels.

"What DTV operations?" Mexico decided to keep analog TV through 2025.

> the air? I was working lots of short skip (sporadic E?) on both bands.

Yes, I noticed that. Somehow I don't think it's all the RF that causes the ionization that makes the bands open.

I missed my club's FD operation for the second year in a row because I was deployed by the Red Cross on a disaster operation. This year I was assigned to a communications vehicle and used FD as the opportunity to run my personal test of its ham radio capabilities. My goal was to make at least one contact on each HF band, and I managed to hit 10, 20, 40, and 80 but missed 15 (and in retrospect I wish I had tried the mobile whip on 160). I didn't have much time but enjoyed the effort.

By the way, my answer to the question of whether FD is a contest, an emergency-preparedness training activity, or a party is "yes". It's a unique event with all of those attributes. Each is important. The contest aspect provides an objective evaluation of the success of the setup that is used, and the social aspect of the event builds important relationships and motivates people to participate. There's no reason that FD has to be one thing; it can fulfill several objectives at the same time.

73,
Steve KB9X

I guess I'll disagree, mildly, because I'm concerned that some readers might take the inference that the contest aspect of field day is an _objective_ evaluation of emergency-preparedness. To be sure, it's an evaluation of the hardware and antennas and operator skill, but being prepared to contribute in a disaster takes more than having a radio and antenna.

Field day is, and should be, a reminder that hams who are preparing to help in disasters must plan every detail _before_ they need to be effective, and must put that planning into practice several times _before_ it's needed. It's important to be a competent operator, but I don't feel that contest scores, per se, show who'll be the most organized beforehand, or who will be best-able to multi-task, tolerate a lot of ambiguity, juggle priorities, and suffer abuse from public officials and the served agencies, without losing their cool or making too many mistakes.

Contesting is about scoring. Disaster preparedness is about putting your ego on a shelf and being willing to deal with boredom, long waits, and assignments that are far from the TV cameras, very far from the flush toilets, and nowhere even close to the hot food or the TV lights or the glory.

73,

W1AC

When I chose the word "objective", I realized it was a stretch. I was trying to say that the contest aspect helps to evaluate success in how well the radios and antennas work. It's "objective" only in the sense of being slightly better than "seems like things worked better this year than last year." And it's just an indication of how well the hardware works, not of the overall effectiveness of the group that's running it.

> Field day is, and should be, a reminder that hams who are preparing to

I agree that FD scores don't correlate with success in an actual disaster. In fact, setting up an HF station and operating it using emergency power is unlikely to be an actual part of disaster operations these days. On the other hand, Field Day does provide training in multitasking, ambiguity, priorities, dealing with media, and general problem solving. Many skills that are useful in an actual disaster are exercised in a FD operation; the most important being the ability of the local group to work together to get things done.

Field Day, by itself, won't prepare a group for disasters. But a group that is doing things right -- ongoing training, drills, and planning -- will benefit by participating in the FD operation.

> Contesting is about scoring. Disaster preparedness is about putting your
> ego on a shelf and being willing to deal with boredom, long waits, and
> assignments that are far from the TV cameras, very far from the flush
> toilets, and nowhere even close to the hot food or the TV lights or the
> glory.

The point I was trying to make is that Field Day is more than a contest. There is a contest aspect, and it draws people who are avid contesters and treat it as nothing more than a contest; you can work FD from home in exactly the same way that you work SS or any other contest. It's also a training event, and draws people who are interested in emergency preparedness. And it's a social event and draws people who want to sit and chat with their buddies, but have no interest in getting on the air.

Field Day provides an opportunity for the insular groups to mix. The CW bigot might pick up a microphone. The VHF-only ham gets exposed to HF. The new ham who has never been in a contest learns how to operate one. The guy who only came to gab with his friends and hasn't been on the air for years gets on the air. The friend/relative who is visiting is exposed to ham radio. And everyone has a good time.

Emergency preparedness has many aspects. Building the general expertise and camaraderie of the local ham radio group makes it more effective if it's ever called upon in a real disaster situation.

.. Class: 2E
.. Ops: N7MCG (Phone), WA7PRC (CW)
.. Phone QSOs: 137
.. CW QSOs: 315
.. 100% Emergency Power + Message to Section Manager bonuses
.. Rigs: TS120S (CW) and TS130S (Phone)
.. Antennas: 80m cage inverted vee, 40/15m dipole, halfwave 20m vertical, Cushcraft A3S yagi
.. Power Source: 4 x Group27 wet cells in parallel (320Ah)

Not the best effort (total points: 1734) but I had fun operating at home for a change, with my longtime friend Evan N7MCG. We used my 'little' FD battery pack to run the rigs -- adequate power was NOT an issue. 40m was by far the payoff band for CW; 20m produced the most Qs on phone. 15m produced only a few Qs. 10m was d-e-a-d when I checked periodically. I finally got the Rigblaster Pro to work w/o RFI (Evan was happy to not have a hoarse voice afterward).

NAMES IN THE NEWS: FCC RULES ENFORCER RILEY HOLLINGSWORTH RETIRES

The man who took ham radio out of the hands of trouble makers and made it family friendly once again has retired from public service. Riley Hollingsworth, K4ZDH, who held the title of Special Counsel for the Spectrum Enforcement Division of the FCC's Enforcement Bureau officially retired from the agency on July 3rd. And in his final major public appearance at last May's Dayton Hamvention, he took a moment to thank the ham community for its support:

--

Hollingsworth: "You have a great service overall, and it's a major underpinning of the communications system in this country. And you demonstrate this on a daily basis. And we tank you all for the way you help us with enforcement in your radio service and every thank-you that you give us, believe me, is deeply appreciated. Thank you. (applause)

--

Hollingsworth came to the position of rules enforcer more than a decade ago. It was a time when years of neglect by the FCC had permitted many of the popular ham bands to become over run by a small but vocal number of licensed amateurs who had no respect for the rights of others. These were hams who seemed to believe that the Part 97 Amateur Service rules did not pertain to them. Hams who claimed that their jamming and harassment of others was constitutionally protected freedom of expression and freedom of speech. It was Hollingsworth who would change all of that.

It was not very long before some of the most high profile offenders began receiving warning notices from Hollingsworth. Those that ignored the

letters soon found that they were the subject of further FCC action. In some cases fines were issued. In others the FCC and the offender entered into agreements where the latter accepted operating restrictions or voluntarily surrendered their licenses for a given period of time.

There were also a number of license renewal set-asides. That's where a ham is not permitted to renew a license until a charged offense was adjudicated. It didn't take that person off the air, but was a clear message that the FCC had that operators on the air operating habits under a proverbial microscope.

That said, more than a few of the situations did not require FCC enforcement action. As Hollingsworth said in his Dayton address, many times complaints that he received got solved without any intervention at all:

--

Hollingsworth: "You would be amazed at the number of complaints I get that seem to be good complaints. And they are good complaints on the face of it. But if I check on them a few days later or a week or so later, the problem has gone away. A lot of it is unintentional or having second thoughts."

--

Whenever possible, Hollingsworth approach was that negotiation was a far better way to approach a given situation than going the route of license suspension or revocation. And in most cases it worked. In the small number where it didn't, he and others in the FCC's Enforcement Bureau were more than ready to act. And act the agency would.

In one rather egregious case in California, FCC enforcement action begun by Hollingswoth's office and that of the Los Angeles FCC Field Office lead to FBI involvement in the case of former ham Jack Gerritsen, the ex-KG6IRO. Eventually Gerritsen was arrested, tried and convicted on six counts that included willful and malicious interference with radio communications and transmitting without a license. In 2006 Gerritsen was sentenced to seven years in prison and fined $15,225.

But Gerritsen was the mot extreme of the extreme. In most cases, the first letter and maybe a phone call was all that was needed to make a problem go away. And in his remarks at Hamvention 2008, Hollingsworth reminded the audience that the number of hams who cause problems is relatively small:

--

Hollingsworth: "You have some poor operators and rude operators and operators who don't care and who are hateful and bitter about life in general, but every group has that. Whether its doctors, electricians, lawyers, whatever, Every group has a certain percentage of people like that in these time. But what you have to do, and remind yourself every day is to stay on the high road. And report to us if you can't resolve a

problem after you have given it a chance to go away."

--

And taking the high road was always what Riley Hollingsworth's tenure as Special Counsel for the FCC's Spectrum Enforcement Division was always all about. And by taking the high road, he helped to breath new life into our world of Amateur Radio.

For his efforts in helping to eliminate the problem of malicious interference that had been increasing on the ham bands Hollingsworth was named to receive the 2006 Dayton Hamvention Special Achievement Award. Now he's out of the ham radio limelight and hopes to enjoy many years of hamming. He also hopes to talk to many of you on the air from his home station, K4ZDH. (ARNewsline(tm))

**

RADIO SAFETY: RADIO SHACK AND CPSC RECALL TWO MODELS OF POPULAR POWER SUPPLIES

The U.S. Consumer Product Safety Commission, in cooperation with Radio Shack Corporation issued a recall notice on July 2nd. This, concerning two models of power supplies that the CPSC says places owners at risk of electrocution while also presenting a fire hazard.

The units recalled are 13.8V DC Power Supplies identified as Radio Shack catalog items 22-507 and 22-508. They were sold at Radio Shack stores nationwide from October 2004 through January 2008 for between $50 and $85. The units affected carry date codes from 08A04 through 01A08. Both the catalog number and date code are located on the back of the power supply.

The CPSC release says that about 160,000 of these units are in the hands of the public. It advises that consumers should stop using recalled products immediately unless otherwise instructed. Consumers should unplug the recalled power supply immediately and take it to any Radio Shack store for a free repair. Registered owners of the recalled units will be mailed a notice.

The Consumer Product Safety Commission release also notes that power supplies with a green dot on the product and on the product's packaging have already been repaired. Therefore, they are not included in the recall.

For additional information, contact Radio Shack anytime at 800-843-7422. Or you can visit the firm's website at www.radioshack.com/recall (CPSC public release)

**

RESCUE RADIO: ARRL TELLS RED CROSS OF REMAINING BACKGROUND CHECK POLICY CONCERNS

The American Radio Relay League is still not happy with the American Red Cross policy on background checks of ham radio volunteers and has told the relief agency it has to make more changes. Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

--

The ARRL Letter reports that League President Joel Harrison, W-5-Zed-N, has written to Armond Mascelli about the League's concerns and the need for further changes on the part of the relief agency. Mascelli is the vice president for Domestic Disaster Response for the American Red Cross.

In his note Harrison identifies the ARRL's remaining misgivings over the background check policy for American Red Cross partners. These include the Authorization for Background Investigation consent form which says Harrison still contains some highly equivocal and broad language. Language that because of its ambiguity will inevitably discourage substantial numbers of radio amateurs from participating in the background check process.

Also says W-5-Zed-N, the Disclosure Regarding Background Investigation form can still be construed as overly broad, although this can be corrected by fairly simple edits.

Even so, Harrison also emphasized that the commencement of negotiation of a replacement Statement of Understanding between the two organizations should not be further delayed while these concerns are resolved.

Harrison adds that he looks forward to signing a new Statement of Understanding once additional edits to the background check Disclosure Form and clarifications of the background check Authorization Form are in place for those radio amateurs who volunteer their service to the Red Cross.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

As we go to air there's no word if the American Red Cross has responded to this latest ARRL request. (ARRL)

**

RESCUE RADIO: OARS ASSISTS IN NORCAL FIRES

A ham radio group in Northern California has been praised in news reports. This, for its assistance as wildfires continue to scar the area.

The Chico Enterprise Record says that the Oroville Amateur Radio Society has supplied about 22 of its members to assist with evacuations, shelter work and animal rescue. The article quotes club president Larry Thompson as saying that radios have been set up in the basement of the society's station to aid in the all out emergency relief effort. Thompson, who the FCC records identify as KI6JTU says that the hams are using them to communicate with the Red Cross, Salvation Army and other agencies to transmit information 24 hours a day.

Thompson says that two or three people are in the station doing shifts ranging from 4 to 24 hours a day, but that the society is trying to provide as much relief for them as possible. The newspaper also quotes Thompson as saying that the Oroville Amateur Radio Society is upholding its underlying purpose. That is to be there when all else fails. (Chico Enterprise Record)

RADIO LOSS: ALGERIA CANCELS HAM RADIO 80, 17 METERS PLUS UHF AND VHF

Hams in Algeria have lost access to several popular bands. Bill Pasternak, WA6ITF is in the newsroom with more:

--

According to 7X5JF, Algerian authorities have revoked and cancelled all operating privileges for the use of the 80 and 17 meters as well as the various VHF and UHF bands. Telecommunications regulators in Algeria gave no reason for their action. Hams in Algeria are hoping for a quick return of privileges on these ham radio allocations.

Interestingly, 7Y46ND had previously announced that he would be on the air during July in commemoration of 46 years of independence in Algeria. His activity was to have included both 80 and 17 meters as well as the other High Frequency bands. No word on how the government action will impact on plans for 7Y46ND's in the air schedule.

I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

We will have more world highlights later on in this weeks report. (7X5JF, DL1BDF, OPDX)

**

RESCUE RADIO: PC WORLD MAGAZINE LAUDS HAM RADIO

PC World Magazine says that "When Networks Fail, Hams to the Rescue." That's the title of their article dealing with the recent ARRL sponsored Field Day and the way in which radio amateurs demonstrated their ability to provide emergency communications in time of disasters and other communications outages.

In addition to Field Day, the article also touches on the volunteerism found in both the Amateur Radio Emergency Service and the Military

Affiliated Radio System. It also notes that ham radio uses many modes of operation to relay information including both analog and digital voice and data services that even includes e-mail. It also talks about groups of hams who are setting back-up communications for hospitals that takes over when telephone systems fail.

Admittedly the article is not a hundred percent technically accurate from a ham radio point of view. That said, it does provide the non-amateur general public to which it is targeted with a very positive view of the hobby and the services it can provide to the community, the nation and the world. You can read it on-line www.pcworld.com/article/148040/when_networks_fail_hams_to_the_rescue.html (PC World)

**

RESTRUCTURING: CW USE ON THE RISE IN SOTA AWARD PROGRAM

CW seems to be increasing in polarity in the amateur radio world, and this is certainly reflected in the U-K sponsored Summits on the Air or SOTA award program. According to the Southgate News the majority of all activation's are undertaken using CW. Southgate says that this increasing trend is no doubt compounded by the addition of new overseas associations, where there is much more of a CW culture in portable operating.

While SOTA operations in the U-K have a greater bias towards voice modes such as SSB and FM, the CW bug is also biting. This, with several participants making the decision to revive their Morse after a long absence or even learn it from scratch specifically for use in the Summits on the Air program. (Southgate, RSGB)

**

ENFORCEMENT: CHP ASKS HELP IN STOPPING COPPER THIEVES

A possible new use for your cellphone or autopatch in the great American South-West. This as the California Highway Patrol seeks public assistance in reporting suspicious activity that may lead to thieves who are stealing copper wiring from lighting along that states freeways. Newsline's Fred Vobbe, W8HDU, reports:

--

According to a CHP spokesperson, wiring theft is hitting freeways on the average of once a week. Especially hard hot have been Los Angeles, Riverside and San Bernardino counties. CHP Officer Jennifer Hink says that the thieves are creating a real danger for people stranded in the dark on the shoulders of these roads.

Unlike a year ago when these thefts were still random, Hink says that the thieves these days are apparently skilled in the activity. She says that they know what they're doing and are using the right tools.

The thefts are the result of recyclers paying $3 a pound for the wiring, five times the 60 cents a pound five years ago. Authorities are reportedly working with recyclers but say that spotting stolen wiring can be difficult.

The CHP asks that any member of the public that sees suspicious activity was asked to call 911.

I'm Fred Vobbe, W8HDU.

--

As this is really a world wide problem it might be wise to keep your eyes open and your radio at hand no matter where you live. (Published reports)

**

HAM HAPPENINGS: ARRL AUDIO NEWS TELEPHONE SERVICE RESTORED

The ARRL says that telephone access to its Audio News ha been restored. The League says that it had been down for a few days due to equipment failure, but was still available as an MP3 audio file at the ARRL's website. Its also now back via telephone at 860-594-0384 once again. (ARRL)

**

HAM HAPPENINGS: NORCAL 432 NET MOVES TO SUNDAY AT 7 PM

K6NC reports over the VHF Reflector that the famed Northern California 432 Net has been moved to Sunday night. The start time 7:00 PM Pacific time with the Net Control station taking early check-ins at 6:45. The frequency remains 432.100 MHz. With good conditions, the net has had check-ins from Oregon on the north, Western Nevada to the east, and Southern California to the south. (K6NC)

**

NAMES IN THE NEWS: STEVIE WONDER GOES TO HEIL SOUND MICS

Famed musician and performer Stevie Wonder now has a kind of remote connection to ham radio. No, the superstar has not joined the ranks of the hobby, but he is now using microphones manufactured by one of the amateur radios most recognized names.

Yep, you guessed it. Stevie Wonder is now using Heil Sound microphones on stage. Specifically the Heil PR 22, 30, 35 and 40. The same mics designed by ham radios own Mr. Audio, Bob Heil, K9EID, that many of you are using in your hamshacks.

Stevie Wonder's first appearance using Heil Sound microphones was a major event. It was in concert at the Hollywood Bowl in California, on Monday evening July 7th. A concert that Los Angeles Times called a masterful turn from one of the greatest musicians to ever grace the venerable venue.

In a note to Newsline, Bob Heil, simply said that he is very honored to have all of this happen. (ARNewsline(tm))

**

RADIO ON SCREEN: 2 METERS IN THE GET SMART MOVIE

Ham radio has gotten smart. Well more like its gotten smart in the new hit movie Get Smart which in itself is a big screen sequel to the small screen hit TV show of the 1960's.

CQ Magazine editor Rich Moseson, W2VU., went to see the new flick. He says that someone was able to sneak a bit of ham radio into the "Get Smart" movie and we are not talking about some hams H-T going off in the theater.

Without giving anything away, Rich says that at one point the central character Maxwell Smart commandeers a car from another agent,. There under the dash, is a 2-meter rig, tuned to 146.91 MHz. We see it twice, since the agent he took the car from calls him on the radio and the camera flashes back to the rig.

W2VU says that if you go to see the Get Smart movie, watch for this bit of big screen ham radio. We say its -- well -- very smart indeed. (W2VU)

**

THE SOCIAL SCENE: GERMANY'S HAM RADIO 2008

Europe's recent Ham Radio Convention brought 17,100 visitors, 180 exhibitors and societies from over 30 nations to Friedrichshafen., Germany, the last weekend in June. Yes the convention is simply named Ham Radio and its sometimes called the Dayton Hamvention of the Continent. Film maker Dave Bell, W6AQ, went there for the first time this year. He says its really a lot more:

--

Bell: "In Germany its all under roof. There are three or four buildings that are all tied together. And it doesn't matter what the weather is like outside because everybody is inside. And, its about the same size as Dayton and all of the manufacturers that we are familiar with plus a few others are there."

--

Also there this year were some 95 youngsters. They participated in a special Ham Rallye, aimed at introducing them to the hobby. Also, over 100 teachers were present at the special training course held for them.

Video of this years show has been posted by several hams on the YouTube dot com video sharing website. Just use the YouTube search feature with the words Ham Radio Germany 2008. (ARNewsline(tm), W6AQ)

**

THE SOCIAL SCENE: W1AW FROM THE ARCTIC CIRCLE

A very special, special events station will be on the air from Alaska's Arctic Circle from July 26th though August 10th. This, as W1AW portable KL7 takes to the air from truly rare Grid Square BP56 as part of the 2008 Alaska State Hamfest being held in Anchorage.

The station will operate on the Alaskan Arctic Circle from the intersection of the Dalton Highway some 200 miles North of Fairbanks. Listen out for this all band 24hour operation each day. The enhanced Gray-Line effect starts at about 06:00 UTC and lasts for 6 to 8 hours.

The main 2008 Alaska ARRL Convention will run from August 1st to August 4th 2008. In addition to the usual convention faire this year the planners have included attractions like cruses, Halibut fishing and a tour of the HAARP 3.6 Mega-watt transmitter site both before and after the main convention weekend.

More information on W1AW portable KL7 and the Alaska ARRL Convention is on-line at www.akhamfest.com. (KL7BB)

EMERGING TECHNOLOGY: RFID TAGS VS. HOSPITAL ELECTRONICS

Medical monitoring equipment in hospitals could be interfered with by micro-power tracking devices called R-F Identification Tags. This, according to scientists in the Netherlands. Jim Damron, N8TMW, has the rest of the story:

--

Radio frequency identification devices better known as RFID tags are on the rise in healthcare. Among other things they are being used to help track patients and reveal the location of equipment.

But the latest research, conducted at Vrije University in Amsterdam, shows a problem. There scientists tested the effect of holding both passive and powered RFID tags close to 41 medical devices, including ventilators, syringe pumps, dialysis machines and pacemakers. A total of 123 tests, three on each machine, were carried out. Some 34 produced an incident in which the RFID appeared to have an effect on hospital gear. Of these, 24 were deemed either "significant" or "hazardous".

In some tests, RFID's either switched off or changed the settings on mechanical ventilators, completely stopped the working of syringe pumps, caused external pacemakers to malfunction, and halted dialysis machines.

The device did not have to be held right up to the machine to make this happen - some "hazardous" incidents happened when the RFID was more than 10 inches away.

For the Amateur Radio Newsline, I'm Jim Damron, N8TMW, reporting.

--

You can read the full story at the link provided in this weeks printed Newsline report.

(DO NOT READ: You can read the full story at http://news.bbc.co.uk/1/hi/health/7471008.st (BBC, southgate)

**

EMERGING TECHNOLOGY: ROADRUNNER IS NEWEST SUPERCOMPUTER

The Los Alamos National Lab and IBM have introduced the world's latest fastest computer. Called Roadrunner, the $100 million machine that can perform 1,000 trillion calculations per second.

Built primarily for nuclear weapons work, the computer named Roadrunner, is twice as fast as IBM Blue Gene system at the Lawrence Livermore National Lab, which itself is three times as fast as any of the world's other supercomputers. To explain how powerful it is, if everyone of the six billion people on earth used a handheld computer and worked 24-hours a day it would take them 46 years to do what Roadrunner can do in a single day.

(Shoptalk)

**

HAM RADIO IN SPACE: P3E ORBITAL AND P5E MARS MISSION UPDATES

Heres the latest on the new Phase 3 E ham radio satellite now under construction. It was reported at the 2008 AMSAT Germany Symposium that the mechanical work on the satellite has been completed but it does not yet have the Internal Housekeeping Unit or I-H-U. There has been good progress on the transponder payloads with the 435 to 145 MHz software defined linear transponder being demonstrated at HAM RADIO 2008 in Friedrichshafen, Germany.

Once completed, the satellite will need a ride into Earth orbit. Right now it appears that the cost quoted by Arianespace for the launch of Phase 3 E is outside the budget of AMSAT Germany. However, AMSAT France has offered its support in any further negotiations. The possibility of using launch sites operated by India, Russia or Japan is being investigated.

P3E is closely linked to the Phase 5 E Mars Orbiter spacecraft also being built by the Radio Amateurs at AMSAT Germany. Phase 5 E will be the first private venture spacecraft to go to Mars and will use the 2.4 GHz and 10 GHz Amateur Satellite Service frequency allocations.

**

WORLDBEAT - UK: MORSE IS NOR DEAD AS THE TIMES OF LONDON SAYS IT WAS

Turning to news from around the globe, Morse code is not dead, but try to tell that to the Times of London newspaper. Well, one ham did and the

paper listened. Heres the story.

On Tuesday, July 1st, the Times published an article misleadingly claiming Morse code was deceased. The article titled "SOS, RIP" on inaccurately claimed that Morse code had died along with the SOS.

Knowing that was not the case, Tony Usher, G4HZW, wrote to the editor pointing out the error and his letter was published in the Thursday July 3rd edition. The Times article "SOS, RIP" July 1st can be seen at
http://www.timesonline.co.uk/tol/comment/leading_article/article4244645.ece
The letter in response from Tony Usher G4HZW published July 3rd is at
http://www.timesonline.co.uk/tol/comment/letters/article4257377.ece
(Southgate)

**
WORLDBEAT - NETHERLANDS: THE OMROEP ZENDER TRANSMITTER MUSEUM

Popular Communications reports in its July issue that a group of former employees of Holland's Nozema Services has set up a news historic radio website called the on-line Omroep Zender Museum.

Omroep Zender is Dutch for The Broadcast Transmitter Museum. Among the many things published there are photos of Dutch broadcast facilities dating back to 1935. The site also offers some audio, including the final moments of Radio Netherlands shortwave transmissions in English and Dutch from its famed Flevoland site.

A search engine has just been added to the site, though at the moment it is only in Dutch. Nozema Services used to be responsible for the technical distribution of radio signals in the Netherlands.

**

WORLDBEAT - PORTUGAL: NEW 4 METER BEACON ON YTHE AIR
A new 4 meter beacon is on the air from Portugal. CS5BFM operates on 70.166 MHz from Maidenhead grid square IM 59 r d near Serra das Fazendas de Almeirim at an altitude of 12 meters. Power output is 10 watts into a dipole antenna beaming 45 degrees and 225 degrees. If you hear it please e-mail a signal report to geral at ct1arr dot org.
**

ON THE AIR: PORTUGUESE NAVY RAC JULY 26 - 27

To commemorate their 6th anniversary the Portuguese Navy Radio Amateur Club will be operating the special event station CS8DFG. This, on July 26th and 27th from the frigate 'D. Fernando II e Gli¿½ria' from 0800 UTC to 1900z UTC. CS8DFG will be active on or near 3.512, 7.012 and 14.012 MHz for CW and 3.690, 7.060 and 14.180 MHz for SSB. On both days operations will be interrupted from 1130 to 1300 UTC. Full information and QSL routing is available at www.nra.pt/php/bdDFG.php?lang=en&cY=&uLog&mID= (Portugese Navy Radio Amateur Club)

**

OTHE AIR: DXPEDITION TO CHUGINADAK ISLAND

Members of the Russian Robinson Club will mount a DXpexpedition to Chuginadak Island from July 21st to the 27th. This is a parcel of land located 800 nautical miles South of Anchorage, Alaska,.

The four member expedition team will fly to Dutch Harbor Alaska on July 17th. They will then sail to Chuginadak Island and setup a camp and get on the air using the call sign KL7DX. Operations will continue for one week weather permitting.

The operation is reported to be privately funded with donations from team members, manufacturers of communications equipment and INDIVIDUAL amateur radio operators worldwide. QSL via Ron Lago, AC7DX, PO Box 25426, Eugene, Oregon, 97402. More is on-line at www.na-234.com. (Russian Robinson Club)

**

DX

In D-X, word that IARU Vice President VE6SH will be active through Juluy 20th from the Maldives as 8Q7TM. His activity will include the July 12th to the 13th IARU HF World Championship. QSL via VE6SH.

And VE2008VQ is active until the 27th of July. This, in celebration of the 400th anniversary of the foundation of Canada's Quebec City. Activity is on 80 through 6 meters. QSL via VE2AWR.

Also, G3RWF, is on the air as 5X1NH from Fort Portal in Western Uganda. He will be there until 15th August. QSL via G3RWF.

Lastly, TS1ASC is active until July 22nd during the 28th Arab Scout Jamboree and the Cub Scouts Mediterranean Camp. QSL via each operators instructions as given on the air.

(Above from various DX news sources)

**

THAT FINAL ITEM: DXING FROM A BAR

If you're tired of DX expeditions from remote locations, islands on the air, lighthouses and other classic type DX operations, this one is for you. Call it bar DX'ing. And we mean bar as in a place that serves alcoholic beverages, among other things. John WilliamsVK5BUI, has the inebriating details:

--

Be ready for the second radio activity at Cahroi Bar, in Portugal, with the singular call sign CT8CAR on this edition.

The first endeavor took place last August 2007, when a group of friends, committed to ham radio, activated this kind of gastro-pub in Sintra Portugal, with the special call sign CT6CAR. Such event was so successful that now, the same group, will back on radio from there, among

good regional excellent meals and beverage.

The special event station will be on the air during July 19 and 20, 2008. The Cahroi Bar is a familiar establishment, placed on a hot spot for radio communications, serving lunches and dinners at the table, including a good wine
and nice fresh local food that can rival a good restaurant's.

I wonder if they charge corkage for any "home brewing" or if "Ham" sandwiches are on the menu?

With some help from radio wave's propagation this special call sign will be easily reached at every amateur band on several modes.

The beacon will sign it up in the APRS system as well as at Google Earth. Both will give you the geographical coordinates of the location.

And so far no truth to the rumor they are planning a contest station with multipliers for guessing the last standing operator!

Oh and as a disclaimer... drink responsibly!

This is VK5BUI..

--

Or as we say here in the United States, never drink and dive. Mixing Alcohol and gasoline can lead to serious consequences in court, or worse. (WIA News)

**

NEWSCAST CLOSE

==> SACRAMENTO VALLEY AREA HAMS RESPOND WHEN FIRES SWEEP ACROSS NORTHERN
CALIFORNIA

With the California fires showing little signs of abating, ARRL
Sacramento Valley Section Manager Ron Murdock, W6KJ, says that ARES
members in his Section are actively involved in supporting the agencies
they serve. According to California Department of Forestry and Fire
Protection (CAL FIRE), more than 330 fires covering almost 200,000 acres
are active in the Sacramento Valley Section. While most fires are at
least 50 percent contained, some are less than 30 percent under control.
```

According to Murdock, too little rainfall over the winter and hot, dry winds contributed to the fires' fast spread. Due to the weather conditions, ARRL Sacramento Valley Section Emergency Coordinator Richard Cloyd, WO6P, put ARES leadership on a standby alert in early June. "On June 11, a fire started that eventually consumed 24,000 acres," said Murdock. This fire, called the Humboldt Fire, burned for almost one week. "At mid-June, our wildlands -- so full of tinder dry fuel -- began to burn. Fire threatened the City of Paradise in Butte County for several days. Paradise doesn't have many evacuation routes, so when people returned to their homes, they had a new appreciation for evacuation plans." According to CAL FIRE Public Information Officer Mary Ann Aldrich, no cause has been determined for this fire which destroyed 74 residences and damaged 20.

The high winds soon dissipated, but then dry thunderstorms -- storms with very little rain but lots of lightning strikes -- made their way to the area. "First we heard of over 400, then 800, then over 1000 wildland fires. People in other mountain communities were advised, and then directed, to evacuate their homes and seek shelters set up by the Red Cross," Murdock said.

With activation requests from both the Paradise Emergency Operations Center and the American Red Cross, Butte County Emergency Coordinator Steve Kaps, N6NPN, opened the ARES net on the Golden Empire ARS W6RHC Repeater. Murdock said that it was opened first as a precautionary measure, but as the shelters opened, help was needed. Paradise residents Chuck Orgovan, KF6YKQ, and Anna Horn, KG6ZOA, manned the shelter at a local school. "The W6RHC repeater did not have good coverage in the shelter area, so we relayed communications between the shelter and Kaps (who was running the Net Control Station) via the Sutter County WD6AXM repeater and we were able to make things work. Placing a better antenna at the shelter seemed to help for a while, but eventually operations shifted entirely to the WD6AXM repeater," Murdock said.

Cloyd relayed information to Murdock that shelters in other parts of the area were being opened: "I told Red Cross in Yuba City. They realized they did not know where and when these other shelters were opening. We then opened KG6WGQ -- the club station at the Three Rivers Chapter of the American Red Cross in Yuba City -- so that we had a better chance of communicating with the multiple outlying shelters. Since the station was to be open when the ARC response group was operating, we had to work in shifts, so we went to three 5 hour shifts per day for a week. At one point, Ken Miller, KF6JRE, volunteered to take a shift in Yuba City from his home in West Sacramento."

A radio and power supply at KG6WGQ had to be replaced; luckily, Herb Puckett, W6HBU, had an extra one in his go-kit. Paul Johnson, N6XVL, developed a list of volunteers to staff all the shifts for the Red Cross operation. "We were in the process of scheduling relief for Butte County operators on the evening of June 27, when the Red Cross decided to move from Yuba City to Chico to better use the resources they had in place," Murdock said. "At that point, further Net operation by ARES was not

needed and so it was suspended for the weekend." On Monday morning June 30, fire suppression efforts were making headway and most of the sheltered population was allowed to return home.

On Sunday, June 29, Yuba/Sutter Emergency Coordinator Art Craigmill, K6ALC, heard a fire call on his scanner. "The location was nearby so he gathered his equipment and went to check on the situation," Murdock said. "On his way there, he saw another fire -- this one at a home construction site -- and notified the incident commander." Craigmill took action to stop the spread of this new fire. "Thankfully, the home had water pressure, and this aided Art in his firefighting efforts until the engine company arrived to put it out."

Throughout the Sacramento Valley Section and beyond, smoke from wild fires dangerously contaminated the air with particulate matter. "The air stank of smoke and things burned. With air quality values as bad as we have seen them in 25 years, many clubs in the section had to cancel their Field Day operations," Murdock said. "First to do so was the Nevada County Amateur Radio Club. Not only did they not get to do Field Day, but their site -- the Nevada County Fairgrounds -- was used as a fire fighting staging area." The Golden Empire Amateur Radio Society in Chico and the Yuba-Sutter Amateur Radio Club also cancelled their respective Field Day operations, due to poor air quality. Murdock said that both clubs had many members who manned ARES shifts during this emergency.

The Oroville Amateur Radio Society had many operators involved in the shelter operation. Bill Cross, K6DYT, volunteered as an animal shelter worker. Virginia Paschke, KI6COL, deployed to Butte County from her home in Sutter County, also helped out at the animal shelter. According to Murdock, Paschke got her Amateur Radio license last year for this very reason: The domestic animal rescue group provides assurance for people who need to evacuate that they can do so without leaving their pets behind. It speeds the evacuation process and keeps people from getting into more dangerous situations.

CAL FIRE's Aldrich said that this fire complex originally had many fires: "We started with 38, but 15 of the fires merged together so now we are down to 11 fires covering 27,600 acres." She said that lightning caused these fires. Two residences have been destroyed so far by fires in this cluster.

Murdock said that many of the clubs that held a Field Day event could see a slight clearing of the thick smoke that plagued more northern locations: "It serves as a reminder that fires remain burning and that we should all remain ready for the next phase of this emergency."

==> ARRL TEACHERS INSTITUTES NEAR HALFWAY POINT FOR 2008

The first rounds of Teachers Institutes <http://www.arrl.org/FandES/tbp/ti.html> for this summer have been completed at the Parallax facility in Rocklin, California and at Pueblo

Magnet High School in Tucson, Arizona. According to Mark Spencer, WA8SME, who coordinates the Education and Technology Program, there were a few specific goals and objectives that were tried during these two Teachers Institutes that were beyond the normal training curriculum: the new 24-hour clock kit for the Soldering 101 unit, the radio telescope unit and the BOT instructor's board.

These first Teachers Institutes had another first: a new instructor. "All of the technical things worked out well," said Spencer, "and new instructor Miguel Enriquez, KD7RPP, did a great job during his first Teachers Institutes as the lead instructor. He will be a much needed and welcome addition to the team."

Spencer said that 25 participating teachers from nine states attended these two Teachers Institutes. These teachers represented four elementary schools, 10 middle schools, 10 high schools and one university. Of the 25, 14 were hams and 11 were non-hams. "This number will shift because a number of non-ham participants are planning to, or will be taking their ham license examinations in the near future," Spencer said.

Here are a few comments taken from what participants had to say about their experience at the ARRL Teachers Institute:

* In the 34 years I've been teaching, I'd place this workshop as one of the top two (the other being a really cool National Science Foundation program in chemistry education at University of Oregon) that I've been to. [The Teachers Institute] has inspired me to incorporate new material in some of my classes. It has inspired me to broaden my own interests.

* Thanks again for ARRL support in the education gift department -- I have new ideas on how to excite the kids as I go through the next year.

* Thanks for making a successful Institute experience for myself. You are an excellent instructor. I hope the ARRL knows what they have in you. Miguel was terrific also. Since I have come back [to my school], I have two teachers who have expressed interest in attending one. I am sure there will be several high school teachers in my district who certainly would be interested in attending one. We have about 10 high schools in the district and the TI is the institute for all of them.

* I appreciate all you've done for me through the Teachers Institute. It has been a great learning process for me so far! I can't wait to share this new knowledge with my students.

The next Teachers Institute is in Dayton, Ohio and is sponsored by the Dayton Amateur Radio Association (DARA). The Teachers Institute season will wrap up with two sessions in Newington at ARRL HQ during the first week in August. Another instructor, Nathan McCray, K9CPO, will join Spencer in Newington. The Teachers Institutes are just one part of the ARRL Education and Technology Program, also known as "The Big Project." For more information on this exciting program, please visit the ETP Web site <http://www.arrl.org/FandES/tbp/>.

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- Don Christensen, W8WOJ, of Midland, Michigan, asks: I am not a frequent user of 2 meters yet; however, I do want to be available for emergency activity. I have a 2 meter handheld transceiver at the ready, but wonder what the preferred procedure is to ensure that my transceiver's nickel-cadmium (NiCd) batteries are charged and ready for service.

The Doctor answers -- Unfortunately, NiCds might not be the best choice for such an application with intermittent use.

If you run down a NiCd battery pack too low, any strong cells may reverse charge the weaker cells, damaging the weak cells. On the other hand they also don't like being constantly topped off without actual hard use -- this promotes crystal formation, which can short out the cells. They are most happy in applications in which they are used until they discharge significantly, but not all the way and then are just charged until fully recharged. Thus, the idea of having a spare pack that is just kept charged up, but never actually used, is not a good plan.

If you have two packs, they will both last longer if one is used until it runs down and then you switch to the other and promptly recharge the depleted one. Perhaps you can have the radio turned on a few days a week monitoring the local repeater.

Many handheld radios offer battery cases for non-rechargeable Alkaline cells that can be used in place of the rechargeable battery. These are a good choice since they have long shelf life, generally have a longer operating life than a charge with similar sized NiCds, and are usable in field situations in which charging sources are not available.

Another choice, if you must have a rechargeable battery, is to use sealed lead acid or gel cell batteries -- they love to be kept on a float charge until needed, but are bulky and require a separate cable to the handheld.

Be sure to read "The Doctor Is IN" every month in QST, the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> THE JULY/AUGUST QEX IS HERE

The July/August issue of QEX is out, and it is full of theoretical and practical technical articles that you don't want to miss.

In this issue, John Post, KA5GSQ, describes a crystal controlled 145 MHz oscillator in "VHF Frequency Multiplication Using the SA602 IC." Wes Hayward, W7ZOI, returns to the pages of QEX with an article about

"Oscillator Noise Evaluation with a Crystal Notch Filter." James Koehler, VE5FP, shares "Some Thoughts on Crystal Parameter Measurements" as he describes an automated system he built using a new DDS signal generator and microcontroller circuit to make the measurements and perform calculations.

Al Christman, K3LC, expands on the investigations in his July/August 2005 QEX article with "Ground System Configurations for Phased Vertical Arrays." Contributing Editor L.B. Cebik, W4RNL (SK), looks at the characteristics of one wavelength loops in "Antenna Options," and Ulrich Rohde, N1UL, takes us on a tour of early RF oscillators in "From Spark Generators to Modern VHF/UHF/SHF Voltage Controlled Oscillators."

Would you like to write for QEX? It pays $50 per printed page. Be sure to check out the Authors Guide <http://www.arrl.org/qex/#aguide> for more information. If you prefer postal mail, please send a business-size self-addressed, stamped envelope to QEX Authors Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B, and is published six times a year. The subscription rate for ARRL members in the US is $24. For First Class US delivery, the rate is $37 for members, $49 for nonmembers. For international delivery via air mail, including Canada, the subscription rate is $31 for members, $43 for nonmembers. Subscribe to QEX today <http://www.arrl.org/qex>.

==> KANSAS TEEN NAMED 2008 YOUNG HAM OF THE YEAR

Emily Stewart, KC0PTL, a 17 year old from Leavenworth, Kansas, has been named the 2008 Young Ham of the Year (YHOTY), announced YHOTY Award Administrator Bill Pasternak, WA6ITF. Emily was selected based on her commitment to Amateur Radio, along with leadership, outreach, and her technical and public service achievements of the Amateur Radio Service to others. She will receive her award as part of the Huntsville Hamfest. More than two dozen young people were nominated for this award, now in its 22nd year.

The daughter of Mike, K0MDS, and Sharon Stewart, Emily was first licensed in August of 2003 when she was 12; she holds a General class license. She said she was "so excited" when she got her ticket that she wanted to share Amateur Radio and made presentations while in middle school about ham radio. That led to getting active in her local radio club and contributing articles to the club newsletter. Through her local activities, Emily was appointed in 2006 as the first Assistant Section Manager for Youth in the ARRL Kansas Section.

Emily has lived in Kansas for eight years. Prior to that, home was in Germany, where her father was serving in the US military. She credits her dad for sparking interest in Amateur Radio when they moved back to the United States: "I thought it was really cool when he started talking to people overseas in Europe. And Germany was still kind of home to me, so when he started talking to people in Germany, I said I wanted to do

that, too."

Last August, while attending the ARRL Kansas State Convention, Emily conducted a survey of attendees, asking how many had persuaded their children or grandchildren to get involved in Amateur Radio. The slim response led her and Brian Short, KC0BS, to develop the Kansas Legacy Project. This project has three prongs: Pass the spirit and knowledge of the Amateur Radio Service to a new generation; build ties between family members using ham radio activities, and increase youth participation in ham radio. Through her efforts, Emily hopes to encourage hams to get the younger members of their families to get their ham licenses and get involved. The project has netted good results so far, including one of the youngest hams in the region to be licensed -- 7 year old Lucie Goodhart, KD0DMO, who took a license class with her dad and passed her Technician test last March.

Emily is also interested in the public service and storm spotting portion of Amateur Radio: "My dad would sometimes take me out with him to go storm spotting. I decided that I wanted to have some training, so I took a couple of online courses in emergency communications. I will either go out with my dad when we get called out to do some storm chasing or I will stay at home and do spotting from home -- just in case something really nasty does happen. Then that way I'm home with my mom."

Emily also has a deep interest in spaceflight and astronomy. One of her cousins, US Astronaut Robert L. Stewart, was a crewmember onboard the space shuttles Challenger and Atlantis. She has been attending Spacecamp since she was in the 6th grade. "I'm also into astronomy and that's another thing my dad and I do," said Emily. "We volunteer at an observatory about an hour away from Leavenworth. We work on public access nights."

This fall, Emily heads into her senior year at Leavenworth High School where she is a member of the National Honor Society, Vice President of the Fellowship of Christian Athletes and is a copy editor for the school yearbook. Already a Registered Pharmacy Technician with the state of Kansas, she is considering making pharmacy her career.

Emily is a member of the ARRL and the Kickapoo QRP Amateur Radio Club. She's also a regular participant in Field Day, Kids Days and QRP events.

The 2008 Amateur Radio Newsline! Young Ham of the Year Award will be presented on Saturday, August 16, 2008 at the Huntsville Hamfest in Huntsville, Alabama. As the 2008 Young Ham of the Year, Emily will receive a trip to the Huntsville Hamfest, ham radio equipment, various books and magazines and an all-expense-paid week at Spacecamp in Huntsville. Amateur Radio Newsline will award her with a commemorative plaque at the ceremony.

The presentation of the YHOTY award is a regular feature of the Huntsville Hamfest and has been made possible through the generosity and kindness of the event's Planning Committee. This year's YHOTY award

ceremony will be hosted by Don Wilbanks, AE5DW, of Amateur Radio Newsline, along with representatives of corporate underwriters Vertex-Standard and CQ Communications, Inc.

The Amateur Radio Newsline "Young Ham of the Year" award program (formerly the Westlink Report Young Ham of the Year Award), has been presented annually since 1986 to a licensed radio Amateur Radio operator who is 18 years of age or younger and who has provided outstanding service to the nation, his/her community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

==> TWO NEW COORDINATORS APPOINTED IN IARU REGION 2

IARU Region 2 President Reinaldo Leandro, YV5AMH, has appointed Dr Cesar Pio Santos A., HR2P, of San Pedro Sula, Honduras, as IARU Region 2 Emergency Communications Coordinator; Santos will be taking over from Rick Palm, K1CE. According to Leandro, Santos is a well-known emergency expert in the region who helped to provide emergency communications and medical relief in Honduras in the wake of Hurricane Mitch. He remains active as a volunteer in his country's governmental emergency communications institution and as a member of the Emergency Communications Advisory Group (ECAG) for Area D (Central America) in IARU Region 2.

Leandro also appointed Juan Munoz, TG9AJR, of Puerta Parada, Guatemala, to succeed Bill Zellers, WA4FKI (SK) as the Region 2 Monitoring System Coordinator. Munoz started as a shortwave listener in 1984 and obtained his current license in 1989. Leandro said he is an active amateur on nearly all bands and modes. As an avid contester, Munoz was a referee during WRTC 2002 in Helsinki, Finland and has participated in the IARU Monitoring System with Martin Potter, VE3OAT, since 2001.

==>SOLAR UPDATE

Tad "The Sun bursts through in unlooked-for directions" Cook, K7RA, this week reports: Another week and still no sunspots. The 3-month moving average for daily sunspot numbers that we began reporting toward the end of Solar Cycle 23 seemed to retrospectively suggest that solar minimum occurred last fall. The daily average for the 3-month period centered on last October was nearly 3 -- or 2.967 to split some hairs. This is an average of the 91 daily sunspot numbers from September 1-November 30. Following that low, November was 6.85; from December 2007-April 2008, the 3-month average drifted from 8.14-8.89. With remaining Solar Cycle 23 spots becoming increasingly rare -- and barely any Solar Cycle 24 spots -- this suggested solar activity was stalling out. Then, at the end of June, a further decline when the 3-month average centered on May dropped to 5.04. Sunspot numbers for July 3-9 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.5, 65.4, 65.1, 66.1, 65.5, 65.5 and 66 with a mean of 65.6. Estimated planetary A indices were 4, 4, 7, 4, 3, 2 and 4 with a mean of 7. Estimated mid-latitude A indices were 3, 3, 7, 5, 2, 1 and 3 with a mean of 3.4. For more information concerning radio propagation, visit the ARRL Technical Information

Service Propagation page
<http://www.arrl.org/tis/info/propagation.html>. To read this week's
Solar Report in its entirety, check out the W1AW Propagation Bulletin
page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder is
July 11 and the FISTS Summer Sprint is July 12. The IARU HF World
Championship is July 12-13. The SKCC Weekend Sprintathon and the ARCI
Summer Homebrew Sprint are July 13. The RSGB 80 Meter Club Championship
(SSB) is July 16 and the NAQCC Straight Key/Bug Sprint is July 17. Next
weekend is the NCCC Sprint Ladder on July 18. The Feld Hell Sprint and
the VK/Trans-Tasman 160 Meter Contest (CW) are July 19. Look for the DMC
RTTY Contest, the North American QSO Party (RTTY) and the CQ Worldwide
VHF Contest on July 19-20. On July 20, check out the RSGB Low Power
Field Day and the CQC Great Colorado Gold Rush. The Run for the Bacon
QRP Contest is July 21, the SKCC Sprint is July 23 and the RSGB 80 Meter
Club Championship (Data) is July 24. All dates, unless otherwise stated,
are UTC. See the ARRL Contest Branch page
<http://www.arrl.org/contests/>, the ARRL Contest Update
<http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar
<http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains
open through Sunday, July 20, 2008 for these online course sessions
beginning on Friday, August 1, 2008: Technician License Course (EC-010),
Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency
Interference (EC-006), Antenna Design and Construction (EC-009), Analog
Electronics (EC-012) and Digital Electronics (EC-013). Each online
course has been developed in segments -- learning units with objectives,
informative text, student activities and quizzes. Courses are
interactive, and some include direct communications with a
Mentor/Instructor. Students register for a particular session that may
be 8, 12 or 16 weeks (depending on the course) and they may access the
course at any time of day during the course period, completing lessons
and activities at times convenient for their personal schedule. Mentors
assist students by answering questions, reviewing assignments and
activities, as well as providing helpful feedback. Interaction with
mentors is conducted through e-mail; there is no appointed time the
student must be present -- allowing complete flexibility for the student
to work when and where it is convenient. To learn more, visit the CCE
Course Listing page <http://www.arrl.org/cce/courses.html> or contact
the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News July 25: There will be no ARRL Audio News on
Friday, July 25. The ARRL Letter will be available that day. ARRL Audio
News will return on Friday, August 1.

* International Space Station Goes Live with ARISS: July looks to be a busy month for Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss/oindex.htm>. On Friday, July 4, members of the Austin Amateur Radio Club (AARC) facilitated a successful ARISS contact between the International Space Station (ISS) and Cub Scout Pack #304 and Blackland Prairie Elementary School in Round Rock, Texas. Before an audience of 100, 10 Cub Scouts asked nearly 20 questions of Greg Chamitoff, KD5PKZ. Chamitoff launched into space on May 31 on the space shuttle Discovery and took over on the ISS for Garrett Reisman, KE5HAE. Chamitoff is scheduled to return to Earth in November. An ARISS contact took place with the National Agriculture Museum in Ottawa, Ontario, Canada on Wednesday, July 9. Telebridge station W6SRJ in Santa Rosa, California assisted with the contact. The museum is a large research facility in the City of Ottawa covering more than 1000 years of major contributions to agricultural progress. A public camp is part of the overall operation of the farm. Another ARISS contact has been scheduled with the Department of Astronomy and Space Sciences (DASS) at the Kuwait Science Club in Safat, Kuwait on Monday, July 14 at 17:05 UTC. Telebridge station WH6PN in Hawaii will assist with the contact. DASS aims to spread scientific awareness in the fields of astronomy and space sciences by actively engaging the public in exploring the cosmos. This educational activity will educate young people about space stations, satellites and ham radio. To date, there have been 352 ARISS contacts. If a school in your area is interested in participating in an ARISS contact, please visit the ARISS Web page for more information on how to apply <http://www.rac.ca/ariss/ARISSapp16_Instructions.htm>.

* Fun at W1AW for Field Day 2008: Another Field Day has come and gone, and just like amateurs all over the country, those who activated W1AW not only took part, but had lots of fun during the 24 hour event. According to W1AW Station Manager Joe Carcia, NJ1Q, W1AW made 1079 contacts using CW, SSB and RTTY on 160-2 meters. "The last time W1AW broke the 1000+ QSO mark on Field Day was back in 2005 when 1100 QSOs were made. But band conditions were slightly better then and we had more operators on hand," Carcia said. Along with Carcia, ARRL Contest Branch Manager Sean Kutzko, KX9X; DXCC Manager Bill Moore, NC1L; DXCC Assistant Carol Michaud, KB1QAW, and Membership Manager Katie Breen, W1KRB, put W1AW on the air for Field Day. Michaud's 9 year old daughter Lexie got her first taste of ham radio, getting over a case of "mic fright" to get on the air, too. This was Kutzko's first Field Day at W1AW. "Field Day is always fun," he said, "but to be a part of W1AW during the ARRL's biggest on-air event was a real honor. The mixture of experienced and newly licensed operators sharing the fun and working hundreds of stations is the essence of Elmering in Amateur Radio." Field Day is always the fourth full weekend in June. In 2009, it will be June 28-29.

* IARU Member Societies On-The-Air for IARU HF World Championship: In this weekend's IARU HF World Championship Contest, IARU Member Societies from all around the globe will be active and operating with special call signs <http://www.iaru.org/contest.html>. According to ARRL Contest Branch Manager Sean Kutzko, KX9X, many of these call signs end in HQ, designating a national headquarters station; these can be worked as

special multipliers in the contest. Kutzko said that IARU Administrative Council members will also be on and can also be worked for special multiplier credit. If you hear a station giving R1, R2, R3 or AC as their contest exchange, that station represents part of the IARU Administrative Council or regional Executive Committee. "The Daily DX," edited by Bernie McClenny, W3UR <http://www.dailydx.com>, has compiled a chart listing all of the known IARU Member Society call signs that will be on-the-air for the contest; this listing is also available on the ARRL Web site <http://www.arrl.org/news/10203>. The IARU HF World Championship runs from 1200 UTC Saturday, July 12 to 1200 UTC Sunday, July 13.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all

automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

Message-ID: <de6c3a44-8a85-46e3-9e15-71a7d8525c1d@c65g2000hsa.googlegroups.com>
Source record: 2662

My oh My,

I just had my first introduction to CW contesting during field day. I sat and watched a CW operator rack up QSO after QSO at 25 wpm and I was very impressed. Man, I wanted to do that! I left field day with a renewed interest in CW thinking that I might try and brush off the dust and cobwebs from my CW skills and give it a try next year. Going from a copy speed of nearly zero to contest ready is going to be a serious problem for me but I can try.

Then I see your post... Oh my. My first thought was "Wow! That would be great on field day to speed up finding stations to work!" I could even imagine that it would be pretty easy to automate most of the QSO process and depend on the computer to find, work and log contacts with little (if any) operator interaction required. This is, of course, at the heart of the whole debate over this new tool’s use. Is it fair to
the operator who doesn't have this tool if I use it?

How the CW contesters will deal with this new technology while keeping the playing field level? Beats me, but thinking about it leads to a number of possible solutions (Please folks let's add to this list.)
1. Ignore the new technology and live with the fact that folks who use it will likely increase their contest scores.
2. Regulate its use by handicapping folks who choose to use such tools.
3. Make the use of such tools illegal for the contest.

Each approach has its good points and it's bad ones.

Ignoring the technology would be a grave mistake. If it is not addressed, fully automatic stations during contests would become the rule and the single operator won't stand a chance. Gone would be the reward for staying up all night practicing those finely honed operating skills in an attempt to rack up a winning score. The winners would be asleep in the next room (or the next state for that matter) for the whole contest. That would be a bad thing for contests and for the hobby so we simply cannot ignore this.

Banning these tools from contests would also be a mistake. It would be like banning transistors, or DSP signal processing. We cannot ignore or discourage new technology and how it can advance the state of the art of radio. We must push to integrate new things that enhance our operating capabilities and encourage innovation in one of the few open areas left where the home brewing is alive and well. These days most are not going to build a radio to get on the air because it's

very difficult to build a state of the art rig at home. But you can write some software at home on your desktop with very cheap and readily available tools.

That leaves a middle of the road approach. I personally think that it would be best to regulate this technology's use in contests. We need to preserve the need for personal operating skills and reward those who work hard. But we need to recognize that melding technology with your station's operation in a effective ways is hard work too. I would push for a "regulation by bandwidth" kind of approach. This would handicap operators who use automatic spotting tools by some factor that is related to the receiver bandwidth being used. I would also clearly state in the rules that 100% automatic operation should not be allowed, but that there must be some operator interaction required for each QSO that takes place. The bad point to this approach is it will lead to more complex rules and make it harder to keep scores straight.

There should be a place for CW Skimmer in contesting and its use should be encouraged in ways that also encourage the development of these kinds of tools, and the integration of this kind of innovation into good operating practice.

I have a 4th selection to add to your list, but first some thoughts on
radiosport contesting in general.

I have a general dislike for the notion of "level playing fields". (To help you
understand "level playing fields", read KVG's "Harrison Bergeron" at
http://instruct.westvalley.edu/lafave/hb.html

I think that every serious participant in contesting should be developing
skills, adopting technologies, and engineering his station with an eye on
tilting the playing field to their advantage. Contesting and contesting rules
ought to be crafted in a fashion which encourages innovative thinking, adopting
new ideas, and increasing the pool of good operators and the pool of
technological communications tools, not handicapping those who would do so.

So it would appear that I'm advocating your choice #1 above (basically saying
"let 'em play and get out of the way"). And, yes, I support that mindset.

BUT.....

Contesting rules should >>also<< preserve a traditional space where "just a boy
and his radio" can compete with other "just boys and their radios". There is a
real concern that technologies like Skimmer can "crowd out" the human factor of
contesting, leaving just a collection of robo-stations duking it out.

SO.....

Here's the 4th selection I promised you (and I've asked the major contest
sponsors to consider).

4. Allow new technologies like Skimmer, but in the rules for each CW contest
include a "Classic" single operator category where the operator him(her)self
locates and works the target stations without any "automagic" aids like Skimmer,
packet clusters, or other techniques which locate and identify unworked
stations.

I left field day with a renewed interest in CW thinking that I might try and brush off the dust and cobwebs from my CW skills and give it a try next year. Going from a copy speed of nearly zero to contest ready is going to be a serious problem for me but I can try.

Good! Then go for THAT -- not the electronic automatic whiz-bang stuff that would give me one big yawn. There's real accomplisment and satisfaction increasing your CW speed and improving your operating skills. But if your head is being turned by the thought of automation, just recognize that as a completely different world of operating. I suggest you stay with your original plan and stay inspired. As far as I can imagine, there's no real operating skill required for automation.

To me, this is a classic example of "hand wringing" which I've seen
repeated over and over with ever new bit of technology to appear.

First it continuous wave, then AM, then SSB then RTTY, packet, PSK
etc. This is amateur radio, not "Freeze Frame" <your favorite era.>

I'm with Hans on this 4th approach. It's really no different than
Field Day where they have single operator battery vs multi-operator
on generator categories.

As it is, nobody's complained, or effectively at least, about the
canned "CQ CONTEST" keyers or voice loops. Used to be, "the big
thing" was to have a panadaptor to see who might be around you.

Short answer, "If you can't run with the big dogs, stay on the
porch." But they should and do have special categories for the
little dogs too.

I like this concept. I think that there is a place in contesting for people who use no technology except what's between their ears (and radio equipment, of course) and just as much a place for people who use every bell and whistle available. Developing new technology and learning to use it is a goal that contests should support.

I wonder if this could be implemented by adjusting the credit for QSOs based on how they were made. This is similar to CW contacts counting more than phone. It needs to be kept simple, but perhaps there's a way.

But the bottom line for me is that both groups should be encouraged -- the "classic" operator, and the technology-aided operator.

You don't have to wait. There are CW contests, QSO parties and
sprints of various kinds all through the year. There are also
software simulators for training between contests.

There's also DX chasing and good ol' CW ragchewing.

> Going from a copy speed of nearly zero to contest ready

That's not a new idea.

Some time back, there was an article in QST called "The Man Who
Broke The Bank", about a ham who built an automated CW SS
station. He and it (mostly it) made a record score, which would not
be topped for many years.

The article appeared in QST for May, 1953.

> This is, of course, at
> the heart of the whole debate over this new tooli¿½s use. Is it fair
> to the operator who doesn't have this tool if I use it?

Yes and no.

Of course a "Skimmer" can give an advantage. But so can almost
any other tool. Computer logging gives an advantage over paper
logging, paddles or a bug give an advantage over a straight key,
a rig that can transceive gives an advantage over one that can't.
Sharp filters, simplified or automated tune-up, better antennas,
you name it, the issue is the same.

IMHO a line is drawn when operator intervention is no longer needed to
make a QSO. Another line is drawn when the op gets direct outside help
in making QSOs, such as by a packet cluster.

> How the CW contesters will deal with this new technology while
> keeping the playing field level?

As long as we all have to follow the same rules, the playing
field *is* level. The players may not be equal, though, but
that's what competition is all about.

> Beats me, but thinking about it leads to a
> number of possible solutions (Please folks let's add to this list.)

> contests
> and for the hobby so we simply cannot ignore this.

But the Skimmer does not make QSOs. It simply tells you where stations
are that you may want to work.

Except in 1B-1 class, the same thing could be done on FD by having an
operator with a receiver tuning the band and writing
down notes as to where the new ones are.

> Banning these tools from contests would also be a mistake.
> It would be like banning transistors, or DSP signal

You'd be surprised what can be done on FD without either of
those things....

There are some very high performance kits, though. And the rig
is only one part of the system; the antenna, location, conditions
and operator are all parts too.

> But you can
> write some software at home on your desktop with very cheap and

Of course. But when it comes to state-of-the-art software, what is
required?

I think true automatic operation is already not allowed, because there
must always be a control operator. I'm not sure, though.

> There should be a place for CW Skimmer in contesting
> and its use

Here's an analogy:

I think amateur radio contesting is best described by the term
"radiosport". IMHO it shares a lot with competitive techno-sports such
as bicycle racing or distance running.

In all such sports, technological improvements have made a big
difference, whether it's better running shoes for the distance runner
or a better bike for the bicycle racer.

But at the same time, there's a clear line drawn of where an
improvement becomes "unfair". Putting even a small motor on
a bicycle means it's not a bicycle anymore. Rollerblades are not
a new form of running shoe. In amateur radio contesting, we need
the same sort of mindset.

There's another angle, too.

Very few bicycle riders can qualify for a world-class race, let alone
win one. Few runners can qualify for the Boston or New York Marathons,
let alone win them. Yet many will ride bikes and run
marathons even with no hope of winning or placing significantly.

The reasons they do it are many, and I will only cover a few.

1) To simply prove they can do it. My first marathon was like that; I
just wanted to know I could run one in under four hours, and I did.

2) Because it is fun in and of itself. In the past few weeks I got the
ol' 10 speed out and started riding. It was tough at first but now I'm
up to 20 miles at a clip. Tomorrow I try for 25 miles. I'm not fast or
fancy and the hills of Radnor make it a challenge, but it's great fun
to go flying down the other side!

3) As training to get better.

4) To see how good one can do within one's own limitations. I'll
probably never win any race, nor any contest, but that's not the

point. Back in 1995 the rig you see in my shack pictures and I made 629 CW FD QSOs in class 1B-1, with simple antennas.
While that's not a world record, it's a personal one that I hope to better someday.

Competition is NOT about "level playing fields". True competition is about working (within the rules) to tilt the playing field to your own advantage. Things like honing your skills, improving your station, and seeking out new (legal) tools that your competitors may not have gained access to.

>> 1. Ignore the new technology and live with the fact that folks who
>> use it will likely increase their contest scores.

> Like every other tool that has come along...

"Skimmer" isn't "like every other tool that has come along". It is an instant game changer; in military tactical terms a "force multiplier".

> But where does one draw the line? Should a panoramic
> display/bandscope be allowed? Should logging computers
> be banned?

In terms of the classic "boy and his radio" category of contest participant, I believe the line must be drawn on the south side of Skimmer.

A panoramic display simply gives a general idea of conditions and activity levels on a band. It's a handy tool but doesn't identify a single call sign, or replace any CW copying skill.

A logging computer simply provides a more efficient means of "book-keeping". It's a handy tool but doesn't identify a single call sign, or replace any CW copying skill.

Skimmer, on the other hand, is like having dozens and dozens of assistant operators scanning the bands from top to bottom and in real-time feeding you the callsigns and the QRG's of EVERY STATION THAT IT HEARS ON EVERY BAND IT MONITORS, and "nudging you in the ribs" when it identifies a needed multiplier.

For this reason, I believe that every major contest sponsor must maintain one category "Skimmer free" where humans can compete with humans, finding, identifying with their own ears, and working the stations that go into their log.

Outside of that "classic" category, let Skimmer roam free.

I, too, realized that my CW skills have faded from underuse, and I promised to get back up to speed for next year's Field Day. It's fun to do simple stuff, with simple radios: it reminds me of how much I learned and hard hard I worked to get my license, and also about how much magic their is in a good antenna and rig.

But it's also fun to innovate and try out new things like SDR or CW Skimmer or Packet Radio or the next killer app. It's important to remember the past - it teaches us that fortune favors the prepared - but it's also important to welcome change, and I don't think that putting restrictions on automated operation or machine-aided reception would be either enforceable or productive.

There is, as always, the issue of compexity: being good at managing an automated computer system does _not_ mean you'll be good at allocating supplies and anticipating demands when all you have to work with is a clipboard. We could argue that any added complexity reduces our capacity to react and to be productive in a disaster, when things tend to break and simpler is almost always better. However, telling a curious ham "NO!" is a sure-fire way to make sure he does it anyway, so let's assume

that hams who use CW Skimmer or other software will make intelligent decisions about how to best use their assets in an emergency.

Ham Radio is, of course, a hobby - but so was skateboarding when Tony Hawke started doing it. We all start out as amateurs, and it's only by pushing the envelope that we learn what's possible when we look further and try harder.

Please don't let this technology put pause to your desire to kick up your
manual CW skills!

Really, HF ham radio itself is an obsolete skill.

Not that that's a bad thing. There are still millions who build model
railroads (I'm sure there are more model passenger trains than real ones
these days!); who restore 1957 Chevys; there's a special season for
hunting with black powder rifles here in Tennessee.. and we've got plent
y
of Civil War re-enacters. People enjoy doing things their ancestors did.

Sending (and receiving) Morse is no different.

As a brief aside, in the current implementation, Skimmer does NOT replace
the human CW operator for most contests. Skimmer only copies calls. (an
d
whether a station is calling CQ or not) It doesn't copy the class - the
"2A" "3F" "2C" part. That said, I'm sure it would be trivially easy to
add this capacity if someone wanted it.

Also, in the current implementation, Skimmer is designed only to find
CQers to call. It really isn't useful for allowing you to call CQ & copy
those who respond. Only in QRP categories do you stand any chance of a
competitive score without extensive CQing.

> How the CW contesters will deal with this new technology while keeping

h
> tools illegal for the contest.

And there has been a rather heated discussion of just this topic over on
the cq-contest reflector.

(I should emphasize, my comments below are with regard to a "local
Skimmer", where the Skimmer equipment complies with the existing 500m
circle rule - all equipment is within a circle of 500m diameter.
"Distributed Skimmer", where multiple Skimmers are connected over the
Internet, should make one a multioperator or "assisted" entry.)

Personally, at the root, I don't think Skimmer is anything radically new.

We've been allowing automation to take over various functions of our
operation for a long time.

Automatic Morse transmission dates back to the early 1980s. (for some
stations, much earlier)

It used to be important to know the difference between a VP5 and a VP6,
and the beam headings to their countries. Today, the computer will tell
you what country they're in; that the VP6 is worth more points than the
VP5; and which way to swing the beam to work either one. If you have the
right rotor controller you don't even have to swing the beam yourself.

Most operators are using a super-check-partial database, widely
distributed on the Internet. Hear "C4UA" & type it into the window, and
it automagically suggests you're listening to KC4UAI.

Yet automation is not perfect. The operator who trusts everything his
computer tells him is going to get screwed when he takes the
super-check-partial database's word for it & doesn't bother to copy the
rest of C4UA's call. He might just miss a double mult when the RAF issue
s
ZC4UA. The operator who passes up VE1XR/1 - the .cty file says it's just
Canada - may regret it when he learns the guy was portable on Sable Islan
d.

And Skimmer doesn't get it right all the time. It's pretty good (and wil
l
get better) but you really MUST verify what it's copying. Especially in
those contests that have an additional penalty for "busted calls".

Personally, I think to a large degree we *can* ignore this technology. I
t
is not so radically different from technologies we consider commonplace.
Maybe if we want to discourage it, the best method would be to increase

the penalty for busted calls. Say, for every incorrect call in the log, the four subsequent valid QSOs are removed as a penalty. (and any multipliers that those QSOs may have reflected)

I disasgree, Hans.

> True competition is about
> working (within the rules) to tilt the playing field to your own
> advantage.
> Things like honing your skills, improving your station, and seeking > out
new
> (legal) tools that your competitors may not have gained access to.

Perhaps we're using different definitions of "level playing field".

You mentioned the excellent KVG short story "Harrison Bergeron". IMHO,
that story isn't about leveling the playing field; it's about leveling
the *players*. The things you describe - honing your skills, improving
your station, and seeking out new (legal) tools - are about improving
the player, not changing the field.

> "Skimmer" isn't "like every other tool that has come along".
> It is an instant
> game changer; in military tactical terms a "force multiplier".

Perhaps.

DEVIL'S ADVOCATE MODE = ON

But isn't that true of many other tools?

Consider the rig that can transceive as opposed to separate
transmitters and receivers where the transmitter frequency must be
manually set to match the receiver. When working hunt-and-pounce in a
contest like the SS, the transceiver-equipped station is way ahead,
because a whole set of operator skills has been automated. Same for

the modern no-tuneup rig with ATU vs. one that has a series of manual tuneup steps.

Or consider the integrated logging/sending computer system vs. paper logs. A considerable amount of operator action is automated in such a system. The op doesn't have to record band, time, date or mode, the computer does all that unerringly. The op doesn't have to send the exchange or keep track of serial number, the computer does that too. Avoiding dupes is easy; the computer flags them and even gives you the info on the previous QSO.

The past few years on FD we've used N3FJP software networked between computers at each rig. If you enter the call of a station that has been worked on another band/mode, it will tell you the exchange and fill in the blanks for you!

Agreed.

> A logging computer simply provides a more efficient means
> of "book-keeping".
> It's a handy tool but doesn't identify a single call sign, or replace > a
ny CW copying skill.

But it does replace a lot of operator skills, and reduces the workload on the operator. It also replaces huge amounts of operator *sending* skill if enough function keys are programmed.

I've worked contests where a human logger was used to improve the performance and reduce the workload on the op running the rig. The logger's main job was searching the paper dupe sheet for dupes. In many contests, the use of a human logger put the station in the multiop category.

I've also seen operations where the logger's job included spotting the transmitter and keeping it tuned up properly. Band change goes a lot faster when there are four hands to do it! And in many contests, the use of a second op like that put the station in the multiop category.

What logging computers and no-tune-up rigs have done is to automate those skills that were formerly done by human operators *without*

putting the station in the multiop category.

> Skimmer, on the other hand, is like having dozens and dozens of > assista
nt
> operators scanning the bands from top to bottom and in real-time > feedin
g you the
> callsigns and the QRG's of EVERY STATION THAT IT HEARS ON > EVERY BAND IT
> MONITORS, and "nudging you in the ribs" when it identifies a
> needed multiplier.

Just like your own personal packet cluster. Which puts a station into
a different category (assisted).

I can imagine that it could (in theory) be set up to determine which
of the stations it hears is the most desirable to attempt to work
next, based on a complex formula of rarity, propagation, one's own
DXCC totals, etc. (if it doesn't do this already...)

> For this reason, I believe that every major contest sponsor must
> maintain one
> category "Skimmer free" where humans can compete with
> humans, finding,
> identifying with their own ears, and working the stations that go
> into their log.

> Outside of that "classic" category, let Skimmer roam free.

I agree 100% with the "classic" category. Or call it "Unassisted", or
even "Iron Op" or some such.

But while still in devil's advocate mode, consider this:

You use the phrase "finding, identifying with their own ears, and
working the stations that go into their log.", and I agree on the
reasonableness of that.

But when it comes to finding stations, isn't the use of a logging
computer a big help in finding new ones, because it will tell you
instantly and unerringly if a station is a dupe? Isn't it a big help
in getting them in the log because it automates some of the data entry
and makes the rest easier?

When it comes to working them, isn't an automated sending setup (Morse
Code or digital voice recorder, for example) a big help in working
them, because it eliminates most or all of the sending?

IOW, you'd keep a Skimmer-free category because Skimmer acts like a
group of robot second operators helping the human operator. But aren't
logging/sending computers, DVRs, and even no-tuneup rigs in a similar
situation, because they behave like robot operators helping the human
operator? Granted, Skimmer is different because it acts like a whole
group of robot operators, but isn't the concept the same?

I guess it all depends on what you define as operator skill. ISTM that you (and many others) consider it OK to automate Morse Code sending, but not receiving. It's OK to automate logging and duping, spotting the transmitter frequency and keeping the rig tuned up, but not finding new ones.

I'm not making a judgement, just an observation. I'm not sure where I stand on those issues. But I do agree a line must be drawn; there's a difference between developing a better bicycle for the Tour de France and allowing the use of motorcycles in that race.

I really do support the idea of a "Classic" category in all contests. Perhaps we should write up a proposal and send it to the various contest sponsors?

Seems to me that if the use of Skimmer is classed the same as the use of a packet cluster or spotting net, we're 99% of the way there.

I have to disagree with this.

Perhaps the easiest example that fits into this thread is the "automation" of a keyer versus a straight key. Using a keyer is much different than using a straight key and requires operating skill.

Perhaps you object that a keyer isn't "automation". Perhaps not, if you meant the term to mean "using a computer". But I submit that operating skill is required to use those tools, too. When I switched from a paper dupe sheet to a logging program, I had to develop a new skill.

Personally, I happen to be a purist; I'll use a logging program but I'm not interested in using computer-generated CW or computer-aided QSOs. But the important words are "I'm not interested." Just like many other aspects of our hobby, my lack of interest does not imply that something is inherently good or bad. It's just different, and if someone else IS interested that's great.

Even though I have no desire to use or develop computer aids to contesting, I think that people who do should be encouraged and that their skills should be recognized. An important aspect of ham radio is pushing the state of the art, and developing/using/testing this kind of facility is as much a part of that as developing new electronic circuits. When we've lost the ability to innovate, and to encourage innovation, we've lost an important basis of the whole hobby.

Apologies for my initial post without text.

There's plenty of Sporadic E propagation to Europe and Africa today:

I worked CT1HZE via CW and four EA8 stations with SSB. There were a number of Italian and Spanish ops. I heard EA4UW 5/7 but he couldn't copy my 900w and 5 element yagi at 73 ft.

Mexico is phasing in DTV just as we are - they're just taking a lot longe
r
to do it. There is already a full slate of DTV stations in Tijuana -
starting with XETV's on channel 23. DTV stations are on the air in
several other border cities (Juarez, for one) and in Monterrey.

If they don't change their rules before then, there will indeed continue
to be analog TV stations in Mexico until 2025 - but by then there will
also be a full complement of digital stations.

Are you disagreeing with my imagination? ;-)

There have been many aspects of ham radio's various levels of automation I've taken advantage of. As you and others have mentioned, an "automatic" keyer (I used to have a good fist on a straight key), a transceiver (I grew up with a separate transmitter/receiver setup with separate antennas: no auto relay), a transmatch with variable capacitors and switchable tapped coils... stuff like that.

What I was getting at is that I can't imagine being involved in any contest or any casual QSO with an automatic CQ-seeking machine that does all kinds of things that take away from what I can do between my ears. It's not for me. Those who develop those programs and skills are doing a great service as contributing hobbyists by at least pushing technology ahead -- you're right. And there are many, many aspects to ham radio. It's a hobby, and we have much freedom within it to pursue these aspects and develop them further. *I* have no use for many of them. I'd continue to push the OP to develop his CW skills and get back to the basics. It's fun.

If there had been any more EA8 stations, it would have sounded like
Canaries Field Day. I caught CT1HZE on CW and later found him up the
band for an SSB QSO. CT1ANO was also on SSB. There was a station in
Gibraltar but he was never strong enough at my QTH for a QSO. I heard
many calling EA4UW but few actually working him.

to be analog TV stations in Mexico until 2025 - but by then there will
also be a full complement of digital stations.

Only U.S. border-sharing areas will have DTV, because it's for stations that
have U.S. reception. TWIAR reported about 2 months ago that Mexico actually
passed a referendum NOT to consider a change in non-border-sharing areas
until 2025.

Straight keys, sideswipers, bugs and keyers all require operating
skills. They all require different but related operating skills.

A keyboard Morse generator also requires a certain amount of skill,
but there's a fundamental difference between a keyboard Morse
generator and the keys mentioned above: the keyboard Morse generator
can be used by someone with no knowledge of Morse Code.

> Perhaps you object that a keyer isn't "automation". Perhaps not,

A keyer automates making dits and dahs. The operator input required
for a keyer is much less than that of a straight key.

> But I submit that operating
> skill is required to use those tools, too.

Of course, but they are different skills.

>When I switched from a paper
> dupe sheet to a logging program, I had to develop a new skill.

So did I. But computer logging automates much of what an operator
using paper logging does.

For example, paper logging SS means logging not only the exchange
received, but also the time and band, as well as entering the call
into the dupe sheet. With a computer, all but the exchange itself is
automated.

> Personally, I happen to be a purist; I'll use a logging program but > I'm

age
> innovation, we've lost an important basis of the whole hobby.

I agree 100%. But at the same time, there need to be some rules that recognize the sporting nature of contesting.

Every major contest I know of has some recognition of power level. Field Day, which started this discussion, recognizes three power levels:

QRP, which is 5 watts or less with non-generator-or-commercial-mains power,
Low power, which is all stations who don't qualify for QRP and are running 150 watts or less
High power, which is 150 watts to 1500 watts.

The idea is to recognize that more power changes the game significantly. If there are power categories why not automation categories?

Good point. But there's a progression from using a CQ wheel, thru letting the keyer complete the contest QSO, to having a computer automatically copy the exchange, log it, and send the response. Somewhere in that progression my threshold for "doing it myself" is passed. It's not really an objective thing . . . I am OK with a programmable keyer that will send CQ, and I'll use a computer-based logging program, but much past that and it changes the flavor of the operation.

Because power is objective -- you can easily measure it -- while automation is much more complicated. There's not an "automation meter" that you can read and say "I'm in category C."

I think that a recognition of automation is good, but I recognize that the rules are likely to be complex. For example, if you establish a "purist" category, where do you draw the line . . . keyer? memory keyer? keyer that can generate sequence number? computer logging and dupe checking? spotting? CW copying? CW generation?

It is, after all, a hobby. I'd hate for it to degenerate too much into bean counting.

My point is simply that everyone's "line of purity" is probably
slightly different.

> > Every major contest I know of has some recognition

> an "automation meter"
> that you can read and say "I'm in category C."

There can be. Here are a couple of "lines of purity":

1) Full automation, such as was fictionally depicted in "The Man Who
Broke The Bank", is when no operator intervention is needed. to make a
QSO. The operator may sit there and watch the system run, and
interrupt it if s/he wants, but if the machine doesn't *need* any
operator intervention, there's an objective line.

While not yet a reality AFAIK, it seems to me that building such a
station for the various RTTY modes is not beyond the realm of

possibility with current methods.

2) Automation that eliminates a particular skillset completely. In the case of CW contesting, if an operator with no Morse Code skill can make contacts because a machine does all the encoding and decoding, something has been lost, and there's another objective line.

3) Automation that extends beyond the actual operation of the rig, like a packet cluster. This line is already recognized; use of a packet cluster puts one in an "assisted" category. It seems to me that a Skimmer would fit here.

4) Automation that partially eliminates a particular skillset. In the case of CW contesting, if a QSO can be made with the computer doing all the sending, there's another objective line.

Not that any of the above should be banned; they just get different categories.

> I think that a recognition of automation is good, but I recognize

y
> keyer? keyer that can generate sequence number? compute
r
> logging and
> dupe checking? spotting? CW copying? CW genera
tion?

See above for some ideas. Here's another: a point system.

Start out with a basic station: transmitter, receiver, antenna, straight key, paper logsheets.

Now give each level of automation a point value:

Transceiver: 50 points
No-tuneup transceiver: 60 points
Bug: 10 points
Keyer: 20 points
Keyer that can generate messages: 30 points
Computer logging: 20 points
Automated beam heading: 5 points
Second VFO: 10 points
Memories: 10 points

etc.

There would be a point value below which you'd be in the "purist" categor, or some such.

> It is, after all, a hobby.

I disagree!

I think it's much more accurate to describe amateur radio contesting as a form of sport rather than "a hobby". An amateur sport, of course, but still a sport just like baseball, bicycle racing, golf or tennis. There's competition, rules, skill of the players, improvements in equipment, and constant discussion about what should be allowed and what shouldn't.

> I'd hate for it to degenerate too much into
> bean counting.

But just because we don't get paid for doing it doesn't mean it shouldn't be taken seriously. If anything, amateur sports are a place to take these things very seriously, because the outcome doesn't matter as much as the game.

For example, if the marathon were shortened to 5 miles from 26.22, a lot more people would compete. But it wouldn't be a marathon anymore.

I don't play golf, but it is my understanding that there are golf ball designs that will add dozens of yards or more to most players' drives. But such golf balls are not recognized for competitive play because they change the game so much.

All sorts of improvements have been made to racing bicycles but there's a line at adding a motor.

Auto racing is probably the best example. It is probably possible to build a car that could win the Indy 500 easily, by simply having so much speed, power and fuel tank capacity that no existing Indy-car could keep up. But such a car would have to break several Indy-car restrictions such as engine displacement and fuel tank size, and would not be allowed to race.

>
> I disagree!

For some of us, it's a hobby. For others, it's their life. There is a huge difference between someone who spends a few hours working a contest from their home station with a simple transceiver and a dipole, versus one of the "big guns" who has invested huge amounts of time and money building the ultimate contest station with stacked beams up 150 feet on top of a mountain.

And I still yearn for the years when the Olympics were limited to true amateurs.

Here's an example that illustrates what I'm trying to say. Bridge is a card game. I enjoy playing it. Many years ago, four of my friends played bridge during their lunch hour at work. One of them was on vacation, so they asked me to fill in for him. I flubbed playing a hand, and the three of them were so upset that they wouldn't speak to me for a week. These people had taken a card game into territory where I don't care to tread. That doesn't make their daily game "bad"; it's just not something that I personally care for.

The same thing can be said of any sport, and I agree that ham radio contesting is the same way. There are cutthroat competitors out there, some of whom have spent vast amounts of time and money building the ultimate contest station. Of course they want to come up with a huge score, and they will go to great lengths to achieve their goal. OK, different strokes for different folks. That's not what I enjoy about a contest, but it's certainly their prerogative to enjoy those aspects.

There are different levels of "serious". There are different motivations for entering a ham radio contest.

But to get back to the original question of whether there is an effective way to "level the playing field" relative to use of technology in a ham radio contest. My personal conclusion is that the current simple rules of putting people into broad categories based on power, number of operators, "assistance", and so on are good enough. There are just too many variables to go any farther. I'd rather see the handicap system be crude than try to improve it by adding lots of additional factors, especially when they're impossible to measure.

Someone sitting in a super station with stacked beams at 150 feet has an inherent advantage over me with my dipole. But how much of an advantage? Is it ten times easier for them to make a QSO? If we're going to "level the playing field", what handicap factor should we use? There's no simple way to deduce it.

> Auto racing is probably the best example. It is probably possible to
> build a car that could win the Indy 500 easily, by simply having so

> not be allowed to race.

How many thousands of pages of rules and specifications do you suppose there are that spell out in great detail exactly what is allowed in a car that can enter such a race? That's exactly the kind of thing I'm trying to avoid.

The factors that are used now to determine contest class are easy to measure -- things like input power to the transmitter, number of operators, spotting receivers. The result is some leveling of the playing field. Adding additional factors would improve the handicap system, but at the cost of adding complexity and forcing entrants to make subjective evaluations. I don't think that there would be enough improvement to justify increasing the complexity of the rules.

It might be an interesting exercise to research the top ten finishers in popular contests and compare their equipment and techniques. I'm sure that avid contesters do this, sort of like football teams that review the tapes of their competitors' games. How much does the hardware (location, antenna, state-of-the-art radios) contribute to the score, compared to operator skill?

It has in fact been done, for CW. N6TR did it some years ago - I want to say 1985!

I think he only used it once. Tree enjoys winning contests; even today, automation technology is not up to that.

=====

A dilemna here, and with many other current issues in contesting, is "category creep". Should SO2R entries have their own category? Should there be separate categories for "low-power and dipoles" and for "low-power and beams"? In some contests, a significant majority of entrants win, because there's pretty much a category for everyone!

So I think we have to ask: if we're going to split Skimmer users into a separate category, do we need to get rid of a category distinction somewhere else?

I actually see value in both approaches. It takes a mixture of what I
call "classic radio operation" (where the radio knobs are turned,
signals received by ear, and keying done by hand) and the use of
automating technology (electronic logs, automatic keyers, and an
increasingly more capable forms of automation) to stay up with the
state of the art. Both involve hard work and dedication to do the job
well and both are valuable skills to develop.

I would hope that the rules that govern contesting will take both into
account and encourage the development and integration of new tools
while maintaining the need for the classic radio skills.

I'll have to dig out the archives and see how he did that in 1953
without the benifit of your modern computer. I'll bet there was some
serious integration work that took place to make something like this
work that many years ago.

>

Personally, I think you have hit the division points the same places I
would. They are logical lines that are fairly easy to define. I
cannot get rid of the nagging thought that CW Skimmer (and things like
it) in some ways can blur these lines, but so can electronic logging
coupled with automatic keying, but I do like the simplicity of your
approach.

>
> But the Skimmer does not make QSOs. It simply tells you where stations
> are that you may want to work.

Actually this is true right now, but it seems that it is only a short
step from where we are now (in terms of technology and automation) to
the sport becoming more of a "point and shoot" affair. CW Skimmer (or

things like it) could easily be made to check with your electronic log, review the current contest's rules, review the signal strengths of incoming signals then provide the operator a prioritized list of who they should work next to maximize the probability of getting the best score. Once you are at that point, it's a quick hop to removing the operator from the cycle.

It may not do this yet, but from where we are to fully automated is not that far. The hard part has been done.

> > Banning these tools from contests would also be a mistake.
> > It would be like banning transistors, or DSP signal
> > processing.
>
> You'd be surprised what can be done on FD without either of
> those things....

True, these things are not necessary for RF communications, but they represent the "state of the art" in radio technology today. Besides, I'd hate to lug enough batteries around to get a 100W tube station on the air in a parking lot. It's been a long time since your average HF rig for sale used Tubes, and even longer since they started using transistors. Now the average HF rig is ripe with solid state components and are digitally controlled. Try to tune your tube radio with my laptop though software and you are going to have your hands full, yet the average HF radio today is going to have DSP and computer control ability.

>
> There are some very high performance kits, though. And the rig
> is only one part of the system; the antenna, location, conditions
> and operator are all parts too.

And I would like to point out that we don't handicap stations for antenna height, using a beam, where they are located (with some exceptions) and stuff like that. How to set up a station to operate effectively is an important part of operating. Antenna selection, station grounding and things like feed line losses all play an important part in the performance of a station, yet get ignored by the rules. Doing a good job engineering these things is very important. Having all the automation in the world won't help you if your station doesn't work on the air in the first place.

>
> I think true automatic operation is already not allowed, because there
> must always be a control operator. I'm not sure, though.

Thinking about it; I think such a station *could* be legally set up and operated. The question of how "in control" does the control operator need to be is an interesting one. Surely a packet station is legal and the control operator of a packet repeater doesn't see and approve every transmission. Some are located in very remote locations

with no control operator sitting there all the time. PSK guys run 100% automated too, with their stations logging QSO's while they sleep or work. How would what I describe be different?

I like your general approach. Don't ignore this new technology, but also don't place too many regulations on its use. I also like how you drew the lines because these lines are clearly understood.

LOL

I wish He had gone on and extended the PRB-1 ruling to include the pesky CC&R's that will forever keep me from building a tower without having to move first. I'm sure the creator of the universe has the proper authority, even if the FCC doesn't think it does.

I so wish that the FCC could be persuaded to reconsider us hams in their limited preemption of CC&R's and give us the same standing as TV antennas and satellite dishes. All I want is reasonable accommodation here. As it stands Iï¿½m left to what ever I can cram into the attic and nothing higher than the top of the roof on my single story ranch.

If I could only put up a few supports and a 35ï¿½ vertical, what a difference it would make.

The article was fiction. At the time (a year before I was born!) it
must have seemed
really far-out. Today it's almost reality.

Point is, the *idea* isn't something new.

The thing about electronic logging, computer-generated keying driven
by
function keys and the like is that they still need operator
intervention to
work. Full automation does not.
>
> > But the Skimmer does not make QSOs. It simply tells you where stations

Just like a packet cluster - which puts you in a different category.

In fact, you don't need all of those features. All that's needed is
for the
system to be able to make QSOs by itself.

> It may not do this yet, but from where we are to fully automated is
> not that far. The hard part has been done.

Maybe. About 1950, Alan Turing himself thought that computers that
would pass
his hypothetical Turing Test of machine intelligence would be around
in less than 50
years.

Sort of.

> Besides,
> I'd hate to lug enough batteries around to get a 100W tube station on
> the air in a parking lot.

Batteries? Parking lot?

I've done FD with tube gear, it's not that much harder than with
"modern" stuff.
The main difference is that the rigs tend to be bigger and heavier,
and you
need to know how to tune them up. All part of the game.

In 1995 I used the rig shown on my web page (google my call to see it)
on
Field Day in clas 1B-1. Antennas were an 80/40 inverted V with the
apex at 40 feet
on a homebrew wooden mast and a 20 meter ground plane vertical.
Paper logs, bug and straight keys. Power from a generator. All set up
in
a tent, on a homebrew portable table. Also had my 2 meter
rig for FM simplex QSOs. This was a solo operation - I brought

everything to the site, set up
all by myself, operated all 24 hours, took everything down and brought
it home. All of the
equipment and me in a 1980 VW Rabbit.

629 CW QSOs, 11 FM voice QSOs. Bonuses for 100% emergency power, W1AW
message, message to SM, and making 10 QSOs on VHF/UHF.

A lot of work but a lot of fun too. K0HB speaks of "a boy and his
radio" and that's
what it was. Wasn't the only time I did it, either.

Point is, it can be done, and a decent score earned. In a contest like
Field
Day, a lot of those features may not make a lot of difference in how
many
points you make.

> doesn't work on the air in the first place.

That's very true! But here's the important point: The reverse is also
true. Sit an unskilled op down at the best station imaginable and
if s/he doesn't have the skills, the QSO rate will be very low.

In the case of Morse Code contesting, a person with no Morse Code
skills won't make any QSOs at all unless some form of code reader
and code generator are used.

But there comes a point in automation where the operator's skills
become
unnecessary and the machine does it alone or nearly so. Repeaters of
various
types are like that - the operator only intervenes to start and stop

it, not to make
QSOs.

For one thing, FCC limits such automatic operation to certain band
segments. More important, I don't think any contest now in existence
would give credit for such automated operation.

Note that contacts made through terrestrial repeaters are not counted
in any contest I know of.
>

Thanks!

In the long run we may need more categories, but that's the price of
increased complexity.

Here's another analogy: Chess competition.

There are now chess-playing software packages for your PC that can be
set to levels that are very difficult to beat. The very best chess-
playing computers ("Deep Blue", for example) may prove to be
unbeatable by *any* human, if they are not already that good.

But does that mean the person or team who writes the software is the
world's chess champion? If a machine is built that is truly
unbeatable, what would be the point of playing it? Should human chess
competiton be transformed into Machine A vs. Machine B?

IIRC, there was a dispute about a feature of Deep Blue's software. As
I recall, the software included an enormous library of games played
over many years. Part of what the software did was to compare the
present state of the board to those recorded games and determine
possible next moves from the successes of the past. It also avoided
possible disaster from the failures of the past. Its library of past
games was limited only by the ability of the humans to encode the
games into its memory. From what I recall, the dispute was that
allowing such a system was like allowing a human player to have a huge
chess book available while playing. So the issue isn't limited to ham

radio!

They can be persuaded the same way that the OTARD (TV antenna and satellite dishes) got covered -- the big money went to The Congress and "persuaded" them to pass a law directing the FCC to exercise preemptive jurisdiction.

At the last go-around visiting the issue, the FCC said in several words that until such "direction" comes about with the ham community, they will do nothing. Every time that such a bill is introduced into The Congress, it goes nowhere.

Lest I be called an apologist, during my years on the FCC staff I ticked off my non-ham boss when I stood up for the ham community's needs every time. In retirement I "earn my keep" as an ARRL Volunteer Counsel by assisting amateur licensees in "bringing the light" to those municipalities over which the FCC's PRB-1 can exercise preemptive jurisdiction.

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html |

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

"Leveling the playing field" is only important to those who want to win (or have a category that they can win) but haven't the resources to compete in an "open" situation. Since I don't care about that, it doesn't matter to me. I just like to pick up a few contacts, polish my skills, make sure my station is working correctly and so on.

As K2ASP says, that action has to come from Congress.

IMHO, part of the problem is that CC&Rs are a different thing
than zoning ordinances and other govt. regs. Most anti-antenna
rules are essentially private contracts that you, the buyer, agreed
to when you bought the place. Asking for preemption means you
want out of that part of the deal. That's a tough sell!

It is my understanding that what drove the OTARD process for
satellite TV was that the satellite TV companies pushed the case,
and invested the sizable $$$ resources necessary to win. IIRC, their
argument was essentially that the no-TV-antennas CC&Rs effectively
created a cable-TV monopoly by making it impossible for some people to
choose satellite TV, since the dish has to have a clear view of the
sky where the satellite is. Regular broadcast TV was added to the mix
a bit later, basically on the same argument.

There was big money at stake because the satellite TV folks saw a huge
part of the TV market being off-limits to them because of
no-satellite-dish CC&Rs.

> All I want is reasonable accommodation
> here.

The problem is, who determines what's reasonable? In some places a
clothesline in the back yard is considered an eyesore!

> As it stands Iï¿½m left to what ever I can cram into the attic
> and nothing higher than the top of the roof on my single story
> ranch.

Well, it's a buyer's market now....

Besides pushing Congress, one of the things I think we hams could do
to help the process is to never refer to amateur radio as "a hobby" or
even worse, "just a hobby". While most hams do radio simply as an

avocation, IMHO the word "hobby" carries with it a sort of meaning that it's not a serious thing worthy of protection.

You'll never hear folks who do sports or art nonprofessionally refer to those activities as "just a hobby". Nor will the term be used by volunteers who donate their time and efforts to a variety of causes.

IOW, "hobbies" don't get the kind of respect we want amateur radio to have. If we hams describe amateur radio as "just a hobby", the folks who want to restrict us may think "well, if they say it's just a hobby, what's the problem with a few restrictions?" and "there are all sorts of hobbies that these homes don't accomodate, like raising horses, target shooting, or pleasure boating with a boat that won't fit in the garage. What's different about your radio hobby?"

You can be sure the satellite TV people pushing for the OTARD ruling never, ever referred to watching TV as "a hobby", even though their viewers don't get paid to watch TV.

There's a difference between "haven't the resources" and "choose not to
use the resources".

I don't have a mountaintop QTH with several towers topped with stacked
arrays, and I don't have the latest fancy radios to handle the QRM or
the KW amplifiers to go with them. Those are resources that I don't have.

But I have a computer, and if I didn't have this Luddite idea that CW
should be copied by my own wetware, I could use it to improve my score.
That's a case of choosing not to use a resource. It seems pretty
clear that those of us who choose not to use automation are in contests
for the same reason that you are, and winning isn't the goal.

As I consider the reality of contest categories, I realize that what
they're really doing is separating the "big guns" into their own
category. Anyone who has invested the time and money to build a
mountaintop station with big antennas and fancy radios is going to end
up in the high-power multi-op category. To avoid competing with these,
stay out of that category. This limited attempt to level the playing
field does accomplish something using criteria that are easily measured
(e.g. input power, number of operators).

Morally, I would suggest that when a given CC&R restriction is universal
- when *every* acceptable property in an area carries identical
anti-antenna restrictions - then that contract provision was NOT agreed
to. It was *forced* on a buyer who does not have the option of buying a
property 5x the size (and 5x the price) of anything else in the
neighborhood/living on a street with four crack houses/living 50 miles
from work/etc..

In a moral world, the amateur should be able to invalidate anti-antenna
restrictions by showing that no comparable property was available that
lacked those restrictions.

Of course, in the real legal and political world, no such right exists or
is likely to come into being...

And, I would suggest, supported by a cable TV industry that wanted
to be deregulated, something that wasn't going to happen if a large
fraction of their customers had no alternative.

Well, my point was that technology has moved on and right now tubes
are not state of the art. (Not saying that they won't be in the
future.) And Iï¿½ll bet your 2 Meter rig was at least partly solid
state. Sure they work (and in some cases are the optimal solution for
a problem) but I don't see one new rig for sale today that has even

one tube.

I think that the rules of contests may need to be adapted from time to time to adjust for technology as it marches on, however I think that we need to be mindful of two things.

First, the rules must be clearly written so everybody understands where the various lines are drawn.

Second, they need to keep things as simple as possible.

Apart from that, the folks who are writing the rules for these events are the ones who will need to make the choices. If a contest's rules attract participants, good for them, if they are no longer popular they need to adapt or close up shop.

Personally, I'm worried that with the increased average age for your local ham translates into lack of interest for those of us who are younger (say mid 40s). I see this as a problem for contests and not just the hobby in general.

Level playing fields result in "average" operators at "average" stations, regulated by rules which stifle competition, not enhance it. It is my opinion, based on decades of participation and observation, that serious that serious radiosport hobbiests are OPPOSED to "levelized playing fields" (other than broad categories to separate the "bicycles" from the "motorcycles").

Within their category, serious competitors do everything possible to landform the playing field to their personal advantage. They hone their receiving skills, their operating habits, and their equipment performance. They study propagation models and forecasts to optimize their band-change plan and their time-off strategy. They analyze logs (theirs and others) of previous contests to ferret out reasons for wins or losses (when should I "run" and when should I "S&P"). They optimize their antenna farm to the next contest (a winning CQWW antenna farm is probably a lousy Sweepstakes antenna farm and vice versa). They develop new skills, like SOxR. They lurk at online "water coolers" like the "CQ-CONTEST" email reflector. They optimize their operating layout for streamlined ergonomics and to counter fatigue. They budget their equipment purchases to increase the competitiveness of their station ("should I buy new roofing filters, or build a 4-square for 40?"). Etc., etc., etc.

The ones who do all of this the best end up on the advantaged high ground of the playing field, and the ones who don't do it well end up in the disadvantaged valleys.

Kurt Vonnegut illustrates the folly of "level playing fields" in this short story ----> http://instruct.westvalley.edu/lafave/hb.html

Both of those points were made in the League's last assault on the
problem and those arguments fell on deaf ears. That's when the
Commission made it clear that they will move if and only if The
Congress orders it to.

But ham radio's dirty little secret is that we have let it become "just a hobby". With the exception of 2M most of our VHF/UHF spectrum is shared with "real" users like DoD who tolerate our presence and because they are NTIA (not FCC) controlled are (at least for now) immune to auctions. Our HF spectrum isn't particularly attractive for commercial applications. Were it not for those fortunate circumstances, our allocations would have been auctioned long ago.

My point was that it was not only possible to do FD with tube gear,
but
that it's possible to get decent results using it.

Agree on both counts. But "as simple as possible" has different
meanings
to different folks, and will be a compromise.

> Apart from that, the folks who are writing the rules for these events

But is the "average age" really increasing, compared to the "average
age"
of the US population in general?

Or could it be that the younger hams are too busy working, studying,
and
raising families to go to many ham radio gatherings and be seen?

I disagree, Dee. Many who have no chance of winning still want
reasonable rules,
for a variety of reasons.

> Level playing fields result in "average" operators at "average" stations,
> regulated by rules which stifle competition, not enhance it.

I disagree, Hans.

> Kurt Vonnegut illustrates the folly of "level playing fields" in this sho
rt
> story ---->http://instruct.westvalley.edu/lafave/hb.html

But in that story, it is not the playing field that is leveled. It is
the players who
are.

And there is a difference between technological advantage and skill
advantage.
The true competitor seeks both. And we all benefit, because the
results trickle
down to the rest of us in the form of better rigs and techniques. Plus
for the big guns
to win, they have to work a lot of us little guys.

Suppose, by some folly, a contest sponsor were to place severe
restrictions on the technology used
by contest entrants. I predict that you'd see things like this:

100 W power limit? True competitors would have rigs that delivered
99.999 watts and the lowest-loss
feedlines.

No computer logging? True competitors would invent the best log-and-
dupe sheets ever.

No beams or arrays? True competitors would have the best dipoles and
verticals you ever saw.

Etc.

IOW, the competition would continue, just in a different way. But the average operator would still
not be able to beat the big guns, because the true competitors would still have whatever advantages
were to be had.

In fact the average op with the average station would probably have a lower score, because it would be harder to work others, not easier.

Sure, and considering that the antenna restrictions served to
monopolize access to the cable industry. It is hard to argue that
allowing satellite dishes wasn't a fair and equitable thing to do.

>> All I want is reasonable accommodation

A mile or so from us, there is one of those places. No clotheslines, no
kids stuff in yards, all landscaping must be approved. Almost everything
about your home life is tightly regulated. People who live in a place

that restrictive deserve it.

>> As it stands Iï¿½m left to what ever I can cram into the attic
>> and nothing higher than the top of the roof on my single story
>> ranch.
>
> Well, it's a buyer's market now....

As I peruse through the real estate guides, I'm struck by the number of homes that are available that do not have restrictive covenants. Even the village that I live in does not have ban antennas. So I have a nice woodsey atmosphere, and can do most of the things I want. I wasn't allowed to set up my still to make corn squeezins! hehe

But my point is that if people are looking for a house, there are options. It's also very important to read all that boring stuff. I wonder how many Hams who live in a place that prohibits antennas read the fineprint.

Another tactic is to ask if you can put up an antenna, and if the answer is no, then politely say, "Too bad-see you later!". If the real estate agent loses a few sales for something silly like that, then they will start looking into it.

I agree!

Here are some ideas:

The old vertical as a flagpole. Its a sorry bunch who wouldn't approve a flagpole.

Most multiband verticals can be tilted over with kits sold for that purpose. Maybe that can be hid though the day.

Maybe it's time to install a yard watering sytem. They always increase the value of the house, and elicit pleased smiles from HOA people. Maybe a lot of wire for radials could be installed at the same time....

I have a radial installation method that I can discuss off-list if you are curious.

Couple the radials to either:

That flagpole that the HOA would refuse at risk of being ostracized.

If the house has plastic gutters, run a wire around them. I'm sure that is part of a defrosting system - Really, it could be!

Maybe an antenna that fits in the umbrella holder on your deck or patio. Good candidates for that are simple verticals, or I like Bugcatchers antennas, though they aren't as convenient for band changing.
The trick is to make the setup so that it is easy to set up in the dark.

There are other candidates such as Outbackers. Some folks use Buddipoles put together as a dipole.

In-house antennas are pretty much last on my list.

There is almost always a way.

I don't disagree with you there. The old stuff works, but tube gear
is going the way of the spark gap stuff. (Unless some bright cookie
figures out that there are just some things a tube can do better and
cheaper than solid state stuff.)

Well, I know that I'm busy with those things at 40. Before the FCC
removed the information from the public view, the average age of hams
was on the increase. ARRL membership is getting older I'm told. I
don't think the trend has changed and I don't think that it is just a
function of the increase in your average life expectancy and the
general trends. I think your average ham is older than average Joe on
the street and the distribution of age is skewed towards the high end
for hams by quite a bit.

So perhaps you see the effects of both in contest participation. I
know that I have difficulty getting the HF radios turned on for an
hour or so more than a few times a month and there is no way I can
spend a whole 24 hours doing some contest. I have my hands full with
work, mowing the grass, fixing the cars and being a husband and
father.

[Etc.]

Mind if I play devils advocate here for a minute?

Where is it written that as Licensed Amateur Radio Operators
we have a fair pass to ignore the rules?

What part of "no antennas" in the CC&R you signed do you not
understand?

"But but but, I'm a Ham radio operator!"

I'm sorry, I just keep seeing this same thing over and over
and over and I don't buy it.

(Along with, since I have a license, I don't need a permit to
put up a tower.)

If the area is urban enough. In rural Alberta we don't have a lot of
overlap between repeaters. But it's clearly understood by everyone
that emergency service has complete priority over all other traffic.

In Edmonton, a city of about 1 million yes they do have a repeater
dedicated to ARES without a lot of other chatter on it.

There was also the issue that watching TV in one's home, be it a tiny
studio apartment or a giant estate or anything in between, was a
right of any resident, rental, owner, condo, etc. Nobody wanted to
deny *that* right!

Amateur radio doesn't have the same protections.

> wonder how many Hams who live in a place that prohibits antennas read
> the fineprint.

There are plenty of unrestricted places on the market *now*, because
of
the RE market slump and the mortgage crisis.

But not so long ago, it was a different game. At least around here,
houses
would often be sold the afternoon they went on the market. It was not
unusual for
a house to have multiple offers above the asking price with a
preapproved
mortgage and no conditions on the offer.

In such a market, simply finding out if a place was antenna-restricted
is a real problem.
There are deed restrictions on my 1950-built house (none address
antennas) but to
find them out my RE lawyer had to go to the county courthouse and ask
the right
person for them.

You can only buy a house that is for sale at the time you are looking
to buy. If you
happen to need to move at a time when the market is hot, you're at a
distinct
disadvantage.

> Another tactic is to ask if you can put up an antenna, and if the answer
> is no, then politely say, "Too bad-see you later!". If the real estate
> agent loses a few sales for something silly like that, then they will
> start looking into it.

Yes and no.

For one thing, *NEVER* take a verbal response as binding in such a
situation.
Just because the seller or the agent says "yes" or "we can get that
changed"
does NOT mean there are no restrictions! You and your RE attorney need
to
see the actual documents themselves and go over every word to make
sure
there are no restrictions.

For example, the word "antenna" may not appear anywhere. But there may
be
a restriction that says "No structure may exceed a height of 35
feet" (or whatever). A tower
may be considered a structure in that situation, so if you want a 50
foot tower, you're out
of luck.

Deed covenants and restrictions are usually designed so that they
cannot easily be removed
even if all parties want to remove them. The usual way it works is

that each buyer agrees, when
buying the property, to pass them on to the next buyer. So the seller,
and the seller's agent,
may not have the right to remove them even if s/he wants to!

Once the sale is done and you've moved in, it's too late.

IMHO, one of the biggest mistakes many people make is assuming that
because they've read
the Constitution, they don't need a lawyer for things like buying a
house. In many situations
that's a sure-fire path to problems.

Some other problems:

1) A considerable number of hams today were not hams when they moved
into their current
homes. Antennas weren't an issue when the moved - now they are.

2) Considerations such as cost and location are not the same
everywhere. "Move to the
country" isn't always an option if doing so means one or both spouses'
jobs are going to
be at the end of a long and expensive commute. School district and
access to various
services (like health care) are considerations too.

3) In my limited experience, antenna-restricted properties tend to be
less expensive than
unrestricted ones. This flies in the face of the old "property values"
argument, but it
makes sense when you consider that many restricted places have HOA
fees and such,
and that the restrictions often make doing even simple things
expensive (you have to use
a certain paint, buy exact replacements for fixtures like doors and
windows, and get
approval for *everything*. So if you are on a limited budget (who
isn't?), the restricted
properties may appear to be a better deal for your money.

There are bigger, newer and more modern houses near me that are priced
the same as
the little boxes made of ticky-tacky I and my neighbors live in. But
those houses are
restricted in ways that ours aren't.

> flagpole.

A few years back, a WW2 veteran in his '80s put up a flagpole in his
yard.
Every morning he'd raise Old Glory, every night he'd take it down. He
had
two grandkids on active duty in Iraq. The HOA went after him because
freestanding flagpoles were specifically prohibited in the rules.
Being in
the paper and on TV did not faze them; the rules said no flagpoles and
they
were going to enforce those rules.

I think the WW2 vet moved.

> Most multiband verticals can be tilted over with kits sold for that
> purpose. Maybe that can be hid though the day.

This is a very good idea. While it may not be fun to go outside and
install the antenna before
each operating session, it's a solution.

One homebrew way would be to bury a pipe vertically in the ground and
cut it off at the surface.
A cap would keep debris out when not in use.

The antenna assembly consists of the vertical and a piece of pipe that
will just fit in the
buried pipe. Quick connections to the coax and radial system (both
buried) complete it.

To go on the air, the cap is removed, the antenna assembly raised and
the bottom end put in the hole,
and the connections made.

> If the house has plastic gutters, run a wire around them. I'm sure that

And take down.

However even such solutions may not work in some areas. The Gladys
Kravitz
factor looms large in them.

We don't need to call it anything other than "Amateur Radio". The
person who
gardens/landscapes doesn't use the word "hobby", s/he says "I'm a
gardener"
and that's it.

The amateur artist who paints, sculpts, does pottery, photography,
woodwork or any
of a range of other activities does not use the word "hobby" either.

> I know! It's emergency preparation and training. Now that's sounds
> impressive..

We don't need to sound impressive. All we need to do is not sound
apologetic.
"Just a hobby" sounds self-denigrating to me.

Part 97 does not use the word "hobby". Neither should we.

Consider the following conversations:

Conversation 1

"What's that wire up there?"

"It's my ham radio antenna"

"What's ham radio?"

"It's just a hobby where I talk to other ham radio operators."

"Why would you want to do that? Don't you have a telephone and the internet?"

Conversation 2

"What's that wire up there?"

"It's the antenna for my Amateur Radio station"

"What's Amateur Radio?"

"It's a form of noncommercial radio by which licensed radio operators all over the world communicate with each other using a wide variety of methods and technologies."

Which do you think sounds better to a non-ham?

ear
> is going the way of the spark gap stuff.

No, it isn't. Spark was first abandoned by hams and then outlawed; the whole transition from King Spark to museum or junkpile took less than ten years.

Tube rigs are different. Of course they're a special niche interest, like many other things in amateur radio. But there's a very active community of hams restoring old tube gear and building new ones.

> (Unless some bright cookie
> figures out that there are just some things a tube can do better and
> cheaper than solid state stuff.)

There are, such as RF power amplifiers for HF and low VHF. While it is certainly possible to build the solidstate equivalent of, say, a single-3-500Z HF amplifier, the SS version costs more and is less efficient.

You'll not see new manufactured stuff using tubes for a variety of reasons, but for the homebrewer, experimenter and restorer they are a possibility. In fact, one of the reasons for the high prices of tube gear is the increasing interest in it!

But the main point is that there's an ever-widening variety of options out there for us hams. An amateur running a rig made of pre-WW2 parts can be in QSO with one using the latest SDR lashup, or anything in between. The RF doesn't care.

Exactly. So are many others. Life has changed from
the "Ozzie & Harriet/Leave It To Beaver" days.

>�Before the FCC
> removed the information from the public view, the
> average age of hams was on the increase.

I think there's more to it than that.

First off, AFAIK what really happened is that FCC
has gone through periods when they collected
birthdate date, and others when they did not.

If you look up my call on QRZ.com, you'll see I was
born in 1954. But your birthdate info is not given. Unless
I missed something, that's because when I got my license
the FCC was collecting birthdates and when you got
yours, they weren't.

What that means is that you can still derive "average age"
data from the FCC database, but it will be skewed data
because it only covers hams who were first licensed in
certain times. So it's worse that useless because the
youngest hams won't be counted at all.

>�ARRL membership is getting older I'm told. �I
> don't think the trend has changed and I don't think that it is just a
> function of the increase in your average life expectancy and the
> general trends.

But how do we really know? Does ARRL keep birthdate info on all
members?

>�I think your average ham is older than average Joe on
> the street and the distribution of age is skewed towards the high
> end for hams by quite a bit.

But without hard data we don't really know.

I do know that from 1990 to 2000 the median age of US residents in the census rose almost 5 years, from 34 years and some months to 39 years and some months. So the median American today is probably over 40 years old.

But there are very few hams under the age of 10 or 12, so the median age of US hams should be quite a bit older than the median age of the US population. So a median age of hams in their 50s or older, and a rising number, is not out of whack with what's going on with the US population.

> So perhaps you see the effects of both in contest participation. ?
?I
> know that I have difficulty getting the HF radios turned on for an

Sure. But contest participation doesn't have to be for the full period.

>?I have my hands full with
> work, mowing the grass, fixing the cars and being a husband and
> father.

Which is why hams in your age bracket, and mine, are so much less visible.

And wailing and knashing of teeth would still be heard throughout the "Land of Average".

"Average operators" (those who voted for Diana Moon Glompers) would cry "unfair".

Let's just take one real-life example, not a strained speculation. SO2R (SingleOp2Radio operating style) is a developed skill (not a technology). It takes work to perfect, but once mastered it dramatically tilts the field in favor the operator who uses it. Join the CQ-Contest email reflector, and mention you'll be operating "SO2R" in SS CW next November. The "average operators who want rules to level the field" will rise up bemoaning the "unfairness of it all" and "there ought to be a rule".

If radiosport contesting (the last great hope of saving ham radio, IMNSHO) is to live up to it's potential to advance the state of the radio art, then we need to structure contest rules which encourage and nurture skill and technology developers, and do not reward "average" operators or "average" stations.

Here's an example:

My high school was involved in a competition known then as
"Mathletes", where we'd compete against teams from other schools in
solving math problems.

IMHO there was never a more level playing field, because all
competitors got the same problems, the same amount of time and had the
same resources.

In my senior year we had so many students who wanted to compete and
who met the requirements that my school fielded two independent teams,
"A" and "B". This was not unusual; other schools did the same thing.

The overall City championship was determined by the season points
total of a given team - highest scoring team got first place, second
highest got second place, etc. The top two positions were the big ones
to win.

But at the end of the last meet, our A team had the highest season
points score, and the B team had the second highest. Two winning teams
from the same school had never happened before, and the officials were
somewhat unsure of what to do.

So after some deliberation they gave the first place trophy jointly to
the A and B team from my school, and the second place trophy to the
third place team. Their reasoning was that they didn't want the rest
of the teams to feel bad - that it somehow wasn't "good" for one
school to walk off with both trophies.

All of us on both the A and B teams learned a lesson that day. I don't
think it was the lesson the officials wanted us to learn, though.

There would probably be complaints that it
was unfair that the big guns used expensive low-loss feedlines,
for example, to get a tiny advantage of signal strength.

> Let's just take one real-life example, not a strained
> speculation.

Actually, I don't think it's strained. I've had conversations with
hams who felt that the big guns should be limited in all sorts of
ways, from power to antennas to automation. My point is that even if
those limits
were imposed, there would be stations and operators whose performance
was outstanding.

> SO2R
> (SingleOp2Radio operating style) is a developed skill (not a

I'd say it's both. Not that it really matters.

I don't see how SO2R is "unfair" in any way. IIRC, the SS rules
permit as many bandchanges and frequency changes as one

desires, but a station can only transmit one signal at any time.

So all that SO2R, or SO3R or SOxR does is make it possible to change band/frequency really really fast. It could be implemented with 1930s technology if somebody really wanted to.

Some of the concepts of SO2R can even be implemented with one rig. Should that be outlawed too?

There will always be folks with advantages. If nothing else, the person who doesn't have a job or family responsibilities will have an advantage over the person who does. So what?

I think that is easily done by having various categories. As I have said before, don't outlaw "Skimmer", but don't put it in the same category as the "boy and his radio" stations.

I think it's a bit of hyperbole to describe contesting as "the last great hope of saving ham radio". OTOH, I think being able to offer a competitive sport kind of activity is a big selling point for amateur radio. What would distance running or bicycling be like if there were no marathons, 10Ks or bike races? I suspect those things would be greatly diminished and less popular, even though most runners and cyclists will never win a race.

I'm no more than an "average" operator with a somewhat unusual station. Long ago I realized that unless I won the lottery, I'd probably never "win" any radio contest.

So for me the competition is really against myself. Can I do better than before? Are there improvements I can make to my modest station to get a higher score? How much can be done with the limited resources I do have?

The results have been gratifying and a lot of fun.

I think that in most cases, the Ham didn't read the fine print, or they
might not have been a Ham when they bought the house.

I've been a long term advocate of knowing what you are getting into. I'm
one of thos insufferable geeks that irritate the lawyers and other
people present by reading over the fine print. I'm a quick reader though
- it is 5 to 10 minutes well spent. I even read equipment manuals,
heheh.

I wouldn't buy a house in a neighborhood that wouldn't allow mw to put
up an antenna.

But I know that not everyone is so careful - and I don't think that they
should be punished forever. I think that the fight to give them access
to the airwaves is a good fight.

All that being said, who would want to live in those neighborhoods
anyway? All we have to do is keep the grass cut, the house in good
repair, and no junk cars sitting around. And our neighborhood is a
showpiece. My antennas notwithstanding.

> (Along with, since I have a license, I don't need a permit to
> put up a tower.)

Well now there is a different kettle of fish. A tower can be a major liability. We can have them here, but they must be approved by an engineer. And I agree with that, even if they take the arbitrary "100 percent height fall radius circle". I don't know if any tower has fallen that way.

At least I wouldn't have to fight the township just to put one up.

I can't make too many excuses for those who are in large part
responsible for the terrible mess we are in today.

When we bought our house, we told the RE agent what we were going to
pay, what we were going to accept, and what we weren't. Given that we
planned on buying a house for about 60 percent of the Max amount that the
bank would loan us, the Real Estate people were always trying to push us up
into a higher price range. We fired 2 agents before we landed a good one.

The rest we invested very conservatively. And the real estate agents
and many friends condsidered me an idiot - until recently

> In such a market, simply finding out if a place was antenna-restricted
> is a real problem. There are deed restrictions on my 1950-built house
(none address antennas) but to find them out my RE lawyer had to go to the
county courthouse and ask the right person for them.

Yup, that's what you have to do
>
> You can only buy a house that is for sale at the time you are looking

>you're at a distinct disadvantage.

A sound piece of financial advice is never ever buy a house under duress! Liv in an apartment or rental house for a while if need be, but never buy because you think you have to. There will be a lot of time to repent at leisure.

For me it is pretty simple. I don't buy unless the glove fits my hand. If I want to put up an antenna, I'm going to make sure that I can.

I'd have to respectfully say that too many people seem to think that they have to buy the house, whatever is offered. I walked away from several houses when I was looking. It isn't my responsibility to buy the house.

> Once the sale is done and you've moved in, it's too late.

As a counterpoint, in the central PA area, if your not an academic or well
heeled staff, you can't afford to live near the city. Probably 60 percent
of the people who work here don't live here. It's a well known problem that
we don't have what is called "affordable housing".

That is how I mount my Vertical. I don't have to take it down, but it is
convenient for tuning the antenna, which has to be don every so often.

Did you see the videos about the housing development where some neighbors were complaining about the fellow who had a Steppir beam on a nice tower? Turned out in that development they couldn't do a thing about it.

Personally the antenna and tower was a thing of beauty AFAIAC, certainly more attractive than those who were complaining about it. Nice house, nice yard, nice antenna. If you didn't see it, I'll try to find the link.

It is routinely implemented with no "technology" any more complex than SO1R,
unless you call split headphones a "technology". Pure and simple, it's a human
skill.

And it's nothing new either. The first generally accepted "serious" use of SO2R
was 56 years ago by W4KFC in the 1952 SS CW contest.

I suspect that this is actually an illustration that all the competitors did not really have the same resources. How much influence did your coach have in how well the team did? Some of the teams were probably coached by a teacher who was pressed into the position and had neither the ability nor motivation to push the team to be competitive, while I bet your coach was excellent.

Native ability is just part of the puzzle. Unless the opportunity and motivation is there to develop the skill, nothing will ever come of it.

> the RE market slump and the mortgage crisis.

Maybe in your area, but where I live CC&R's are the rule and they will all pretty much restrict antennas for ham radio use. It all depends on when the average house was built in your area. The standard way this works here in the Dallas area is developer buys large tract of land, applies CC&R's to the tract, subdivides and develops the land to sell the houses he builds. He throws in a pool and play ground across from the model homes which is owned by the HOA that gets created by the CC&R's. 99-100% of the new homes available in the area I live will come with CC&R's based on these boilerplates. (Personally I know of NO new homes in my current price range for sale with 10 miles of my house that won't have CC&R's.)

I've seen only ONE subdivision in my area that would have allowed antennas in their CC&R's but it was a very special case. The CC&R's didn't originate with a builder, but where adopted by the land owners AFTER the subdivision was plated. Those CC&R's where a model of simplicity and basically dealt with keeping unsightly things to a minimum. (Keep your house painted a normal color and in good repair, no junk cars, lawns mowed, fences in good repair etc.)

The problem is that the big builders have boiler plate CC&R's that change very little between subdivisions. All of these boiler plates contain restrictions on antennas and are constructed to never expire. More and more land is becoming off limits to ham radio antennas and this is a bigger problem in areas that have been under active development for the last 20-30 years such as Dallas.

Therefore I have to object to the "just move" response to the plight of hams in CC&R communities. It may be an option for some, but for others it may not. At some point I may choose to move, and CC&R restrictions on antennas will likely be something I look at. I can tell you that I won't be able to buy a comparable house for the same money without CC&R's in Murphy or the surrounding area. There are areas that allow them, but they do not compare with where I live in price or age. Yes, I could drive 40 more miles a day and perhaps find something that would work, but with the cost of driving these days Iï¿½d be moving into less of a house for sure to make ends meet.

In addition to this, all the CC&R's I've read in my area are usually drafted to NEVER expire. The only way they will go away is if all the land owners agree to it (fat chance of that). This land will forever be of limits for antennas. Year after year as new subdivisions are built, more and more land will be CC&R's restricted unless they are limited by law.

As an aside on CC&R's which are all the rage... There are fundamental problems with CC&R's and pesky HOA's under the current law. Depending on how they are drafted, they can end up causing some seemingly very unreasonable consequences for homeowners that may not be obvious by reading them. Personally, I think they should be put under some really strict legal limits and the powers of HOA's strictly limited. But all that is another issue...

All in all I can only hope that this CC&R Craze comes to an end pretty soon. I don't think they are as much a benifit to landowners as they are thought to be. But until they fall out of favor to the public or get pre-empted by law they will only increase in coverage.

Personally, that scares me.

None, we didn't have a coach. We had a faculty moderator, whose job it
was
to see that we got to the meets and behaved ourselves.

> Some of the teams were probably
> coached by a teacher who was pressed into the position and had neither
> the ability nor motivation to push the team to be competitive, while I
> bet your coach was excellent.

He was excellent in that he made sure we knew when the meets were and
how we'd get there. The rest was up to us.

We won because *we* had ability and motivation, not because we were
pushed.

> Native ability is just part of the puzzle. Unless the opportunity and
> motivation is there to develop the skill, nothing will ever come of it.

The opportunity was that the Mathletes competition existed. The
motivation was our own; that we knew we were good and wanted to prove
it. And we did, even if the Diana Moon Glompers clones in charge
denied the B team their trophy.

As for amateur radio contesting, what motivates the big guns? Their
achievements are only appreciated by a few; amateur radiosport is
generally not a spectator thing. Nor will they be paid.

And while they are intensely competitive, (google "Barracuda Rules"),
nothing the big guns do to win remains a secret for very long. Take
computer logging - it started as a very expensive and complex

alternative to paper, but now there are all sorts of logging software packages that are free or of nominal cost, and which will run on computers so old they are dumpster fodder. What could be fairer than that? Yet I recall folks years ago who said it was unfair that the big guns had computer logging.

All of what you wrote applies to housing here in Tucson. Seems that only if you're a multi-millionaire can you buy land (if there's any left) and build your own custom home... completely outside of restrictions (other than towers, etc.)

I live in one of these CC&R developments, and I'm fortunate to be able to have something of an antenna in my backyard: an MFJ Hi-Q 10-30m Loop on a 5' pole. While it's VERY visible from the street (and is quite an effective antenna), over the 10+ years I've lived here no one's said a word. The CC&R's state "no antennas without permission." I never asked. That statement was written, BTW, before the FCC demanded the allowance of tv antennas and satellite dishes.

When guests ask what my [MFJ antenna] is, I tell them it's my yard sculpture. I'm fortunate to be under an HOA that's more relaxed than a lot of the others I've heard about.

I can find a lot of houses in this area that don't allow much of anything too. I'd respectfully suggest that people might look a little harder based on the fact that a whole lot of people in this area believe that even my neighborhood will not allow antennas, and don't believe me when I tell them it does.

If it is true that there is no land available in either Dallas or Tucson that would allow antennas, then that is indeed sad. I simply would not live there.

Amateur Radio Newsline(tm) Report 1614 - July 18, 2008

Ladies and gentlemen. With some more thank you's to the listeners who help keep Amateur Radio Newsline in operation, here's our Support Fund Administrator Andy Jarema, N6TCQ;

--

Last year in February we heard from The Montgomery ARC of Gaithersburg, MD: The Hamfesters Radio Club, W9AA of Bedford Park, IL; James Weir, K6QGN and Evelyn Weir, K6QXC; John Rice, KE6YFV of San Pedro California and our regular contributors Benton, W4PE, Joseph, KC8DKF, William WA2IBM and Scott in San Jose.

Via PayPal there were Terry Moore in Lancashire, Earby, Lancashire and David Ellison in Richmond, North Yorkshire, both in the UK; Mark Braunstein in Certreville, VA; Michael Finkbone in Deland FL;
James Deneen in Whitmore Lake, MI; Joseph Kratky in Hickory Hills, IL; Charles Hailbronner, Colorado Springs CO. and Paul Cote, K6PFC in San Diego, CA.

PayPal makes it easy to keep these newscasts on the air, and as you've just heard, they take care of any currency conversion needed. So if you're outside the US, we'd love to hear from you. Be sure and include your callsign info in the memo portion of the form. Or via our regular address, which will be given later.
Listen for these thank-you's in future broadcasts.

I'm Andy Jarema, N6TCQ at our studios in Hollywood.

--

Thank you Andy. Now, Amateur Radio Newsline report number 1614 with a release date of Friday, July 18th, 2008 to follow in 5-4-3-2-1.

**

The following is a QST. A Pennsylvania ham faces a different kind of tower fight, the ARRL and Newsline have their e-mail addresses spoofed by Internet bad guys, an essay says that ham radio is disappearing and QRP operation is on the march down-under. Find out the details on Amateur Radio Newsline(tm) report number 1614 coming your way right now.

LEGAL ISSUES: PENN TOWNSHIP RESCINDS ANTENNA PERMIT TO PITTSBURG AREA HAM

A tower case with a twist. This after a Pennsylvania zoning hearing board sides with neighbors who want the ham's tower totally screened from view or taken down. But the battle over the 53-foot tower could end up in federal court because the tower had already been granted a permit and has been up for some time. Amateur Radio Newsline's Mark Abramowicz, NT3V, sorts it all out:

--

Chuck Mills W3YNI, lives in the town of Irwin, Pennsylvania, about 30 miles east of Pittsburgh.

Mills, an assistant Emergency Coordinator for Westmoreland County's ARES group, had been using a Cushcraft A-3 tribander on a roof-mounted tower on his property for about nine years.

Last fall, Mills says he acquired a tilt-over, crank-up tower on which he planned to put an antenna array.

But Mills says he never got the chance because he got a visit from the township zoning officer who had been summoned by neighbors who didn't like the idea of a tower going up in their development.

Mills says he applied for a permit as instructed by the zoning officer and then was told he'd have to put up trees or something else to screen the tower.

He says his neighbors never bothered to directly express their concerns.

"They didn't talk to me first," Mills says. "They simply called the township and demanded that it be taken down.
"The township, of course, really can't take sides. They have to interpret and enforce the law. In their mind, they were more or less saying that he does have a right to do what he wants on his property within reason. And this would be within reason."

After months of wrangling, the township finally granted Mills the permit and said two trees he had planted would be sufficient to meet the screening requirements.

But that didn't sit well with the neighbors, who appealed to the zoning hearing board.

"They really would not accept any kind of compromise because the township tried to mediate the situation," Mills says. "The only thing that they would accept is that the tower would be taken down."

On July 10, the zoning board ruled the township shouldn't have granted Mills the permit for his tower in the first place saying it didn't follow through on site plan and proper screening of the structure.

Mills predicts the decision won't stand.

"In order to deny me the permit, they have to have a legally valid reason," Mills says. "They can't just deny it because somebody doesn't like it or they don't like it. That goes against PRB 1. That's pretty clear.

"The reason my permit, they ruled against me, was a technicality in the permitting process that the township improperly granted the permit."

Mills says there's also an ironic part to this whole saga so far.

"At the present time, I have no antenna on top of it," Mills says. "These proceedings have kind of retarded the process of getting an antenna on top of it because I seem to spend a lot of time speaking to my attorney."

Mills is being represented by Michael Lazaroff, K3AIR, a volunteer legal counsel for the American Radio Relay League.

"I can assure you that we're either going to appeal this to the next higher court or we're going to try to remedy it through the township to get a permit that will be able to stand," Mills says.

And, Mills says, he's gratified by the support he's been getting from hams in his community and across the country via message boards on the internet and email.

Mills says he was also surprised by the groundswell of support from an unexpected corner.

"Surprisingly, support from the community at large has been - even non-hams - has been very, very strong," Mills says. "Because, you know there's a lot of people who don't see this as about a tower issue and my hobby issue but see it as a property rights issue.

"And, a surprising number of people feel that you know this is a case of being told what to do on your own land which a lot of people see as appropriate."

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

This appears to be an tower and antenna case that may be with us for some time and we keep watching it in future, Amateur radio Newsline reports. (ARNewsline(tm))

THOUGHT PROVOKING ESSAY: 25 THINGS VANISHING FROM AMERICA: HAM RADIO IS #16

Ham radio is one of the top 25 things vanishing from America. In fact its number 16 according to author Tom Barlow, N8NLO, in his opinion piece on the walletpop dot com blogging website.

In his July 17th article, Tom Barlow says that an easy way to prolong a disaster is to have the respondents use dozens of different, incompatible communications systems, or operate them with no protocol as was the case during Hurricane Katrina. He also laments about what he calls

the vanishing American treasure of the amateur radio operator.

According to N8NLO, over the past five years alone, the number of people holding active licenses has dropped by 50,000. This, even though passing a Morse code exam is not longer a requirement to obtain a license.

And while some might take issue with that 50,000 figure and others will provide other numbers to prove ham radio is growing Barlow says that somerthing else is far more important. That being the tradition that hams have always been there to volunteer. He says that he knows them to be among our nation's best trained and most capable respondents in time of disaster.

Barlow concludes by saying that when amateur radio as we know it disappears, it won't be the radios we'll miss. We'll miss the operators.

This walletdrop dot com series "25 Things Vanishing From America" explores aspects of our nation that may soon be just a memory. And whether or not you agree with what he says you can read the complete Tom Barlow article about ham radios possible disappearance on-line at www.walletpop.com/2008/07/17/top-25-things-vanishing-from-america-16-ham-radio/
(walletdrop.com)

RADIO SCAMS: E-MAILS ASKING PERSONAL INFO ARE NOT FROM THE ARRL OR ARNEWSLINE

Both Amateur Radio Newsline and the American Radio Relay League appears to have had our e-mail addresses spoofed once again. Spoofing is a method that criminals on the Internet use to get you to reveal your personal information to them by pretending to be someone or something else. Maybe a bank, a credit company or even a person you know and trust. The information request itself is called phishing. It's the Internet version of throwing out an offer and hoping that some sucker will respond.

In our case, last week we began receiving bounced e-mails with our e-mail address a the sender. The messages asked people to click a link and provide information so that they would be eligible for a prize. If you got one, don't click on it. Just delete it. It was a phishing expedition but we cannot tell you what was on the click to website. We never looked at it because our web browser Firefox warned that it was an infected site and never let us get there.

If you did go there, we suggest that you run your ant-virus and anti-spyware software so as to be sure your computer was not infected with some malicious mal-ware or spyware.

Meantime the ARRL reports on its website that it has received several notes from members with arrl.net e-mail accounts who have also recently been contacted via e-mail asking for personal information. The ARRL says that these the e-mails requested personal information such as user names

and passwords.

The League says that these e-mails are fraudulent attempts at "phishing" and did not originate from ARRL. It says that there is never a time when it would ask via mass e-mail for user names and passwords of arrl.net users.

The bottom line: If you receive an e-mail asking for personal information and it looks like it originated from Amateur Radio Newsline or from the ARRL, please do not respond or click a link. Just delete it. Your bank account and you will both be a lot happier that way. (ARNewsline(tm), ARRL)

RESTRUCTURING: UK FOOUNDATION LICENSE FACE LIFT

The very popular United Kingdom Foundation class and the Intermediate class licenses are getting a first makeover. Jeramy Boot, G4NJH, is in Nottingham, England, and has the details:

--

A new version of both the Foundation and Intermediate syllabus have been released, which will take effect from 1st June 2009.

Additional material will be added to both the Foundation and Intermediate course. From that date, the Foundation will additionally cover conductors and insulators but the major change is to the Intermediate exam.

It will now cover some material previously in Advanced, such as alternating currents and voltages. This will significantly increase the technical level of the Intermediate exam.

I'm Jeramy Boot, G4NJH.

--

The new schedule of questions and training materials will not apply until 1st June 2009 so any exams held before then will still use the current syllabus. (GB2RS)

**

RADIO SAFETY: HAM AND SON ELECTROCUTED IN KC

Back in the United States comes word of a tragedy. Two men identified as Edward Thomas, KC0TIG, of Kansas City, Kansas, and his son Jacob were electrocuted Sunday July 13th after the ham radio antenna they were installing came into contact with overhead high voltage electrical service.

Neighbors of the victims called emergency crews for help, but the father was dead when they arrived. The younger man passed away after arriving at a hospital. No one else was hurt

According to an Internet poting by Chuck Kraly, K0XM, the parties involved, were installing a mostly fiberglass Comet antenna that came in contact with a single 7,620V power line. Kraly says that he is well familiar with electrical power service in that part of the city as he is the technician that built and maintained the substation that fed the circuit.

K0XM notes that the wires you see going through the residential areas are at a minimum 7200 volts from each wire to ground, and between any two of them is 13,800 volts. He says that he has seen a fault totally vaporize a 1" solid copper buss wire. He also notes rhetorically: "Imagine what it can do to a human." (KMBC News on-line, N0UF, N0IRS, QRZ.com, others)

**

RESCUE RADIO: FCC TO HOST PANDEMIC PREPAREDNESS SUMMIT

The Federal Communications Commission's Public Safety and Homeland Security
Bureau says it will host a summit on pandemic emergency preparedness from 9 a.m. to 1:15 p.m. on September 16th. Titled "Enhancing Communications Response for Health Care and First Responders," the meeting will focus on communications and coordination among the health care sector, first responders, government and industry in preparation for a pandemic type event.

A panel discussions will highlight ways that communications may be expanded and enhanced in response to a pandemic. It will also cover methods of how the communications industry will serve an instrumental role in such a response.

The summit will be open to the public, though admittance is limited to the seating available. You can pre-register online at www.fcc.gov. The deadline for pre-registration is September 12th. (FCC)

**

ENFORCEMENT: ND RADIO STATION FINED FOR AIRING PHONECALL

The FCC has issued a $12,000 fine against radio station giant Clear Channel Communications. This, for an incident on KFGO- AM in Fargo, North Dakota, in 2006 where the Commission claims the station broadcast a phone conversation without first informing the caller of its intention to do so.

The action is in response to a complaint by a listener named Sandy Blunt. Blunt is identified as a former state agency official. The audio was from a voicemail he had left on the private cell phone of one of the station's

hosts named Joel Heitkamp who is a former North Dakota state senator.

Heitkamp said he believed the message to be an open record because Blunt was a public figure, he knew he was being recorded.. He claims that the call came to Heitkamp's work phone, not a private cell phone as the FCC reported.

But the commission says that its Enforcement Bureau had previously ruled that an outgoing personal answering machine message is a "conversation" for
purposes of the rules. As such, nonconsensual broadcast of a conversation from an answering machine recording is a definite violation of the agency's rules. (FCC)

**

RADIO HAPPENINGS: CB IS ALIVE - WELL AND GROWING AGAIN

If Canadian writer Jeffrey Reed was a Monty Python fan, he might have written a lead line 11 meter C-B radio isn't dead yet, its just been resting. Instead, his in-depth article on the resurgence of 11 meters appearing in the July issue of Popular Communications takes an in depth look at why the once popular form of communications is suddenly making a comeback among the driving public.

Reed, who did quite a bit of research for his article titled "Ready to Roll With CB Radio" says that anyone who believes that Citizens Band Radio has gone the way of the Dodo bird really needs to think again. He says that the spectrum of legal C-B operations from 26.695 to 27.404 MHz is truly alive, well and living in your neighborhood.

Reed contends that unlike the C-B culture of the 1970's that was fueled by movies such as Smokey and the Bandit, that the C-B operations of 2008 bring with it a more mature mode of communicating. He notes that even with all of the latest in high-tech on the go communications that most professional drivers still have simple C-B serts mounted in their trucks that they use for daily on the road communications.

Jeffrey Reed's article deals only with legal in-nband C-B. It also dispels many myths about 11 meter operation and highlights some of the legal gear that's available in todays 11 meter marketplace. "Ready to Roll With CB Radio" is a good read and begins on page 16 of the July issue of Popular Communications magazine. (Popcomm)

**

NAMES IN THE NEWS: CHANGE OF COMMAND AT COMMAND TECHNOLOGIES

Some names in the news. First is Daniel Simmonds, KK3AN of Somerset, Pennsylvania. He has been chosen to continue operations of amplifier manufacturer Command Technologies following the retirement of company founder Patrick Stein, N8BRA.

Simmonds is 32 and has been a licensed Amateur Radio operator since 1990. He is currently active on all HF bands from 160 to 10 meters.

As part of the changeover the Edon, Ohio based company will soom move to a larger facility in Somerset, Pennsylvania. Stein who began Command Technologies back in 1978 says that he will stay very close to the company's internal operations for the next several months during the move. He will also remain available for customer contact through this period. (Command Technologies)

**

NANES IN THE NEWS: JOHN LINFORD G3WGV NEW PRESIDENT OF SOTA

John Linford, G3WGV has been named the new President of the United Kingdom-based Summits on the Air or SOTA program. Linford is actually the inventor and founder of the Summits on the Air program. He and Richard Newsted, G3CWI, developed the original set of rules which are largely unchanged to the present day. They pair launched Summits on the Air on March 2nd 2002. (GB2RS)

**

HAM RADIO ON VIDEO: TODAYS PEOPLE PASTED TO YOUTUBE

Another ham radio video has been added to YouTube dot com, and this one has a rather interesting history.

Back in the late 1980's almost all the ham radio documentary and promotional videos were produced by the trio of Frosty Oden, N6ENV, Bill Pasternak, WA6ITF and the late Roy Neal, K6DUE. The three would regularly toss ideas to one another. One of Bill's was a weekly cable television show aimed at 12 to 18 year olds that had a teenage host interviewing hams who had gained some level of fame.

To see if it could work a show pilot was produced. It was called Today's People and was hosted by then 18 year old Kelly Howard, N6PNY. Howard previously co-hosted the ARRL's "The New World of Amateur Radio" with K6DUE. The person she interviewed was the late Senator Barry M. Goldwater, K7UGA.

Unfortunately, the show was never sold into syndication and the master tape of the 7 minute pilot was lost. That is it was lost until the other day to when Bill was cleaning up a closet and found a VHS copy of the show. Not wanting it to be lost forever he converted it to a D-V-D and then got the idea of putting it up on the YouTube bot com video sharing website. If you want to see it and maybe get a bit of inight into the late senator Barry M. Goldwater, K7UGA, the video is there now at www.youtube.com/watch?v=5Jss9FYmzq8

And less we forget. We don't know why the audio on YouTube sounds a bit compressed. On the VHS tape and the upload file made from the tape it sounds fine. (ARNewsline(tm))

**

HAM RADIO ON VIDEO: OSCAR 10 AND OSCAR 13

And from Germany comes word that Peter Gï¿½lzow, DB2OS has uploaded full-length videos about the integration and launch of OSCAR-10 and OSCAR-13 to a video sharing website. Also placed on-line was a video from the Software Defined Transponder demonstration from the recent HamRadio 2008 convention held in Friedrichshafen. Both are at http://en.sevenload.com/search/amsat/videos (AMSAT DL)

COMMUNICATIONS RESEARCH: NBC TO USE OLYMPICS AS A MEDIA LAB

The NBC television network will be using the 2008 Summer Olympic gamess as a research laboratory. This, to get a sense of how people are using different media platforms to experience the Beijing Games that begin August 8th.

NBC has scheduled 3,600 hours of Olympics programming on its main network, along with Telemundo, USA, Oxygen, MSNBC, CNBC and Bravo. That's the equivalent of eight days of programming packed into each day. In addition, the company is planning to make 2,200 hours of streaming video available on NBCOlympics.com. Consumers may also get video on demand via their computer and Olympics content through their mobile phones.

NBC hopes its research provides a comprehensive picture of how people are supplementing TV viewership with tools such as video streaming, video on demand and mobile phones. (RW)

**

HAM RADIO IN SPACE: AO-51 POWER DOWN A BIT

In ham radio space related news, AMSAT says that he transmitter power on its AO 51 ham radio satellite has been down lately. This, due to the length of eclipse that peaked about 2 weeks ago.

According to AO-51 command station Gould Smith, WA4SXM, in Knoxville, Tennessee, the eclipse periods will continue to get shorter until September. That's when the satellite will be in full sunlight with no eclipse period for about 8 months.

WA4SXM says at present AO-51 is operating at 430 milliwatts on its digital downlink and T at 470 milliwatts on its analog downlink. During the peak of the eclipse periods both transmitters were operating only in the 340 milliwatt range. (AMSAT)

**

ON THE AIR: THE OHIO STATE PARKS CONTEST IN SEPTEMBER

On the air, the Portage County Amateur Radio Service announces the first Ohio State Parks On The Air Contest to be held on Saturday, September 6th from 1600 UTC to 2400 UTC. This contest places a premium on working stations at Ohio State Parks. That means that it is critical to have as many parks activated as possible.

The challenge for Ohio stations will be to work HF in the 50 to 300 mile range. Contacts can be made with any mode on the HF and VHF bands. Complete information, some frequently asked quests along with answers and forms can be found at parks.portcars.org. (Portage ARC)

WORLDBEAT - SOUTH AFRICA: STUDY GRANTS FOR COLLEGE AGE HAMA

Turning to news from across the globe, the South African Amateur Radio Development Trust is introducing an annual study grant program. This, for young licensed radio amateurs who wish to enter a University or University of Technology to study electronics and communication.

The study grant will contribute a specific level of funding towards the students first year of study. The aim of the project is to encourage young radio amateurs to enter careers in communication and electronics. (SARL, Southgate)

**

WOLDBEAT: NEW BROCHURE FROM THE SARL

We also have word of a new brochure explaining ham radio being made available on the World Wide Web courtesy of the South African Radio League. The four page handout takes the reader into the historic aspect of the hobby and then explains where ham radio is today and where its headed in the near future. It also demonstrates just how to get a license and what a person can do on the air once he or she has passed a licensing exam.

The brochure is in full color and has been formatted as a P-D-F file for easy printing. While intended for a South African audience, it could easily be modified to fit almost any nations ham radio recruiting needs. You will find it ready to be download at www dot sarl dot org dot za. (Southgate)

**

HAM HAPPENINGS: QRP ON THE MARCH

A group of Australian hams are about to take a walk in the Southern hemispheres winter. They do it every year and will be spending nearly a week far from civilization, camping in the snow with only amateur radio to keep in touch with the outside world. Jim Linton, VK3PC has more:

--

Three radio amateurs and a number of friends are making final plans for their annual cross country skiing in the wilderness of the Bogong High Plains in north-east Victoria.

They are to spend the 30th of July to the 4th of August camping in the snow, and during rest periods play amateur radio.

Matt VK3HFI, Gerard VK3JPA and Stephen VK3SN will use several repeaters in VK1, VK2 and VK3 as well as 160-metres through to 20-metres in the afternoons and evenings.

Their QRP stations, powered by solar panels and batteries will radiate from simple wire antennas, plus hand-held VHF/UHF transceivers. Listen for the trio and give them a call.

I'm Jim Linton VK3PC and you're listening to trhe Amateur Radio Newsline.

--

Listen out for the group mainly when its dusk and nighttime, in Australia. (WIA News)

DX

In DX, word that PA5M is now active from Tomor Leste as 4W6AAB for about 5 weeks. His activity will be limited to his spare time using only a 100 watts and a vertical. He has been heard on 20 meters around 14.047 MHz between 0530-0615 U-T-C. His QSL Manager is PA7FM.

JA2IVK will be active from the Maldives as 8Q7SH between July 18th and the 20th on 80 through 10 meters. He will be using only CW and SSB using 100 watts to a vertical. QSL via JA2IVK, via the bureau or direct to his QRZ.com address.

DL5XX, will be on a business trip in Ghana and plansto be active during his free time as 9G5MM between July 15th and August 10th. Hi opeation will be on all bands using only CW. QSL via DL5XX.

Lastly, DO7ZZ will once again be active from Croatia operating VE3ZIK portable 9A. This, between July 23rd and August 23rd. Activity will be on the HF bands only, using CW, SSB, RTTY, PSK31, PSK63 and 10m FM. There is a chance to be active for one day operation portable E7 from Bosnia-Herzegovina. QSL via DO7ZZ via the bureau

(Above from OPDX and other DX News sources)

THAT FINAL ITEM: A SALUTE TO ISRAEL HAM RADIO GROUP

And finally, our story of a few weeks ago on ham radio support for the 2008 New York City Salute to Israel Parade has brought in a lot of mail, a lot of e-mail and even a bit of controversy. Bill Pasternak, WA6ITF, who worked on that event and others like it in the 1960's tries to clear it all up:

--

When you sit down to write stories as I do every week, there's no way to know where one of these might take you. Or where it might take those who might be listening in when a newscast goes to air.

Our story a few weeks ago about the hams who provide communications support to this years New York City Salute to Israel Parade seems to have been one of those rather special ones. A story that has taken on a life of its own and one that has taken some radio amateurs on a trip through time.

First off, what it did was to bring Newsline together with a group of hams who had served with the parade in years past. Some of them had long ago moved away from the Big Apple and were no longer aware that volunteer ham radio support was still continuing more than four decades after the first march.

One of the first things that we learned was that in the first parade in 1964 that organizers tried using 11 meter C-B. They requested or were offered the assistance of the now defunct Manhattan CB Radio Association. It did not work out very well and by 1965 it became primarily a ham radio only event.

There seems to be a bit of disagreement as to who did what during the earliest of the ham radio years. Thanks to some excellent archiving by past Dayton Radio Amateur of the Year Andy Feldman, WB2FXN, there is proof positive that from 1967 on, communications for the parade became a formal ham organization. One that Feldman co-chaired for several years with the

late Louis Belsky, K2VMR.

Before that there's nothing on paper. Just one photo dated from July 1966 and some amateur radio folk lore to show that hams were involved.

And if you think that's complex, how about this.. A RACES group from the borough of the Bronx, also contacted us with proof from QST Magazine that they were also a communications provider to the parade in 1967. This at a time when the official parade program listed only the ham radio group headed up by the Brooklyn-based WB2FXN and K2VMR.

But there is a much brighter side. The story seems to have lead to a lot of folks who had a common interest in providing volunteer radio communications for the Salute to Israel Parade to get to know one another. 40 years is a long time yet our story seems to have bridged the years. As a result there is a brand new remailer on Yahoogroups reflector for those who have in the past been communications volunteers to the New York City Salute to Israel Parade. Its billed as a place for them to meet on-line and discuss their experiences.

If you are a Salute To Israel Parade ham radio alumni communicator, and if you are interested in joining this remailer, please send an e-mail to STIParade@yahoo.com. In the body of your note give your full name, your callsign and the years that you were a ham radio volunteer to the event. The administrator will end back an e-mail with a formal invitation to join. And we hope it brings you a lot of joy.

For the Amateur Radio Newsline, I'm Bill Pasternak, in the 1960's as WA2HVK and now WA6ITF, in the studio in Los Angeles.

--

Again, that e-mail address for amateur radio alumni of New York City's Salute to Israel Parade to join the remailer is STIParade@Yahoo.com. The list administrators say that they hope to see you on board. (ARNewsline(tm))

Mike, there is land and housing in Tucson that allows antennas, but in general, as far as I know either you have to be "out in the county," or in an older, very established neighborhood. That seems to be "in general," as I'm sure there are exceptions. But if you want a new, modest home in a typical family-oriented subdivision, it is not at all likely you'll find one that allows antennas. If you've "got money," then your options are greater.

==> ARRL BOARD OF DIRECTORS MEETS JULY 18-19 IN CONNECTICUT

The ARRL Board of Directors holds their second meeting of 2008 July
18-19 in Windsor, Connecticut. All Directors, Vice Directors and ARRL
Board officers are in attendance, with the exception of Southeastern
Vice Director Sandy Donahue, W4RU. The meeting, which begins Friday and
continues through Saturday, was preceded on Thursday with meetings of
the Administration and Finance Committee and the Programs and Services
Committee.
```

The Administration and Finance Committee (A&F), chaired by Northwestern Division Director Jim Fenstermaker, K9JF, study, advise and make recommendations for all administration and financial matters of the League, including recommending the annual budget to the Board, making recommendations in regard to staff management and interfacing with the ARRL Foundation on fundraising issues. Fenstermaker said he can report "a successful first half of 2008 with increased workload from membership increased and requests for services remaining high. Staff has done a good job, satisfying the needs of members. The committee continues to review new programs and opportunities to serve the members and grow Amateur Radio. We will continue to leverage our opportunities and foster a positive perception of Amateur Radio as a viable and fun avocation. "

The Programs and Services Committee (PSC), headed by Midwest Division Director Bruce Frahm, K0BJ, study, advise and make recommendations for all programs and services provided by the League, including Logbook of The World, W1AW and the incoming and outgoing QSL services. "PSC has oversight of our Field Organization and its volunteers, membership programs such as operating awards and contesting, the Education and VEC departments and W1AW. In spite of the slow return of sunspots, interest in on-air events and LoTW is trending up, which is great. Our biggest task has been a yearlong study of Section governance. We will report our findings and recommendations to this board meeting," Frahm said.

More information on the July meeting of the ARRL Board of Directors will soon be available on the ARRL Web site and in The ARRL Letter.

==> NEW 70 CM COORDINATION AGREEMENT REACHED FOR NEW ENGLAND

In the next step of developing a long-term procedure to mitigate interference to the Air Force PAVE PAWS radar site at Cape Cod Air Force Station in Massachusetts, the ARRL has brokered a deal that will allow new coordinations to be considered by the New England Spectrum Management Council (NESMC) on the 70 cm band.

ARRL Regulatory Information Manager Dan Henderson, N1ND, has been engaged in discussions with Lou Harris, N1UEC, of NESMC; USAF Colonel Chris Gentry, commander of the Cape Cod PAVE PAWS Radar installation, and Dave Pooley of Air Force Space Command Headquarters, to craft additional procedures that would allow NESMC to consider new or modified 70 cm repeater applications.

"The plan being put into place will allow NESMC to resume 70 cm coordination while putting into place some checks and procedures which will allow the Air Force to be notified when a new repeater is going on the air within the area around the radar sites," Henderson said. "NESMC continues as the frequency coordinator for amateur repeaters, which is their role."

The ARRL will work with NESMC on Longley-Rice modeling to obtain an estimated signal strength at the radar of the new repeater. Once this occurs, Henderson said the ARRL will "then make a recommendation -- based on our knowledge of current repeater signals -- if the proposed

repeater should be at or near limits that that should allow it to operate without interference to the radar."

Henderson added that this is not an exact science: "Some levels of degradation of the radar receiver levels are only detectable by precise testing. The unit of the Air Force that provides that testing only visits the Cape Cod site about once a year. It is possible that a repeater that had been in operation for a while under the new procedures would have to address an interference issue when that future testing is performed."

Calling it "fortunate" to have Harris, Pooley and Skinner involved in the process, Henderson said, that if successful, "The procedures being put into place can serve as a model for addressing the same issues in other situations which might arise, such as the mitigation project around the PAVE PAWS site at Beale Air Force Base in California."

Part of the new agreement includes the ARRL serving as the point of contact for the Air Force if new interference is detected. "The ARRL is providing a mechanism whereby and future interference issues can be immediately addressed and hopefully resolved," said Henderson. "It makes sense to have a 'first step' whereby an amateur is given the opportunity to address concerns before a more formal FCC interaction would have to be considered by the Air Force. This plan hopefully provides that step."

The agreement does not inject the ARRL into a formal role in repeater coordinations; the role of the League in the coordination process will be simply to provide the NESMC coordinator with an assessment of the proposed repeater's signal strength, as well as potential for interference at the radar site. "While we do not have the specific receiver sensitivity requirements, Air Force officials have indicated our previous calculations for repeaters already involved are 'in the ball park,'" Henderson stated. "We should be able to provide NESMC with a relatively informed assessment for any new repeater, but the final decision on whether to coordinate a repeater remains in the hands of NESMC."

==> KANSAS HAM, SON, ELECTROCUTED WHILE ERECTING ANTENNAS

While putting up backyard antennas on the afternoon of Sunday, July 13, Edward Thomas, KC0TIG, of Kansas City, Kansas, and his son Jacob were electrocuted. Edward, 65, was pronounced dead at the scene. Jacob, 27, was rushed to the hospital but died later that day. Initial reports suggest that the antenna they were installing came in contact with 7620 V power lines. Neighbors reported a "loud popping sound" and the electricity went out on the block.

Jacob's 7 year old daughter witnessed the tragedy and ran to the neighbor's yard, calling for help. Byron Kirkwood and another neighbor attempted to perform CPR on the men; the neighbor also called 911. Robert Mullendore, a spokesman for the Kansas City Board of Public Utilities (KCBPU), was quoted by Kansas City television station KSBH as

saying it is rare to survive a shock as strong as the two men received: "There are people who will survive -- they're lucky by the grace of God, it's high energy, it's dangerous, that's why it's up in the air -- you just have to be careful. Even those who survive have pretty wicked wounds and they are lifelong wounds." In the power business for more than 30 years, the spokesman said these accidents are "really rare," saying that he only sees something like this "every two or three years. If you're doing any kind of work like this, you just really, really need to be aware of your surroundings."

Chuck Kraly, K0XM, used to work for KCBPU; he built and maintained the substation that fed the circuit going to the Thomas home: "This is nothing to take chances with. In my almost 30 years as a ham -- and 27 years in the power utility field -- I have seen way too many 'accidents.' Stop and look. If it is close or seems that way -- don't. Find another place. High voltage lines are not forgiving. Your life depends on it. Please follow the warnings. Anywhere close is too close." -- Thanks to Larry Staples, W0AIB, and others who contributed to this story

==> COURT OF APPEALS: FCC MUST REIMBURSE FEES STEMMING FROM BPL CHALLENGE

The United States Court of Appeals for the District of Columbia Circuit has ordered that the Federal Communications Commission (FCC) reimburse ARRL for the docketing fee and the cost of reproducing copies of briefs and appendices in the ARRL's successful challenge of the FCC's broadband over power line (BPL) rules <http://www.arrl.org/news/stories/2008/04/25/10064/>.

The Order, issued on July 9 following review of an opposition from the FCC and a reply from the ARRL, awarded the ARRL's full claim of $6,096.18 <http://www.arrl.org/tis/info/HTML/plc/appealCostAwardOrder2008jul09.pdf>. Commenting on the Order, ARRL Chief Executive Officer David Sumner, K1ZZ, observed: "While this is just a small fraction of the cost of our judicial appeal, the Order is significant because the Court did not buy the FCC's arguments that the ARRL had only achieved 'partial success' in its appeal and that our claim of costs was excessive."

Sumner continued: "In addition, the FCC falsely claimed that the ARRL 'was unsuccessful in persuading the Court to vacate the rules it challenged.' In fact, the ARRL never sought to do so since the BPL rules adopted by the FCC, inadequate as they are, were still better than nothing. The award of these fees affirms that, contrary to the 'spin' the FCC has tried to put on the Court's remand, the ARRL substantially prevailed in its appeal."

==========

One of the most important activities that ARRL engages on behalf of its members is representation in Washington. Generous member contributions to The ARRL Spectrum Defense Fund support a full menu of activities that

help protect our Amateur Radio spectrum, including important meetings in Washington. Your contribution by mail, phone or on the Web is vital <http://www.arrl.org/defense>.

==> ARRL, FCC MEET IN WASHINGTON TO DISCUSS BPL REMAND

On July 9, ARRL officials -- President Joel Harrison, W5ZN; Chief Executive Officer David Sumner, K1ZZ, and General Counsel Chris Imlay, W3KD -- met with members of the FCC's Office of Engineering and Technology to discuss the recent US Court of Appeals decision regarding broadband over power lines (BPL) <http://fjallfoss.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6520033586>. In that case, the Court agreed with the ARRL on two major points and remanded the rules to the Commission.

According to Imlay, the meeting was convened to discuss "a possible regulatory approach" to BPL with the FCC. Suggestions put forth by ARRL "would address the needs and concerns of Amateur Radio operators in avoiding harmful interference from [BPL systems] while imposing the minimum necessary regulatory obligations on BPL deployments."

The ARRL understands, Imlay said, that "there are at this point rules that could be adopted which would, at once, (1) protect Amateur Radio communications from predictable harmful interference from BPL; and (2) permit broadband over power line systems to operate in the 3 to 80 MHz range without significant constraint and without substantial redesign or retroactive build outs."

==> W1HQ NOTES ICOM DONATIONS

Earlier this month, ARRL Contest Branch Manager Sean Kutzko, KX9X, presented ICOM Division Manager Ray Novak, N9JA, and ICOM Sales Representative Pat Marcy, W7PZ, with a plaque, thanking ICOM for its support of ARRL stations W1AW and W1HQ throughout the years. ICOM recently donated an IC-756PROIII and an IC-746PRO to W1HQ, the ARRL's Laird Campbell Memorial HQ Operators Club station <http://www.arrl.org/news/stories/2008/02/13/101/?nc=1>.

Kutzko, who serves as President of W1HQ, said it was "a real treat to get W1HQ operational again as a thriving club station. ICOM has been an enormous help in getting the W1HQ back on the air. With the addition of the 756ProIII, we are able to take our DXing and contesting pursuits to the next level at the club. The 746Pro has also been a valuable addition; we are now on-the-air on 6 and 2 meter SSB and CW."

Kutzko said he is proud that several newly licensed employees at ARRL HQ have also had the opportunity to operate VHF+: "This has allowed some of our Technician licensees to go from working amateurs on the local repeater system to working stations in Spain, Portugal and the Canary Islands on 6 meters. I am grateful to ICOM for opening those doors for us and continuing the education -- and recreation -- of our employee amateurs."

==>SOLAR UPDATE

Tad "...the setting Sun dropped from the zenith like a falling star" Cook, K7RA, this week reports: If today is like yesterday and the day before that, it will be the 26th consecutive day with no sunspots. Think this is bad? At the last solar minimum, there were only four days showing any sunspots between September 5 and October 24, 2006. For this week, geomagnetic conditions should mild in the beginning and increasing later. Predicted planetary A index for July 18-24 is 8, 5, 5, 5, 10, 15 and 12. Geophysical Institute Prague predicts quiet conditions for July 18, quiet to unsettled July 19-20, quiet again on July 21 and unsettled July 22-24. Sunspot numbers for July 10-16 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.4, 65.7, 64.9, 65.2, 65.6, 65.7 and 64.6 with a mean of 65.3. Estimated planetary A indices were 4, 7, 21, 14, 10, 7 and 7 with a mean of 10. Estimated mid-latitude A indices were 2, 6, 16, 10, 9, 7 and 4 with a mean of 7.7. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>.

==>IN BRIEF:

* This Weekend on the Radio: This weekend is the NCCC Sprint Ladder on July 18. The Feld Hell Sprint and the VK/Trans-Tasman 160 Meter Contest (CW) are July 19. Look for the DMC RTTY Contest, the North American QSO Party (RTTY) and the CQ Worldwide VHF Contest on July 19-20. On July 20, check out the RSGB Low Power Field Day and the CQC Great Colorado Gold Rush. The Run for the Bacon QRP Contest is July 21, the SKCC Sprint is July 23 and the RSGB 80 Meter Club Championship (Data) is July 24. Next weekend is the NCCC Sprint Ladder on July 25 and the RSGB IOTA Contest on July 26-27. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, July 20, 2008 for these online course sessions beginning on Friday, August 1, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors

assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News July 25: There will be no ARRL Audio News on Friday, July 25. The ARRL Letter will be available that day. ARRL Audio News will return on Friday, August 1.

* E-mails Asking for Personal Information Not from ARRL: We have received several reports from ARRL members with arrl.net e-mail accounts who have recently been contacted via e-mail asking for personal information, such as user names and passwords. Please be assured that these e-mails are fraudulent attempts at "phishing" and did not originate from ARRL. According to ARRL Information Technology Manager Don Durand, "This is a very crude attempt at phishing, using an easily determined spoof of the originating/return address. There is never a time when we would ask via mass e-mail for user names and passwords of arrl.net users. There is simply no need to ever do so." If you receive an e-mail asking for personal information and it looks like it originated from ARRL, please do not respond, just delete it.

* Robert Dickinson, W3HJ (SK): Robert Van Cleft Dickinson, W3HJ (ex-W2CCE), of Zionsville, Pennsylvania, passed away May 28. He was 79. A Fellow of the Society of Cable Telecommunications Engineers and a member of the IEEE, Dickinson, a long-time ARRL Technical Advisor, wrote the chapter on cable television interference in the second edition of "The ARRL RFI Book." ARRL Lab Manager Ed Hare, W1RFI, remembered Dickinson, saying, "In the early 1980s, as the cable industry was developing, the relationship between the cable industry and Amateur Radio was not good. Early systems were leaky and interference problems -- especially on 2 meters -- were common. Dickinson helped change that; he agreed to serve as a liaison between the ARRL and the National Cable & Telecommunications Association (NCTA). It took years, but over time -- as improvements in the construction of cable plants and firm guidance from NCTA to cable operators who did not promptly correct interference problems -- his work helped the cable industry flourish with good coexistence with licensed radio services. This has served as a model for ARRL's relationship with other industries." ARRL Chief Development Officer Mary Hobart, K1MMH, echoed Hare's thoughts: "We are saddened by the loss of Bob Dickinson, W3HJ, a good friend of ARRL and Amateur Radio. Bob's keen interest in League activities on behalf of our Service was evidenced by his generosity as part of the ARRL Diamond Club for five years, as well as his financial support of the Spectrum Defense Fund and the Education & Technology Fund." Dickinson is survived by his wife Jessie, four children, five grandchildren and three great-grandchildren.

* W1AW/KL7 to Operate from Arctic Circle: Just 300 miles south of the Alaskan Arctic Ocean -- where the Arctic Circle crosses the Dalton Highway (66 degrees, 33 minutes north) -- W1AW/KL7 will be on the air (grid square BP56) July 26-August 10 on all bands from 160-6 meters. This ARRL 2008 Alaska State Convention Special Event Station plans to run two HF stations operating CW, SSB and digital, one satellite station and one station devoted to 146.52 MHz. The Alaskan summer skies are ablaze with gray line-enhanced propagation effects, providing six to eight hour spurts of activity to most of the ham radio world. W1AW/KL7 plans to be active from 0600 UTC-1400 UTC to maximize gray line propagation. From Alaska, signals will take off in both directions at the same time: Europe to the East on one side, with Asia to the West on the other side. For an illustration of how Arctic gray line propagation works, see page 21 in the August 2008 issue of QST. The 2008 Alaska ARRL Convention will run from August 1-4, 2008 in Anchorage. For more information, please see the W1AW/KL7 Web site <http://www.akhamfest.com/arcticcirclespecial.php>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

757. Interesting Amateur Radio Statistics

Newsgroup: rec.radio.amateur.moderated
Date: 2008-07-20 15:45:20 UTC
From: N2EY@aol.com
Message-ID: <64baff32-579f-492c-9f38-a7adf13d07d3@d45g2000hsc.googlegroups.com>
Source record: 2628

W3HF has posted some interesting license-number statistics at:

http://www.geocities.com/w3hf/LicenseStats.htm

These numbers are derived from his Callbook collection.

Some points of note:

- There were years in the 1960s-70s when the number of US hams
declined or grew very slowly.

- The Technician class appeared to grow very rapidly for a few years
after 1991. But the Tech Plus was not listed separately from Tech
until 1995. Once that change was made, the Tech Plus class grew very
quickly and the Tech actually declined for a while as licenses were
reclassified.

- At one point, just 14 years ago, there were over 101,000 Novices.

- There were only about 5,000 Extras in 1967, less than 2% of the
total. Conditionals, OTOH, made up about 15% of the total.

It's not clear if the totals include grace-period licenses or not.
>From comparisons to other sources it appears that the Callbook numbers
do include grace-period licenses. The grace period was one year when
the license term was 5 years and is now 2 years.

Thanks to W3HF for posting the info.

We did that when we went looking for this house 9 years ago. Our
Realtor was firmly in our camp, but the houses just weren't there. We
turned down three houses that were nicer than the one we're in just
because of that. Our other "must have" was that it had to be within
one block of a bus stop. That we are.

I pursue my happiness with a K2 and an all-band antenna....

What the _Howard_ case said is that an amateur license doesn't grant a
right to erect any antenna of the licensee's choosing (as against the
regulatory authority of the jurisdiction filtered through PRB-1).

It's still basic, though, that a HOA Rule or CC&R cannot prohibit
amateur radio operation per se.

Yet the broadcast industry is going to SS as fast as they can.
Modular in design, if one "final" module fails, the power gets reduced
but they stay on the air. If a "final" tube fails, it's February
2009 much sooner. Reduction in maintenance costs outweigh capital
investment. I don't think that you can buy a new AM broadcast
transmitter below 50 KW that isn't SS all the way, and there are
plenty of SS 50 rigs in service.

The SS transmitters don't sound as good as their tube counterparts: I
worked at a station that had a SS transmitter in the 5K class, and
whenever we switched the "old" unit on so we could maintain the new one,
I heard a noticeable improvement in sound quality. It was subtle, and I
was in the business, but it was definitely there.

The management loved the SS unit because it took less power, but I was
disappointed with the sound.

Are there statistics about tests taken anywhere?

We're never going to know what proportion of license holders are
active (whatever that may mean). Test numbers are a much more
sensitive (and possibly misleading) indicator.

Of course! But that shows the difference between Amateur Radio and
other services.

Perhaps I should have specified that the comparisons I was making were
between SS and tube amps meant for Amateur Radio service, particularly
HF and VHF service.

A broadcast transmitter has to be ultra-reliable and built for
continuous service. At 8760 hours in a standard year, it doesn't take
long for a component with an expected life of 10,000 or 20,000 hours
life to require replacement. Which BC folks tend to do on a schedule,
rather than waiting for failure to force the issue.

But with a very few exceptions, an amateur transmitter spends very
little time actually transmitting. I'd guess that most active amateurs
are on the air less than 1000 hours per year (that's about 2-3/4 hours
per day, every single day), and when they are on the air, most spend
at least half their time listening. OTOH, most amateurs will change
frequency at least once in a while...

So while the BC station owner can justify the purchase of an SS
transmitter based on lower maintenance costs, the amateur is usually
more limited by first-cost.

r.

As previously observed, one can only buy what is for sale when one is looking to buy. There are several houses near me that I would gladly move to - but they're not for sale, and haven't been for at least a decade.

And unlike many other purchases, moving has a lot of upfront costs in the form of fees, taxes, and expenses connected with the sale of one place and the purchase of another. Many of them are priced as a percentage of the house price, too. While it is possible to get around a lot of them if you know what you're doing, most of us don't buy and sell real estate often enough to be any good at doing that, and are well-advised to hire pros for the job.

I am curious, though, about some things that seem pretty common in amateur discussions about HOAs and CC&Rs.

It seems to me that a lot of amateurs insist on a new house, or at least a newer house, meaning something no older than 10-20 years. Older homes are simply off the radar, for some reason. Is it just me, or is this a real trend? What's behind it?

Respectfully Jim, I think that is just simplified too much.

While it is true within itself, It is possible to get the house that you want, and with the features you want.

You just might have to wait a while. We looked several times before we bought the place we are in now. Some times we just didn't buy.

This is the part that I do that is apparently foreign to many. The is no law that says that we have to buy a house, some house, any house. One can live in an apartment for a while, or as we did, a mobile home. It took about 2 years, but we got a real bargain at the price we wanted, in the neighborhood we wanted. Sold the mobile home for nearly what we paid for it, and were out only the lot rent. House rent would have been a bit more outlay, but it's still worth it to get the house you want.

I did the same thing with a motorcycle I bought recently. I could have bought new or what the dealers wanted and had the bike I wanted in around 15 minutes. I looked and waited for a month to find a motivated seller, and got a good bike for thousands less.

And back to Ham radio, I have bought all my used radios that way. Got an IC-745 for $250, and my latest, an IC-761 for 300 dollars. I just had to wait and pounce at the right time.

Patience will reward you. Buy exactly what you want, not the one that you think is best when you first start looking

Jim, what I think it is is that we are hearing mostly from those who are having trouble putting up an antenna, and since they are mostly from the newr home group, they are more likely to be people who insist on a newer home. Just a guess.

That's pretty much the pattern for developments everywhere. And not
just large developments either.

There is an way, however. Doesn't work all the time but it has worked
in some, and may be worth a try in this RE market.

(insert standard "not a lawyer" disclaimer HERE)

The way deed restrictions & covenants work in the areas I know of is
that they are recorded when the property is first sold. And of course
one of the restrictions is that each owner has to pass the
restrictions on to the next owner.

But in some cases, the first buyer can say "NO!" to the developer, and
get restrictions removed *before* the sale. So while the rest of the
properties may be restricted, that one isn't.

HOA rules are another issue completely, but the same approach may
work.

In a market where the developer is desperate to sell, a buyer who is ready to sign on the dotted line if certain conditions are met may be a big incentive to remove some boilerplate.

However, this is not something to try without expert RE legal counsel to make absolutely sure you have airtight exemption *before* you sign anything. Verbal assurances mean nothing; it's gotta be in clear writing and properly recorded.

Of course you've got to be ready to simply walk away if they say no or even if they hem and haw.

> I've seen only ONE subdivision in my area that would have allowed

> no junk cars, lawns mowed, fences in good repair etc.)

That brings up another point: Local governments pawning off responsibility.

In every house I've lived in, things like no junk cars, lawn mowing, barking dogs, trash, general repair and such were handled by various government ordinances about nuisances. Be a bad neighbor and the local gendarmes will show up with a notice of violating some ordinance or other.

IMHO some local governments, rather than pass and enforce such ordinances, depend on the HOAs and CC&Rs to do it for them. "Keeps the taxes down" is their excuse, but of course the enforcement comes out of HOA fees.

> The problem is that the big builders have boiler plate CC&R's that

Not just big developers either.

> More and more land is becoming off limits to ham radio
> antennas and
> this is a bigger problem in areas that have been under active
> development for the last 20-30 years such as Dallas.

The cure is for lots of people to write Congress and get them to order FCC to expand the OTARD preemption. FCC has clearly said they will do it when Congress tells them to.

> Therefore I have to object to the "just move" response to the plight

> areas that allow them, but they do not compare with where I live in
> price or age.

IMHO, one of the things that keeps the price of restricted houses down is the restrictions! Another is the HOA fees and added cost of keeping the place up to HOA standards. I've seen it in action.

> Yes, I could drive 40 more miles a day and perhaps find
> something that would work, but with the cost of driving these
> days Iï¿½d
> be moving into less of a house for sure to make ends meet.

40 miles a day in a small car is maybe $6 in gas....

IMHO, a house where you can't have antennas is less of a house than one where you can.

> There are fundamental
> problems with CC&R's and pesky HOA's under the current
> law. Depending
> on how they are drafted, they can end up causing some
> seemingly very
> unreasonable consequences for homeowners that may not be
> obvious by reading them.

Such as?

The one I can think of off-hand has to do with energy. As far as I can tell, the days of cheap plentiful energy are ending, and we're going to see higher prices not just for gasoline but for electricity and natural gas.

One way to cope will be to use less energy and to use alternate technologies. For example, whenever the weather is nice I hang clothes on the line rather than use the dryer. Saves a couple of kWh per load. At 15 cents per kWh it adds up, plus in the summertime it reduces the load on the air conditioner.

Some folks around here have solar hot water heaters that reduce the need for the regular hot water heater to turn on. The panels are on the roof, facing south.

We may someday see low-cost wind and solar electric power systems for homes. Depending on the wind and sun conditions where you live, and how much electricity costs, they may someday be a reasonable

alternative for part of the electrical load.

But if CC&Rs ban such things, some folks will be very unhappy.

> Personally, I think they should be put under some
> really strict legal limits and the powers of HOA's strictly limited.
> But all that is another issue...

Not really. Part of the problem is that a lot of folks don't really know what they're getting into when they buy.

Friend of mine bought into such a place, and after some time discovered that the upstairs windows leaked. The construction was rather slipshod IMHO but caulk had worked for a couple of years. But now he had a major job to fix the problem.

But he couldn't just fix it - he had to get HOA approval every step of the way. He had to buy exact replacement windows, even though better ones were available for the same money, because the better ones weren't HOA approved. He had to get a certain kind of trim and paint and such, at high prices, not because it was high quality, but because the stuff wasn't stock anymore.

What was a simple project that could have been a major improvement turned into a major headache that cost lots more time and money.

> All in all I can only hope that this CC&R Craze comes

> are thought to be. But until they fall out of favor to the public or
> get pre-empted by law they will only increase in coverage.
> Personally, that scares me.

Me too!

The problem is that it doesn't scare most folks.

They've been pretty standard for more than 30 years in some places. And in a lot of cases the homeowners don't really own the land!

source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

While this might give you the legal right to erect an antenna (and it might not; I'm not a lawyer either), I would look carefully at other factors before considering it. Let me illustrate what I'm trying to say by building two scenarios:

1. The development has large lots and the neighbors are pretty laid back. You buy the house and erect an unobtrusive antenna. Your neighbors don't notice, and the ones who do don't care.

2. You erect a tower on your tiny lot and hang a bunch of antennas on it, creating what looks like a masterpiece to your eyes and an eyesore to your neighbors. Since the people who bought in the development are particularly sensitive to such things, they make your life miserable even though they have no legal recourse.

The scenarios are deliberately exaggerated to make the point that the legal situation is only one aspect of living in a community. If the other members of the community have a strong mindset about what's appropriate and you're outside that mindset, there will be an issue. You have to live with these people. If they, as a group, feel strongly enough that you're acting inappropriately they'll get their way, deed restrictions or not.

when did this become a nation of Sheep?

yes can have difficulties with neighboors but without legal recourse
sooner or later the nighboor would have the recourse of criminality or
moving themselves.

of course if you are more concerned about others wishes than your own
needs ....

thank the gods I live out in the country with my 50 plus acres of

Steve, that is a good point. While I can put up anything within reason, I have went with unobtrusive antennas. Some of my neighbor know about the antennas, and some don't.

Get along with the neighbors!

> The scenarios are deliberately exaggerated to make the point that the
> legal situation is only one aspect of living in a community. If the

> restrictions or not.

This brings up another thought. I wonder how many times a person who has trouble with the neighbors might have trouble with them in other areas. Some times an antenna fight might just be a proxy for personality clashes.

Also a bit of friendly explanation can go a long way. When I put up my first dipole, the neighbors across the street came out to ask what I was doing. Natural enough when they saw the crazy guy on the roof with a slingshot and fishing line. I explained exactly what it was, and told them about it's uses, especially about emergency communications. I gave a few examples, such as the lower Ontario disaster that happened a few years before.

I even noted that in really bad disasters, I could patch them through to their relatives to let them know they were okay - if the local phones went out.

It can be a lot easier sell when they can see that it might be a benefit to them. Our locale was the site of a couple major wintertime disasters in the last 10 or so years. Big winter storms that came early and brought trees down that still had leaves on them, knocking out power and phone for several days, as long as a week in some areas. The

collective response was, "I'll be, that's pretty cool".

A tray of cookies or brownies once in a while or the occasional beer doesn't hurt either! Hard to get too mad at people you break bread with.

Contrast that to demanding your right to put up whatever you darn well please, and if the neighbors don't like it, they can can it. We all know which one works better.

Agreed in most cases. But there are probably exceptions out there. I
don't know
what it's like trying to buy real estate in Tucson or Dallas, for
example.

> This is the part that I do that is apparently foreign to many. The is no

It all depends on the situation.

For one thing, there's the money aspect, which is a big one for a lot
of us. Living in a rented space means no deductions for interest or RE
taxes, and no equity building.

When the RE market is rising, waiting too long can be a big problem.
If the house values
are rising faster than your purchasing power, you can find that this
year you can't afford a house that you could have afforded last year.
(Of course this causes people to buy *now*, which raises prices, and
the circle keeps rolling...)

It is a common story here to meet folks who could not afford the house
they live in if they had to buy it today, because the house prices

went up much faster than their income.

Besides pure $$, there are factors like the kids' education. At least in PA, the public schools your kids attend depends on where you live, and different school districts have very different levels of quality. In many areas the house prices reflect that. I've seen similar houses on opposite sides of the same street priced 20% differently, because one was in the highly-rated Podunk School District and the other in the good-but-not-as-highly-rated Squeedunk School District. On top of that, pulling the kids out of one school and dropping them in another may not be the best idea if there's any other option.

> I did the same thing with a motorcycle I bought recently. I could have
> bought new or what the dealers wanted and had the bike I wanted in

Sure. But everyone needs a place to live; not everyone needs a motorcycle. More important, real estate isn't portable.

> And back to Ham radio, I have bought all my used radios that way. Got an

(cue Jacques Coustea narration)

....ze barracuda waitz patiently for ze most taztee prey to svim by.....

> Patience will reward you. Buy exactly what you want, not the one that
> you think is best when you first start looking

Agreed, but RE is different. For one thing, it costs so much more. $300 for a rig is a different thing than $300,000 for a house. The ham who can afford a couple of $300 rigs probably can't afford a couple of $300,000 houses.

Plus if you choose right you can try a variety of used rigs for relatively little money. The main cost is shipping. Buying and selling RE you live in is a completely different game!

And in many areas $300,000 doesn't buy a lot of house.

Most of all, depending on your given set of criteria, it may be a very long time before the house you really want comes on the market.

Possibly, but the question remains: Why a new or newer house?

> properties may be restricted, that one isn't.

Well, looking at the legal process that went on before I purchased my
house, this isn't going to work. The CC&R's are actually recorded for
the whole property before it was plated and sold to the developer. At
least in my case, these restrictions where already recorded before the
developer owned the lot. There are over 300 lots in my subdivision
and for the developer to except one of the lots, he would have to own
them all, remove the restrictions on them all and reapply them to all
but one. I got a feeling that they won't go to this much trouble.
Yea, they may give you a "The HOA will allow antennas on your lot"
letter, but that would only be good for as long as the developer owned
enough lots to retain control of the HOA and actually cared to live by
the agreement. After that, it would be worthless.

> HOA rules are another issue completely, but the same approach may
> work.

In my case the HOA rules are spelled out in the CC&R's (for the most
part). They have some latitude in some areas of appearance, but not a
lot. My CC&R's actually specify the maximum heigth of the grass in
you yard.

> However, this is not something to try without expert RE legal counsel

>

Very good advice. Get a lawyer BEFORE you need one. Having all the
"I's" dotted and "T's" crossed legally is the best way to proceed. By
the time you need one, it's going to be too late.

We can also go to the City, County, and State and ask for preemptive
rules for Part 97 antennas. I get the impression that one might have
more luck in those venues than in Congress. I've seen more than one
antenna bill get introduced into congress with pretty good support
only to get buried in committee and never to be seen again. I don't
see that changing anytime soon.

Compared to my current 6 mile/day bill of $0.60 using that car is
pretty expensive. I'm also 6'7" so it's kind of hard to find a car I
can fit into and get good mileage.. But we are moving off track.

>
> Such as?

For example... Say the HOA doesn't like the current color of your
fence. You live on a fixed income and cannot paint the fence but the
ACC changed the rules and now your fence is unacceptable. HOA
eventually assess fines, charging you for each day the fence is not
painted. They file leans on your property to secure the debt and you
could loose your house, all because the "rules" changed and you didn't
agree to the change.

> > Personally, I think they should be put under some

> Not really. Part of the problem is that a lot of folks don't really
> know what they're getting into when they buy.

Some do but the fine details about what can happen would be lost on most of us. In Texas things get pretty crazy. I've read a case where a guy got a lot with deed restrictions that didn't allow "mobile homes". He started to have a pre-fab modular home built on the lot and got hauled into court by the HOA for trying to install a "mobile home". He ended up loosing the case after nearly 5 years of having a half completed house he couldn't live in. Paid substantial fines too. Crazy Texas courts where they attempt to take the most liberal interpretation in favor of the HOA they can.

> Friend of mine bought into such a place, and after some time
> discovered that the upstairs windows leaked. The construction was
> rather slipshod IMHO but caulk had worked for a couple of years. But
> now he had a major job to fix the problem.
>

Oh, I know how that goes. My dad made the mistake of getting the windows changed without consulting the HOA. Hooo Boy, what a mess that was.

I got a letter from the HOA telling me to mow my lawn... OK, but I had proof that my lawn was being mowed each week for the entire summer (can you say cancelled checks to the lawn care guys) and I'm sure the yard wasn't getting out of hand enough to warrant a nasty letter from the HOA in a week. I figure it was a mistake, but I can just see some guy hired by the HOA driving his Honda though the neighborhood looking for "violations" scratching notes in a book. (In our case it's a lady in a orange corvette that works for the management company. I know, I spotted her a few times before I saw her at the last HOA meeting.)

Also, I don't dare try and "hide" a stealth antenna in plain sight. It's like the SS is driving around looking for a justification for the high fees the management company charges. For some reason they can see 18 gauge bare copper coming off the back of my house heading for the back fence. (Oh yea, I got a letter on that one too.) I could barely see it from the street, knowing it was there.

I wonder what the smallest gauge wire I could try for a 75M dipole that would stay together for a reasonable length of time? I'm also got a bit of ladder line I'm thinking I'll use to feed a loop antenna running along the edge of the roof secured with Christmas light holders.. I wonder if they will see that too?

Flagpoles are a highly touted option (Just hide a vertical in one) but there are issues there too. In order to be safe, (and legal in some cases) I'd need to consider RF exposure limits and take steps to keep somebody from getting too close to the flagpole in the front yard. If

they allowed the flagpole to go up without comment a fence, or some kind of screening, is going to get HOA attention.

Iï¿½ve considered trying to appeal to the HOA board for some minor allowances. Like giving me the ability to put up things that are hidden behind the house with perhaps just the top 20ï¿½ of a vertical visible above my roof or allowing some antenna supports hidden behind my house with just small wire visible from the street. The problem with that is that I donï¿½t know where to start with them. Iï¿½ve considered running for the board to increase my pull, but I just donï¿½t have the time right now.

Has anybody had any success with getting an HOA to allow this kind of thing, in spite of the clear restrictions in the CC&Rï¿½s?

Well I don't know about you but my wife has a LOT more to say about my
antenna aspirations than the neighbors ever will. She's not going to
allow anything she considers an eyesore to go up. She sees me gawking
at some of the antenna farms around and makes it clear I won't have
one that looks like that!

Of course this puts me in a difficult situation. When I retire to the
country and get the 20 acres on the hill side. She's going to want
the house on the top of the hill and the antenna farm someplace else.

The problem is, how do you know the neighbors are pretty laid back
before you move in? Also, some folks consider *anything* different to
be "obtrusive".

> 2. You erect a tower on your tiny lot and hang a bunch of antennas on
> it, creating what looks like a masterpiece to your eyes and an eyesore
> to your neighbors.

This is where the question of "reasonable" comes in. A big tower on a
small treeless lot may not be "reasonable", while a simple vertical or
wire antenna would be.

A big tower on a big lot, screened by trees, is another thing
entirely.

> Since the people who bought in the development are
> particularly sensitive to such things, they make your life miserable
> even though they have no legal recourse.

The problem is that usually you don't know beforehand what sort of
neighbors you'll get.

The point I was making is that universal antenna restrictions on new
homes may not be a foregone conclusion in all cases if you know the
right approach.

Repeating an earlier warning: This is definitely a situation where
you'd want professional counsel (RE lawyer) to make sure you get what
you think you're getting.

> The scenarios are deliberately exaggerated to make the point that the
> legal situation is only one aspect of living in a community. If the

> appropriate and you're outside that mindset, there will be an issue.
> You have to live with these people. If they, as a group, feel strongly
> enough that you're acting inappropriately they'll get their way, deed
> restrictions or not.

Maybe; it all depends on the situation. For example, not everyone who
buys into a restricted community cares or really knows about all the
restrictions; they may be buying on price alone, low maintenance, etc.
I've talked to a lot of folks who have no idea of the restrictions
they live under until they cross one.

Couple of problems I see all the time:

1) In many new developments, there are no trees of any size, no
fences, and all the utilities are buried. The few inconspicuous places
are used for the A/C condensers and the utility meters. The result is
that *anything* you put up is extremely visible to many neighbors.

2) In many new developments the houses are close together and the
ratio of building to ground is very high, and the roof is useless for
antennas for a number of reasons. Again, this makes anything different
stick out.

Both 1) and 2) are examples of how a lot of modern housing, even if
unrestricted, is not ham-radio-friendly.

3) In many cases all it takes to cause a problem is one or two
neighbors who don't like something. IOW "the Gladys Kravitz effect".
IOW there are people you cannot ever please.

There's a balance between doing whatever the neighbors might want, and
saying the heck with them, you'll do whatever *you* want. That balance
is the concept of "reasonable". And like Quality in "Zen And The Art
of Motorcycle Maintenance", almost everybody knows what "reasonable"
is (to them, anyway)
but almost nobody can exactly define it.

One more point:

A question I see all the time from some hams is "why would anyone buy
into/want to live under such restrictions?" or variations thereof.
Often there are declarations of how these things are evil,
unconstitutional, whatever, be they zoning ordinances, HOA rules, etc.

The answer I give is that it's often due to bitter experience, either
one's own or another's. All it takes is one or two really bad
neighbors ruin a neighborhood.

IOW, a lot of what drives this is fear that neighbors won't behave responsibly, or reasonably. Like the person who puts his trash on the curb on Thursday, for a pickup on Tuesday of the next week. Or the person who can't seem to find a paintbrush or a lawn mower.

Well, there goes that idea in your case. But in others it may work.

> There are over 300 lots in my subdivision

Maybe. Even if he bought them all, he may not have the right to repeal
the restrictions. It depends on the exact wording.

I look at it differently. Unless you are an RE lawyer yourself, assume
you need one.

> > The cure is for lots of people to write Congress and get them to order

> more luck in those venues than in Congress.

Probably not. Here's why:

The thing about deed restrictions and covenants is that they are considered private contracts. Most governments don't want to bust in on private contracts - or at least that's the excuse they give.

The one exception is that you cannot make a valid, legal contract to do something that is clearly illegal. Suppose A hires B to murder C, writes up a contract that they both sign, and A pays B in advance. But then B decides not to do the job. A cannot use the courts to get his money back from C for non-comission of a crime.

The OTARD ruling stemmed from the idea that the anti-TV-antenna rules effectively created an illegal cable-TV-provider monopoly, and restricted interstate commerce in doing so. The satellite TV folks had to go all the way to the Supremes to get that ruling, too.

As another example, it used to be legal to put all sorts of discriminatory restrictions in CC&Rs as to who you could sell the property to - race, ethnicity, religion, etc. Civil rights and equal housing laws made these illegal.

On top of that, the local governments, if they have any sense, will say it's the FCC's area, not theirs, and to go talk to them.

> I've seen more than one
> antenna bill get introduced into congress with pretty good support

What is "pretty good support"? How many hundred thousand letters to Congress supporting it?

Maybe not.

One of the big problems we have in the USA is that we're overdependent on rubber-tire, fossil-fuel-powered transportation. Consider your 300-unit development - does it include a shopping center you can walk or bike to? Or does almost anything require a car or truck ride?

Too much of our country is designed around the automobile, which leads to all sorts of problems. But it doesn't have to be that way - look at Portland Oregon for how things could be. (And it didn't used to be that way - towns and suburbs used to be built so that a car wasn't an absolute necessity).

Good point. I wonder if it could be argued that such rules effectively
create a monopoly for the paint company that makes the approved kind
of paint?

The fundamental problem was that he was doing something they didn't
like. That's the key issue and the key question: why didn't they like
the prefab modular home?

> > Friend of mine bought into such a place, and after some time

My friend dotted all the Is and crossed all the Ts. Point is, it cost
him a lot more because he had to get the exact approved windows and
such; he couldn't get the windows he wanted.

Could that be a monopoly, again?

I'm afraid the problem there would be that the HOA would hide behind
the CC&Rs, saying their hands are tied. And they'd be telling the
truth.

I can think of one thing hams could do - a sort of "guerilla theatre",
as it were. (Perhaps I listened to Arlo Guthrie's "Alice's Restaurant"
a few times too many when I was younger....)

Suppose that a developer is having an open house or similar promotion
(expect a lot of them with the RE market the way it is).

And suppose a lot of nicely-dressed radio amateurs and their spouse
show up to look. They act eager and interested, comment on how nice
everything is, and how the place is just what they are looking for and
well within their price range. They start talking about preapproved
mortgages, where the furniture will go and what kind of drapes they'll
install, plus how much cash is in the checking account to make the
deposit.

Then they pull out a big measuring tape and start measuring the yard.
The agent will ask what they are doing, and they say they're figuring
out where the amateur radio antennas will go. "There's no rule against
them, right?" they ask. Of course the agent will have to tell them the
truth, because of disclosure laws.

As soon as the agent says "no antennas", they put all the literature
down, roll up the tape, say "Thanks but no thanks, we wouldn't live
here if you gave us the house", get in their car and drive away.

If one person does it, they'll think it's an oddity.

If a few people do it, they'll look into it.

If a lot of people do it, they may think it's a movement, and get the
message.

Waddya think?

least a newer house, meaning something no older than 10-20 years.
Older homes are simply off the radar, for some reason. Is it just me,
or is this a real trend? What's behind it?

==========

In my case, I like nice and new because it's nice and new and clean, everything's under warranty, uses the "latest technology," it was built with my choice of its internals, including having coax run through the walls from the roof to my "shack" area.... and I could live with relatively stealth antennas. Why? Because the house itself is for me more a priority than is ham radio.

As for CC&R's, I knew it all going in, and I knew that I would be working with an HOA that is not run by a bunch of... I won't use the term.... I would *never* live under a regime like that. While it's a 200 home development, they are fairly flexible in what you can and cannot do. As I said earlier, I have had an MFJ Hi-Q Loop mounted in my backyard for 10 years, and no one has ever said a word. It works very well, as evidenced by all the DX I've worked with it. I had a Diamond 2m/440 antenna (40") mounted on the roof, also as visible as possible.

An HOA can be fired. If the majority of homeowners want to throw them all out and change the CC&R's they can. (I know, not likely, but the point is that it can be done.)

So while there are choices, there are choices. Choose wisely.

>can live in an apartment for a while, or as we did, a mobile home.

We moved from a 2-bedroom condo apartment when we ran out of room for what we wanted our living arrangements to be. We had no guest room for our kids (big issue while my divorce from their mother was being negotiated), no separate office and studio for each of us, a kitchen that was the size of a telephone booth for my wife the catering chef, and all the office furniture and my professional library was in a 10X10 storage cubicle after I closed my law office. We bunked in our kids' guest room for a month while our goods were piling up storage fees because we had to wait for our condo apartment to sell and clear escrow before we could put our equity into another home. There was no way we were going into an apartment and then having to pay for another move to a place that we would find "later on". We spent a week with the Realtor checking out deed restrictions and looking at places that might meet our needs - space, number of rooms, proximity to public transit, specialized medical services (I was legally blind at the time), easy travel to our congregation (the only one of our denomination in the entire state), freedom for onerous anti-ham ordinances and deed restrictions, a decent and safe neighborhood, and so on. After turning down three nicer homes (including one brand-new townhouse that the Realtor's researcher said "no CC&Rs" although the development literally screamed "restrictive CC&Rs" in my experience, we settled for this one. We still ran out of storage room and had to do a fair amount of rebuilding but I could put up my 12 antennas and my wife could resume her contract catering business - "but it's only one-half block from the bus stop", as my wife reminds me when we discover another problem with the 30+ year old house.

Priorities....

According to California law - the one that I work with - the CC&Rs
are recorded before the first unit is built, and both state law and
common law holds that the restrictions run with the land. The "first
owner" legally is the developer.

I was lucky with the condo because the restriction was no antennas
without permission of the board, and I got that permission while the
developer was the "board" and the permission ran with my ownership and
occupancy of the unit.

California has a process of getting out from under, but it's a long haul. The owner has to prove that the restriction is unreasonable. We couldn't do that for Jimmy Rich's 75 foot tower (See _Hotz v Rich_ in the ARRL Antenna and Zoning Handbook).

We have a neighbor across the street who had a real bad case for us
about the condition of our lawn (neither of us has the strength or
stamina to really care for it) and the leaves that fall on our lawn
and get blown onto her pristine and well-cared-for lawn (that's all
she has to do all day....).

When I put up my antennas, including the R-8 vertical that sticks up
50 feet above the ground - not a peep. When we finally had the
offending trees removed and contracted with a lawn maintenance
company to take care of the property, she stood there and watched them
work all day. Not a word of "thank you".

At least she doesn't pound on our door and make threats like she used
to.

At least one state (Florida ?. New Hampshire ?) incorporated that
preemption of private contracts into their state "PRB-1" statute. The
US Constitution inhibits Congressional interference with the right of
contract (subject to the usual time, place, manner and least
restrictive means exemptions) but civil contracts such as CC&Rs are
creatures of state law and can be regulated by the state.

This is why I include that "I am not a lawyer" disclaimer so often.

Thanks for the correction, Phil.

I guess the reason for the equal housing and other laws was to outlaw other forms of discrimination, such as the realtor who wouldn't show a house to the "wrong" people, lenders who had different lending rules depending on ethnicity/race/gender/religion, etc.

Gotta find out which states - and add to the list!

Pennsylvania isn't one of them yet, I know that much.

> The

Now I'm a little confused.

I recall reading that FCC has been repeatedly asked to extend the TV-antenna-preemption thing to amateur radio antennas, but has responded that they will only do so when Congress tells them to (in the form of legislation).

But now it looks like the state (not local) governments can, if they want, incorporate PRB-1 into their civil contract statues. I think this means they could declare too-strict no-antenna CC&Rs as "unreasonable" and therefore illegal.

If I understand this correctly, we hams have two avenues to pursue; state and federal.

So you did a version of the second idea. That's great!

CC&Rs, HOAs and such are of interest to me because although I've
managed to avoid them in the homes I've owned so far, the trends are
not promising for the future.

I see a lot of (to me) strange development going on.

The first is the McMansion, a huge frame house on a relatively small
lot, with all sorts of restrictions. Incredibly priced, too, and you
don't even get sidewalks. How people are supposed to heat, cool and
maintain them as prices rise is beyond me.

The second is the condo development, aka "above-ground-rabbit-warren",
where a lot of units are piled onto the absolute minimum of land, sort
of like city rowhouses. The problem is that the development is nothing
but homes and is sited on a busy road, so you have to get in your car
and drive a couple miles or more just to get groceries or go to the
post office. IOW, many of the disadvantages of the city and few of the
advantages.

Admittedly, we have been blessed neighbor-wise. DId you tell here that
your radials help you grass grow, and you'd be happy to extend them onto
her lawn? <evil grin>

Thus has long been recognized, but the states are too close to the
developers to want to take them on, and it would take 50 campaigns to
do what a single Federal campaign would do.

We've seen what happens when such a bill is introduced into The
Congress, even when it is cloaked in "equality" and "public service"
terms.

Maybe we need to get some pictures of someone or other.... :-)

We had a builder put up a MaxiMansion near here for his own residence.
They had to put in a new gas line up the street to provide enough gas
to heat the place. He has his own pole-pig too. The price was
several mills three years ago. The house across the road from that is
35 rooms occupied by a couple in their 90s - the largest car dealer in
the Portland area. I would suspect that both of those places have
live-in help.

Isn't it nice to have money?

One of the, few, "Nice Things" about living out in the "Middle of
No where", is that if your nearest neighbor is 5 miles away,
and there are 200 ft trees between them and you, it really doesn't
matter just how BIG, and Tall, the Antenna Farm gets.

The magic phrase is "For the children" or, now, "To fight terrorism."

Properly done, it could lead to anyone WITHOUT a tower will be viewed
with suspicion by the rest of the neighbors.

See! I could live in one of those places--as live-in help.

> Isn't it nice to have money?

I'd love to have the opportunity to find out if wealth could mess up my
life. Though indoor plumbing came to this area long ago, there's still
a WPA-built privy on our property. When I can afford to do it up in
gold leaf, I will know that I've arrived.

There's an article in today's Washington Post

http://preview.tinyurl.com/6ego68

that describes a technology that's under development to provide Internet access using spectrum in the TV channel range. Apparently this scheme checks for a signal before it uses a specific frequency and switches to a different one if it detects that the frequency is in use.

I wonder how this will work and play with amateur radio. I remember when TV channel 2 was established in my home town, effectively shutting down six meter ham operation because the TV signal was so weak that even a correctly-operating six-meter rig would create serious TVI for the fringe reception of channel 2. Decades have passed and this new technology surely is much less sensitive to adjacent signals than the TVs of my childhood, but the analogy persists.

Some (and only some) West Virginia communities require permits for
erecting a radio tower. the CC&R situation is as ugly as it gets
anywhere else. Out in the counties, the situation is quite different.
Here in Marshall County, *no permit of any kind* is required to put up a
tower. Count elevation, cheap dirt and no antenna restrictions among
the reasons we chose to live here.

We hams are starting to see some higher power amplifiers available but at rather breathtaking prices. I've drooled over a couple of the Tokyo Hi-Power offerings and I have a friend running the Yaesu Quadra. I think the MFJ/Ameritron folks will need to get into the solid state amp game before we see *affordable* solid state amps with outputs of 1 to 1.5 KW. Only when that happens will I make my move to a solid state amp.

A lot of it might be in heating and cooling costs. Most newer homes are super insulated--built with 2x6 walls, wrapped with Tyvek and have joints sealed with expanding foam. Many of them offer geothermal heating/cooling systems as well. One of my pals lives in Indiana. His total energy bills this past year have averaged $125 per month with his geothermal system. That is for a five year old, all electric home with a geothermal system. That isn't bad for lights, cooking, heating water, watching TV, ham radio, computers, etc.

I've owned only two homes in my life. My Cincinnati home was a full masonry brick house (plaster inside directly attached to two courses of brick). That place was costing me $200-$250 per month during the winter for natural gas in the late seventies/early eighties. I don't like to think about what the gas bill might be these days. That's the only place I ever lived where I could find frost on a closet wall on a cold day.

There are always those who raise the that cry. I think they've always
existed. While as a much younger fellow, I admired those with the
wherewithal to own vast expanses of land, who could afford to erect
numerous towers to the sky, populated with enormous antenna arrays, I
admired more the fellows who were real pileup artists. Those could slip
in and out of a pile in the wink of an eye.

I read K3ZO's article on SO2R some time back and gathered that I don't
have the necessary skills or dollars to try it. I enter so few contests
with serious intent these days that I don't know if I want to even give
it a try. My station would require some advances in antenna
switching/control before it would even become feasible.

I'll go along with you on this one, Hans, though there have been a number of things which I thought to be unfair/unethical over the years. Among them were rubber clocking (pretty much universally outlawed now), a few fellows (notably Europeans operating from Africa) who were running multiple high power amps on multiple arrays on the same band simultaneously. The latter involved not only an unfair advantage but an illegal one.

I think I can tell the following without creating scandal now, since most of the attendees are dead: I departed a meeting of what was (at the time) a well-known Cincinnati DX Club after some old timers I'd previously admired began discussing plans for the upcoming Field Day operation. This group always operated as a low power entry. At this particular meeting they began talking about which ops would bring their linear amps. That was the first and last meeting I attended.

Interesting story but a lot of information you need to determine how
much of a problem this would be is missing.

As it sits, the use of "unused" spectrum space in the current TV
broadcast band seems to be a non-issue to us. Seems that they are at
least trying to live within the part 15 rules and are working to
detect when other users pop up on the spectrum and they are working in
a band that will be open for new use in Feb 09. As long as they keep
part 15 power levels, don't try and connect directly to long
unshielded wires hung up high and stay out of the ham radio
allocations what can we say? However if they are demonstrating
something to the FCC, it would seem that they are looking for some
kind of operational waver or rules change. Worth keeping an eye on.

When Beaverton decided to rewrite its Wireless Communications Facility ordinance about 6 years ago, I made sure that I got on the committee that was doing it (my bona fides were that as an attorney I had drafted several in California). When it came to Ham Radio issues, it was like shooting fish in a barrel - besides myself, the ATT Wireless rep was a ham, and best of all, the Assistant City Attorney handling it was the son of an active ham. As a result, no use or zoning permit is required for towers under 70 feet, and only notification is required for towers above that height. Building permits are something else, though. The main problem here are CC&Rs and HOA issues.

I'm not too worried about interference to/from amateur radio.

Users aren't going to recognize overload problems as coming from ham gear
.
The things are simply going to intermittently stop operating and they're
going to blame it on an outage of the ISP's base station. It won't play
your voice out their speakers the way it does with an analog TV set. And
they're never going to get FCC approved unless they know how to confine
their emissions to the TV channel they determined was unused. They're no
t
going to spill over into ham bands.

(at least not the legal ones. The illegal ones will spill even if the FC
C
never approves this technology.)

I'm a lot more worried about it as a TV engineer and semi-rural
over-the-air TV viewer. In early tests these things weren't very good at
determining whether a channel was unused. I can see that becoming a big
problem in semi-rural areas like this, where people might be using roofto
p
antennas to get TV but the Internet devices will probably be on makeshift
indoor aerials.

On the other hand, I'm not holding my breath waiting for someone to build a base station out here. The technology may well never come to places rural enough to be in TV fringe reception.

Amateur Radio Newsline(tm) Report 1615 - July 25, 2008

Amateur Radio Newsline report number 1615 with a release date of Friday, July 24th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Several popular digital audio programs that were pulled from the World Wide Web have returned, but with a different coding and decoding scheme. Are they as good as before? Also, hams help as hurricane Dolly hits the gulf coast, the ARRL and FCC meet to discuss B-P-L and a United Kingdom amateur radio club gets a public grant to go D-Star. Find out the details on Amateur Radio Newsline(tm) report number 1615
coming your way right now.

RADIO LAW: WINDRM AND OTHER SOUND CARD PROGRAMS GET CODEC CHANGE

Several popular digital voice programs that were pulled from distribution have returned with a different digital coding and decoding scheme. This following major rewrites to avoid problems dealing with intellectual property rights. Amateur Radio Newsline's Gary Pearce, KN4AQ, is in Cary, North Carolina, with the details:

--

Hams who tried to download any of the sound-card based Digital Voice programs - WinDRM, DRMDV and FDMDV - this past week, found them gone, as were the Google-Groups message boards that supported them.

The problem was licensing, or lack of it, for the codec that all the programs shared. That codec was developed for the US military and NATO, but was never licensed for free distribution. Several companies shared the intellectual property rights, and finally, one of them complained.

This caused a quick re-write of WinDRM and FDMDV with an open-source codec. At air-time, the new version of FDMDV was available again at the download site, N1SU dot COM, and WinDRM is expected to be back soon. DRMDV, little used since FDMDV was developed, has been dropped.

Digital Voice users will need to download the new version of FDMDV to maintain compatibility.

The new codec isn't quite as good as the old one, so audio quality, a hallmark of the Digital Voice programs, will suffer a bit. The old codec,

called MELP, was designed for high quality, low data-rate communication, and was particularly well suited for HF radio applications.

WinDRM occupies about 2.5 kHz of spectrum and sounds like FM with few artifacts when signals are good. FDMDV, uses only 1.1 kHz of spectrum. It sounds a little rougher, but still remarkable for that low bandwidth. It works closer to the noise level, and has almost no latency. Both programs use OFDM multiple carrier modulation schemes, and work with ordinary single-sideband transceivers.

This episode points out the need for someone - somewhere - to develop a codec for low-bandwidth digital voice on Amateur Radio. The sound-card based digital-voice programs have been a continuous "work in progress." But they need a codec for that work to continue.

Note that the AOR digital voice modems, and D-STAR radios, use a commercial product, the AMBE 2020 vocoder, so they are NOT affected by this license situation.

For the Amateur Radio Newsline, I'm Gary Pearce, KN4AQ.

--

More on this in future Amateur Radio Newsline reports. (ARNewsline(tm), KN4AQ)

RADIO LAW: FCC AND ARRL MEET TO DISCUSS FUTURE OF BPL

The ARRL and the FCC have met to discuss the future of Broadband over Powerline Internet access. This after an appeals court ruled earlier in the year that the FCC handled the matter of B-P-L's introduction to the U-S improperly.

On July 9, ARRL officials including President Joel Harrison, W5ZN; Chief Executive Officer David Sumner, K1ZZ, and General Counsel Chris Imlay, W3KD met with members of the FCC's Office of Engineering and Technology. According to Imlay, the meeting was hold to discuss a possible regulatory approach to BPL with the FCC. Suggestions put forth by ARRL addressed the needs and concerns of Amateur Radio operators in avoiding harmful interference from BPL systems while imposing the minimum necessary regulatory obligations on B-P-L deployments.

Imlay said, that there are at this point rules that could be adopted which would, at once, both protect Amateur Radio communications from predictable harmful interference from BPL; and permit broadband over power line systems to operate in the 3 to 80 MHz range without significant constraint and without substantial redesign or retroactive build outs.

Meantime, the United States Court of Appeals for the District of Columbia Circuit has ordered that the Federal Communications Commission \ reimburse ARRL for the docketing fee and the cost of reproducing copies of briefs and other documents in the ARRL's successful challenge of the FCC's Broadband

over Powerline rules. The Order, issued on July 9 following review of an opposition from the FCC and a reply from the ARRL, awarded the ARRL's full claim of $6,096.18. (ARRL)

RESCUE RADIO: VOIP HURRINCE NET ACTIVATES FOR DOLLY

The VoIP Hurricane Net was called up last Tuesday Evening as Hurricane Dolly threatened the U.S. shoreline. We have more in this report:

--

When hurruicane Dolly slammed into the Texas coastline on Wednesday morning, July 233rd, hams involved in the VoIP Hurricane Watch Net were already on the air. Dolly had became a Class 2 hurricane packing winds exceeding 100 miles an hour. The storm causing heavy damage to low lying areas on the border of the United States and Mexico, ripping off roofs, and leaving thousands of people without power or telephone service. Cellular service was also reportedly overwhelmed.

But hams involved in Skywarn and Hurricane Watch activities stood their ground. WX4NHC, the Amateur Radio station at the National Hurricane Center in Miami, had already activated its High Frequency network and its EchoLink, and IRLP station at 1800 U-T-C on Tuesday, July 22nd. Accordiong to Lloyd Colston, KC5FM, the VoIP Hurricane Net was called on 14.325 MHz on Tuesday evening, by Rob Macedo, KD1CY. Merecado is the Net Operations Manager. WX4NHC at the National Hurricane Center monitored the net for field reports both by radio and by VoIP.

Dolly is the second hurricane of the Atlantic season., It dropped close to a foot of rain in the first few hours after coming ashore. Hardest hit was the area South of Port Isabel in the border town of Brownsville.

After making landfall it weakened to a tropical storm on Thursday July 24th but concern remains over flooding along the heavily populated Rio Grande Valley. As we go to air on Friday, July 25th, hams across the area involved in emergency response reportedly remain on alert.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in The studio in Los Angeles.

RESCUE RADIO: UK CLUB RECEIVES GRANT TO GO D-STAR

A United Kingdom based amateur radio organization has received a grant to go D-Star. The Worthing and District Amateur Radio Club has been awarded over ï¿½9,000 in lottery funding towards new radio equipment which will serve
a large area of Sussex.

The repeaters will be located in the Worthing Borough Council buildings serving an extensive area along the Sussex Coast. They will allow digital communication both locally and worldwide using radio and internet technology.

In addition to the repeaters, part of the funding will be used to replace the club's current radio equipment with new state of the art equipment. This will include new transceivers, antennas, microphones and several other pieces of equipment.

The Worthing and District Amateur Radio Society is an organization with well over 100 members. More about it is on-line at www.wadarc.org.uk (Southgate)

**

RESCUE RADIO: SERVICENATION TO HOST 911 SUMMIT

A major conference on volunteerism and emergency preparedness will be held this September in New York City and planners hope to have both Presidential froint runners attending. Amateur Radio Newsline's Jeff Reinhardt, AA6JR, reports:

--

The two major presidential front runners have been invited to speak about the need for public service at a national symposium being held on the anniversary of the 911 terror attacks.

The ServiceNation Summit being held in New York September 11th and 12th. Planners hope it will bring together 500 leaders of all ages and from every sector of American life to celebrate the power and potential of citizen service. Planners also hope to lay out what the group calls a policy blueprint for addressing America's greatest social challenges through expanded opportunities for volunteer service.

Theres already talk on the blogs that ham radio operators could play a significant hole in some programs that ServiceNation plans to put in place. This, by providing volunteer communications for some of them. Some thoughts are that this type of involvement could breath new like into thousands of ham radio repeaters that currently lie dormant most hours of the day.

ServiceNation has invited Prseidential hopefulls Brack Obama and John McCain to speak at the event. As we go to air only Republican McCain has accepted. Also confirmed to address the meeting are New York Mayor Michael Bloomberg and California Governor Arnold Schwarzenegger. The latter has already created a cabinet level post dedicated to service and volunteering.

Look for more on the ServiceNation volunteer program and just how ham radio might fit in coming in future Newsline reports.

For the Amateur Radio Newsline, Im Jeff Reinhardt, AA6JR, in Los Angeles .

--

ServiceNation is a non-partisan organization formed to promote volunteerism by creating target groups with a goal of having 100 million citizens involved as volunteers in schools, workplaces and faith-based and community institutions each year. The summit is part of that campaign. More information on this meeting and on ServiceNation is on-line at http://www.bethechangeinc.org/servicenation (ServiceNation release and other sources)

**

ENFORCEMENT: UNLICENSED FLORIDA BROADCASTER WARNED TO CEASE OPERATION

The FCC has told a Florida resident that he must immediately cease operation of an unlicensed broadcast transmitter. One that the FCC alleges he or someone on his premises has been operating.

In its July 14th letter to David A. Keir of Lake Worth the regulatory agency says that its Miami Office had earlier received information that an unlicensed broadcast radio station on 92.5 MHz. On June 18th agents from this office confirmed that radio signals on frequency 92.5 MHz were emanating from property in the Lake Worth area that Florida records showed as belonging to Keir.

The Commission says that its records show that no license was issued for operation of a broadcast station at that location in Lake Worth, Florida. It ordered Keir to immediately cease operation of this radio station and warned him of severe penalties if he did not comply. This could include monetary fines, in seizure of the offending radio equipment, and criminal sanctions including imprisonment.

Keir was given 10 days from the date of the notice to respond with any evidence that he has been granted authority to operate the station by the FCC. (FCC)

**

ENFORCEMENT: THAT'S NOT REALLY HAM GEAR

The owner of a company that sells wireless video solutions has pulled several wireless transmitters from his website. This after the FCC issued a Citation to Georgia based Range Video for importing and marketing unauthorized wireless video transmitters and failing to file the proper FCC forms with the US Customs office and the US Border Patrol.

In its July 21st Citation sent to Vladimir Reznik who is the owner of Range Video, the FCC says that it had previously sent him a Letter of Inquiry regarding this issue. Reznik responded to that Letter of Inquiry by fully admitting that he first imported the devices in 2006 and that he continues to import the units.

Reznik went on to say that before he ships a transmitter that he switches each unit to operate only in the Amateur Radio Service bands. He also claimed that equipment that transmits solely on Amateur Radio Service frequencies is not subject to the equipment authorization requirement prior to manufacture or marketing.

But in its letter of Citation the FCC says that it appears that the seven transmitter devices marketed on Reznik's website were equipped with external toggle switches. The FCC says that if these switches are engaged it would allow operation of the device on the restricted frequencies.

The FCC has warned Reznik that if he violates the Communications Act or the Commission's Rules in any manner after receipt of the Citation, that the regulatory agency Commission may impose monetary forfeitures for each such violation or each day of a continuing violation.

Reznik was given the customary 30 days to reply to the Citation. He was directed to specify the actions he is taking so as not to violate the Commission's Rules governing the marketing of radio frequency equipment in the future. But the federal regulators really don't have to wait. All they have to do is go to the World Wide Web to find a notice on the Range Video website next to each of these units that reads:

" This item is temporary not available. The FCC is not allowing us to sell these transmitter to the USA because they can be modified to transmit on restricted frequencies."

The Range Video website notice goes on to state that all future transmitter devices shipped to the USA will have this toggle switch permanently removed by the manufacturer to allow transmission only on 910 MHz.

The FCC noted that more than 2600 of these illegal transmitters have been sold by Range Video since 2006. (FCC)

**

NAMES IN THE NEWS: K0DXC FEARURED ON KTSP TV

A teenage Minnesota ham has been featured on a local news show for his outstanding accomplishments as both a radio amateur and an athlete. 13 year old Cal Darula, K0DXC, of Waconia has been featured on Minneapolis St. Paul station KTSP in a story that highlights his love of baseball and his dedication to our world wide communications hobby.

Darula says that he has been playing baseball since he was a toddler. He discovered ham radio at age 10 when he got his Technician license . At 12 upgraded to General, and he has since worked the world using mainly Morse. In fact, Cal can handle Morse at speeds up to 30 words per minute.

In the KTSP news item, K0DXC says that ham radio is really a hobby for people of all ages. He also says that it has also helped him to become a straight A student in school.

In addition to his love of Morse, Cal Darula is a member of the ARRL, FISTS, the Minnesota Wireless Association, the Young Amateur Contest Ham Team and World Wide Young Contesters. He is also the ARRL Minnesota Youth Assistant Section Manager.

You can see the complete news item featuring Cal Darruls, K0DXC, on line http://kstp.com/article/stories/S519423.shtml?cat 6 (KQ0NN)

**

NAMES IN THE NEWS: ART BELL W66OBB INDUCTED INTO THE NATIONAL RADIO HALL OF FAME

A word of congratulations to ham radios own Art Bell, W6OBB. This on word that he has been inducted into the National Radio Hall of Fame as a part of the hall's class of 2008.

In its press release the Hall of Fame said the following about W6OBB:

"Showing an early interest in radio, Art Bell became a licensed amateur radio operator at the age of 13. In 1989, he was offered a five hour time slot in the middle of the night by KDWN in Las Vegas. The original format was a political talk show, but Bell switched the focus to paranormal-themed topics in the mid 1990s.

At its peak, "Coast to Coast AM" was syndicated on over 500 stations and enjoyed an audience of 15 million. While Bell has reduced his schedule, he still occasionally hosts the weekend edition."

Others inducted along with Art Bell include radio legands Charlie Tuna and the late Dick Wittinghill. Art Bell, W6OBB, can usually be found on 75 meter SSB when he takes to the ham radio airwaves. (RW)

**

THE SOCIAL SCENE: AUSTIN SUMMERFEST CELEBRATES 25 YEARS

Austin, Texas will be the spot to be on August 1st and 2nd for the 2008 Austin Summerfest ham radio show. 2008 marks the 25th anniversary of the Summerfest and to mark the event planners has set up an entire roster of happenings. These include presentations and meetings, a swapfest and lots of prizes.

The venue is the Wyndham Garden Hotel and Conference Center off Interstate 35 and Woodward Street, in Austin. More information is on-line at www.austinsummerfest.info (Via e-mail)

**

THE SOCIAL SCENE: DUKE CITY HAMFEST

The 2008 Duke City Hamfest takes place in Albuquerque, New Mexico, August 15th and 16th. Its venue this year is the Sandia Baptist Church on Constitution Avenue in the North East Heights area of the city. Admission is free but banquet tickets are not included. This years banquet speaker is ARRL's Emergency Preparedness and Response Manager Dennis Dura, K2DCD.

Talk-in for the Duke City Hamfest is on the local 145.33 and 444.0 Mhz repeaters. Both require a 100 hertz access tone. More information is on the web at www dot qsl dot net slash dchf or by snail mail to the Duke City Hamfest, P.O. Box 30394, Albuquerque, New Mexico, 87190. (Via e-mail)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

THE CHANGING OF THE GUARD: BOB SIEVERS. W9FJT - SK

A radio legend has become a Silent Key. Amateur Radio Newsline's Jim Davis, W2JKD, has the story of the passing of Mr. WOWO:

--

The ham known as Fort Wayne, Indiana's "Mr. WOWO" became a silent key last fall, but its only now hit the ham radio community that radio legend Robert Bob Sievers was also one of us and held the call W9FJT

Bob Sievers spent five decades with WOWO as host on the very popular morning shows "Little Red Barn Show" that aired from 5 to 7 a.m., and the
Bob Sievers show that was on from 7 to 10 a.m..

Sievers started his career at WOWO in 1932 as an unpaid announcer for a morning gospel while he was still a freshman at South Side High School. He was hired as a morning announcer in 1936, for $5 a week while still in high school.

The only break Sievers took from the station was when he served in the U.S. Navy. He did four years during World War II and two years during the Korean War. After his enlistment's ended it was back to W0WO where the stations 50,000-watt signal put Sievers' voice into 28 states and even overseas. He often received reception reports from listeners that included missionaries in places as far away as Africa.

In 1981 Bob Sievers was Inducted into the Indiana Broadcasting Hall of Fame. He retired from WOWO in 1987 after more than 50 years at the station.

In the world of amateur radio, Bob Sievers W9FJT had an equally big voice, though not quite as powerful as that of WOWO. He enjoyed 160 meter AM operation using an RCA transmitter that was retired from WOWO. W9FJT gave it a second life and his rich broadcasters voice became well known on Top Band.

For the Amateur Radio Newsline. I'm Jim Davis, W2JKD.

--

Bob Sievers, W9FJT, became a Silent Key on September 3, 2007. A note posted to his QRZ.com listing simply say that he will be greatly missed by all his friends. (W2JKD and various other sources)

**

HAM HAPENINGS: QCWA ELECTION RESULTS ANNOUNCED

Bob Roske, N0UI, will be the next Preident of the Quarter Century Wireless Association succeeding John B. Johnston, W3BE, in that post. Roske, a longtime Q-C-W-A Board member from Hutcninson, Minnesota, beat out Len Nathanson, W8RC, by a close vote of 1037 to 991.

Elected as QCWA Vice President is Ken Oelke, VE3AFO, of Calgary, Alberta, Canada. Walt Supina, N3WS, of State College, Pennsylvania was selected as Secretary and Frank Harris, WA4PAM, from Clewiston, Florida as Treasurer. 12 directors were also elected or re-elected as well. (QCWA)

**

EMERGING TECHNOLOGY: WIN A SOLAR POWERED RADIO FROM RNW

To mark the launch of its SMS texting service, shortwave broadcaster Radio Netherlands is offering liteners the chance to win a solar-powered shortwave radio and lots of Radio Netherlands Worldwide goodies. All you have to do is text the answer to a very simple question, plus supply your

name and email address. Full details are on line at a special Radio Nretherlands website at www.radionetherlands.nl/radioprogrammes/080714-sms-rnw-programmes (Media Network)

**

EMERGING TECHNOLOGY: VIDEO GAME HELPS TEENS FIGHT CANCER

Science OnLine reports on a new video game designed to give young cancer patients a sense of power and control over their disease. Re-Mission is the 3D game described as a 20 level journey through the bodies of fictional patients with different types of cancer.

Players control a nano robot named Roxxi. Its task is to destroy cancer cells, battle bacterial infections, and manage realistic, life-threatening side effects
.
But the game is more than a fun challenge. Studies show that young cancer patients who play the Re-Mission are more likely to take their medicine, undergo needed therapy and understand their illness. Thats because the game is geared to help teenagers better adhere to their cancer treatment and embrace vital behaviors to improve their health.

For more information on Re-Mission is available on-line at www.CIGNA.com/Re-mission. (Science OnLine)

**

RADIO RESEARCH: NEW 2 METER BEACON IN NC

A new two meter propagation beacon has become operational from Oriental, North Carolina. Its callsign is N7BHC slash B and it operates Morse on 144.290.8 MHz. Power out is 50 watts at the antenna which is a KLM yagi pointing 70 degrees. QSN reports go to n7bhc_ob_remote@carolina.rr.com (VHF Reflector)

**

WORLDBEAT - NEW ZEALAND: WAITAKERE SPRINTS TO CONTINUE

New Zealand's Papakura Radio Club inc. has announced that the Waitakere Sprints will continue. The dates of these mini-contests will be the same as previously held. The Phone Sprint will be on the last Saturday in July and the CW Sprint will be on the first Saturday in August. Both are one-hour duration on 80 meters and are open to all licensed amateurs in New Zealand, Australia and the Oceania call areas. (Papakura Radio Club)

**

DX

In DX, EP3BN is reported on from Iran. Listen out for him on 20 meter SSB between 13:30 and 16:00 UTC. QSL via JH1NBN.

The Hong Kong Amateur Radio DX Association will use the special call VR2008O on 40 through 6 meters during the upcoming Olympic Games. Operations will use SSB, RTTY and PSK31 through August 31st. QSL direct only by VR2XMT, Charlie Ho, P.O. Box 900, Fanling Post Office, Hong Kong..

LA3OHA, will be staying in Caucasus through September. He will operating on several bands and looks for QSLs during his time there. If you work him QSL to Terje Hovde, P. O. Boks 58, 0102 Tbilisi, Georgien.

Lastly, DL5XX, is on a business trip to Ghana through August 10th and will be active on CW on all bands as 9G5MM. Equipment is IC-706 and 1 kW power amplifier feeding a G5RV antenna. More information is on-line at www.rrdxa.eu/9g5mm .

(From various DX news sources)

**

THAT FINAL ITEM: THE RADIO SPEEDGUN KID

And finally this week, since police can't be everywhere an 11 year old armed with a toy radio spredgun is filling in the gaps. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

His name is Landon Wilburn. He is only 11 but he stands tall against speeders.

As he recently told the Louisville Courier-Journal newspaper, he used to shout at speeders to slow down. Then Landon got a better idea.

Dressed in a reflective vest, wearing a bicycle helmet and armed with a Hot Wheels brand radar gun, he points it at cars speeding through the sub-division where he lives and records the speed of passing traffic.

One of the subdivision residents is George Ayers. He told the newspaper that he has seen drivers lock up their brakes when they saw Landon clocking them.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the studio in Los Angeles.

--

Officials say the city will install speed bumps in the neighborhood if 70 percent of residents agree and are willing to put up half the money. Until that happens Landon, toy radio speed gun in hand, will likely continue to do his part to get speeders to slow down. (courier-journal.com)

I wish I could say the same for my area. Many of the largest, most expensive houses have very little insulation. There is a dead giveaway - after a snowstorm, they are the first houses to lose the snow on the roof. A good bit of my wife's work comes from designing remodels on 2 or 3 year old McMansions.

I think maybe that during the 80's and early 90's home construction related to insulation was pretty good, but as the housing market took off, and people seemed to be willing to buy anything for any amount of money, the quality dropped.

Many of them offer geothermal

It is truly impressive what can be done with a little work. The caveat it that when you have a tightly sealed house, you have to be very careful about chemical exposure. My sister has something fairly similar. She lives in a large modified A frame with one side all glass. Has a wind generator, Geothermal heat system, and uses a wood pellet stove for the comfy glow you get from radiant heat. She lives on the first hill south of Lake Erie shore near Erie, so there is always some wind.

I would love to be able to put up a tower in the back yard

Wow, Mike, I don't know of many houses anywhere which are being built with other than 2x6 walls. Ceiling insulation is, of course, one of the cheapest and easiest things to fix. You can always add more. It is tougher to do much about wall insulation if the wall is already full of the stuff.

Maybe folks in some areas aren't paying enough attention to the plans they see from their contractor.

It can be an issue, especially for the first couple of years with the
new flooring, carpeting and the like.

She's a good bit straight north of us. I wouldn't want to do an Erie
winter.

In talking to those who know, those geothermal systems can easily be
retrofitted to existing homes. They cost a couple of thousand more than
if installed at the time the home is built. For small yards, the drill
vertical holes rather than horizontal trenching.

>
> I would love to be able to put up a tower in the back yard

And there's simply no way to do it? Did I miss something? I thought
you had no antenna restrictions. The Indiana fellow I wrote about is
W8RHM. He's in farming country near Milan and is populating the first
of his two heavy duty crank up towers. Roger will have hard line runs
from the tower bases to the house. He has metal bulkheads fitted with
antenna and rotor cable disconnects.

No, that was the typical monthly bill in winter. I never got on the
even billing plan. I liked having lower rates in summer for a few months.

I eventually installed a wood stove system but that was messy coming
into the basement and messay hauling the ashes out. The upstairs never
got warm enough at night though the first floor and the basement shack
were toasty. Almost all of the basement except for a 10x10 storage area
and the laundry room was ham shack. Collecting boat anchor rigs takes
lots of ROOM.

You may write those things on my grave stone!

I saw Al's daddy once when he flew into the Palm Beach County airport in
late 1957 or early 1958.

I plan to create some massive carbon footprints when the Consol Coal
Company buys me out (that could be anywhere from now until eight years
away). Those carbon diggin' rascals are buying people out right and
left at rather handsome prices. When my carbon ship comes in, I plan to
live out my days in showy ostentation. I'd planned on two of those
heavy duty crank up towers with the tilt feature but if Consol's price
is right, I may opt for three. Of course you always have to plan for
the event that the coal company changes its mind. If that happens, I'll
be a little less ostentatious and will just retain my two Rohn 25 towers

and will continue to burn free natural gas like it was goin' out of style.

73,

According to an article in Moble Radio Technology magazine recently,
there's another issue in some areas (about ten major metro areas)
where various public safety agencies have already been authorized to
use the white space in the channel 14-20 range for various types of
public safety communication.

Some of these applications (e.g. video surveillance cameras) are
designed to be "indetectable" while in operation... which makes things
problematic for the proposed free-white-space-detection devices. The
police would be unamused by having their stakeout-surveillance video
feed stomped upon by web-browsing passersby!

The quick solution to this is to forbid the use of free-white-space
devices in this frequency range, in those cities where public safety
operations have already been authorized. This won't necessarily solve
the problem, if (for example) a user of such a device brings it from a
"wide open" city into a city with restrictions, and doesn't realize
that s/he has to change the device's mode to stay legal.

The pro-audio industry is also up in arms over these whitespace
proposals, as they've been depending for years on Part 15 (or similar)
wireless microphones which operate in the unused TV channel
frequencies. Having to face competition for these frequencies from a
whole bunch of non-coordinated new "find a 'free' frequency and camp
on it" devices could cause problems for them, to say the least!

I had to chuckle at the part where she holds the camera on herself at arms length. High budget reportage.

I also was in awe of the publc safety aspect touted by the one engineer. First responders, yada yada. Of course they could use it.

The manager who is talking about having a product out in less than a year, after tehy know what the "rules" are.

Finally the last guy in the red shirt who basically says that what they have doesn't work.

Golly, if it doesn't have to work, I could have something on the market in a week or so <evil grin>

>
> I'm not too worried about interference to/from amateur radio.

This isn't too likely to interfere with Amateur radio. Of course, I don't think it is too likely to work either. Given the nature of UHF, the system will have to look at the possible occupation of a frequency at both the broadcast site and receiver site. Picket fencing can be an issue. Let's take a look at a potential experience.

The home system (digital signal source) and receiver system (laptop) look around for a clear space. Say they find one. I am guessing that there is some sort of Pre-communication going on on some dedicated frequency. So they find a clear frequency. They start exchanging packets. Now the laptop moves and a picketed signal shows up, or say the local church starts it's Saturday evening service. So now the home system and the receiver system have to search around for a new frequency. Maybe they find one, and maybe they don't.

Immediate thoughts come to mind:

These systems have to be in some kind of communication to begin with. I suppose that the laptop could just start transmitting on different frequencies, hoping to hit the home system, but that would be a long process.

Talk about a system ripe for interference. There could be a new game in town, the opposite of Wardriving. If all it takes is another signal on the same frequency to start a search for a clear one, some social misfits might just have fun with a sweep generator. Keep the system hopping, and it will never settle on a frequency.

Is is possible that this is another setup put together by digital engineers as opposed to RF engineers?

So I agree with Steve that it is likely to be another BPL. This one might get a little further before failure though, as I think ARRL's efforts went a long way toward getting BPL marginalized. Obviously we won't be spending our money on a problem that won't directly affect Hams. But it has th esame problems, likely interference, lack of robustness, and probably won't help th epeople touted as the beneficiaries.

Just my .$0.02

And how! Here we have had people "build" a house and move to th earea
after it was finished. Did you ever see those commercials where someone
says "Just tell me what to do!" That was them. In boom times, some not
very good contractors show up, and when coupled with those inattentive
buyers, a lot of really poorly constructed houses have been put up.

She agrees! The odd thing about Erie is that the part right next to the shore isn't too bad, but within a mile of the shore, it gets brutal. The odd thing is that they hope for cold winters, so that the lake freezes over and stops putting so much moisture in the air.

In the summer it is gorgeous though, so they get a little compensation.

Oops, wrong context. I'd love to put up a tower in *her* back yard. It's just about the highest place in that neck of the woods. Of course I'd have to travel to Erie to do it.

I can still do it in our yard if I wanted to.

Okay, that is still quite the bill for the time.

Don't you have access to Natural gas now from the gas company? Sounds like Karma compensating for the earlier expense.

Wood does indeed heat you several times - cutting it, splitting it, stacking it, burning it, and hauling it out at the end. Yet still, I like our fireplace.

==> ARRL Board of Directors Plans the League's Future at Second 2008 Board Meeting

The ARRL Board of Directors held its Second Meeting of 2008 July 18-19 in Windsor, Connecticut, under the chairmanship of President Joel Harrison, W5ZN. Radio Amateurs of Canada President David Goodwin, VO1AU/VE3AAQ, was a guest of the Board. The Board considered and acted on a number of organizational and Field Organization issues as well as regulatory and operating matters.

Organizational Issues

ARRL Strategic Plan: The Board voted to develop a timeline to review and revise the ARRL Strategic Plan. The Board directed Chief Executive Officer David Sumner, K1ZZ, to release the Plans long-range goals to the membership and to solicit comments from members on the future direction and priorities of their national organization. Member input will be considered by the Board at its Annual Meeting in January 2009. At the Second Meeting in July 2009, the Board will review and revise the Plan. The current Strategic Plan was adopted by the Board in October 2006.

2009 ARRL National Convention: The Board voted to hold the 2009 ARRL National Convention at the Dayton Hamvention(r). Carl Rose, K8CPR, chair of the Dayton Hamvention Committee, extended an invitation to the League to hold its convention at Dayton May 15-17, 2009. The last ARRL National Convention was in 2007 at the Huntsville Hamfest.

ARRL Web Redesign: Fathom, a Web Development company based in Hartford, presented their plans for a new design for the ARRL Web site.

Field Organization

Improvements to Resources Available to Section Managers and SM Candidates: Following a report by the Boards Programs and Services Committee, which included the results of a Section Governance Study and survey, the Board voted to direct staff to implement a Section Manager candidate nomination package that is similar to the current Board nomination package. The Board also voted to direct the Membership and Volunteer Services Department to review the three surveys of Section Managers conducted as part of the Section Governance Study to attempt to identify beneficial and practical modifications to resources available to Section Managers and Field Organization processes.

The Board defeated a motion that would have extended Section Manager terms to three years and begin all terms on January 1. The Board directed ARRL HQ staff to implement an online method for Official Observers to file reports that could then be delivered from ARRL headquarters on behalf of the OO.

Operating Issues

The Board voted to create a Triple Play Award. This new award, set to be implemented by January 2009, will be given to those amateurs who achieve Worked All States (WAS) on voice, CW and digital modes. All 150 QSLs must be exclusively via Logbook of The World (LoTW). Only those contacts made after the awards start date will be eligible. The Board also acted on the Programs and Services Committee report, voting to eliminate Rule 5 from Section III of the DXCC Rules. The Committee realized that while publishing log data can have a detrimental effect on operating awards, it was not possible to control such actions and the rule cannot be enforced. As part of an effort to maintain the integrity of operating awards programs, the

Board called on staff to create resources and guidelines for QSLing and for QSL managers. These guidelines will help people who QSL to understand the "best practices" and help to support the work of the QSL manager so that access to log data won't degrade Amateur Radio's long tradition of the honor system.

Regulatory Matters

The Board voted to establish an ad hoc study committee to review Part 97 of the rules governing the Amateur Radio Service to ascertain what rule change(s) would be beneficial to promote wideband digital modes, while at the same time minimizing potential interference to narrowband modes.

Other Items

Awards

Hiram Percy Maxim Award: The Board selected Jim Fagan, KE7IDC, of Tucson, Arizona, as the recipient of the 2007 Hiram Percy Maxim Award.

Technical Excellence Award: The Board chose John Stanley, K4ERO, of Rising Fawn, Georgia, as the recipient of the 2007 Doug DeMaw, W1FB Technical Excellence Award.

Instructor of the Year Award: The Board selected Doug Loughmiller, W5BL, of McKinney, Texas, as the recipient of the 2008 Herb S. Brier Instructor of the Year Award.

Technical Innovation Award: The Board chose Dave Bernstein, AA6YQ, of Wayland, Massachusetts, as the recipient of the 2008 ARRL Technical Innovation Award.

McGan Memorial Silver Antenna Award: The Board selected Walter Palmer, W4ALT, of Lewes, Delaware, as the winner of the 2008 Philip J. McGan Memorial Silver Antenna Award for excellence in public relations.

Technical Merit Award: The Board conferred the ARRL Technical Merit Award on Ed Hare, W1RFI, ARRL Laboratory Manager.

Partnership with VanityHQ: The Board decided to partner with the VanityHQ Web site to get the ARRL Silent Key data that was published in QST included in the VanityHQ Web site history project in an electronically searchable format.

The complete Minutes of the 2008 Second Meeting of the ARRL Board of Directors is available at <http://www.arrl.org/announce/board-0807/>.

The next meeting of the ARRL Board of Directors is scheduled for January 16-17, 2009.

==> HIRAM PERCY MAXIM'S TELEGRAPH KEY RETURNS TO ARRL HQ

At the ARRL Board of Director's meeting this past weekend, the telegraph key that once belonged to Hiram Percy Maxim, W1AW, was returned to ARRL Headquarters. According to ARRL First Vice President Kay Craigie, N3KN, the key had been in the collection of the Antique Wireless Association's Electronic Communication Museum near Rochester, New York for more than 20 years.

Craigie said that the AWA decided to return Maxim's key to the organization he co-founded almost 100 years ago. At the ARRL Atlantic Division Convention in May 2008, the museum's former curator, Ed Gable, K2MP, presented the key to Craigie and Atlantic Division Director Bill Edgar, N3LLR. Craigie and Edgar then presented the key to ARRL President Joel Harrison, W5ZN, and ARRL Chief Executive Officer David Sumner, K1ZZ, on Friday, July 18.

"The key will find a prominent place in the League's collection of historical artifacts," Craigie said. "The Old Man's key has come home".

==> AMSAT-UK COLLOQUIUM TO TAKE PLACE THIS WEEKEND

The 23rd Annual AMSAT-UK International Space Colloquium will be held July 25-27 at the University of Surrey in Guildford, about an hour's drive from London <http://www.uk.amsat.org/content/view/32/42/>. The Colloquium is a chance to talk to satellite designers and builders, as well as a place to discover how to use Amateur Radio satellites. A beginner's session on satellites is held prior to the formal opening on the first day of the event.

Chairman of AMSAT-UK Sir Martin Sweeting, G3YJO, will open the Colloquium on Friday, July 25. This will be followed by the keynote speech, given by Coordinator of the UK Lunar Penetrator Consortium Rob Gowen of University College London's Mullard Space Science Laboratory. He will present on "Science Penetrators for the UK MoonLITE mission."

There will be presentations from AMSAT-DL on both the eagerly awaited P3E High Earth Orbiting Satellite and the pioneering Mars Orbiter P5A during the event. According to colloquium organizers, the P5A is the first private venture spacecraft to travel to the Mars, providing radio amateurs with some true DX signals. The Delfi-C3 team will also be giving presentations on their new satellite. Its SSB/CW 435/145 linear transponder is due to be activated soon. The IARU Satellite Forum -- chaired by the IARU Satellite Adviser and President of AMSAT-SA Hans van de Groenendaal, ZS6AKV -- will also take place during the Colloquium.

The Colloquium will be streamed live on the Internet, thanks to the British Amateur Television Club (BATC) <http://www.batc.org.uk/>. According to BATC President Peter Blakeborough, G3PYB, the club will facilitate streaming video of the presentations live to the Internet so that radio amateurs and shortwave listeners can watch from anywhere in the world. As well as the live Webcast, BATC will also be

providing a "live chat" Web page, enabling viewers to post messages. Interested viewers can find the streaming video at <http://www.batc.tv>.

More information about AMSAT-UK's 23rd Annual Colloquium can be found on the AMSAT-UK Web site <http://www.uk.amsat.org/content/view/32/42/>.

==> FCC Issues Citation to Georgia Company for Selling, Importing Unauthorized RF Devices

On July 21, the Federal Communications Commission issued a Citation <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-08-1685A1.pdf> to the owner of a Georgia company for selling unauthorized radio frequency devices (specifically wireless video transmitters) and importing radio frequency devices without filing the proper FCC forms with the US Customs office and the US Border Patrol.

The FCC found that Vladimir "Vova" Reznik, owner of RangeVideo <http://www.rangevideo.com/>, was "marketing in the United States unauthorized radio frequency devices, specifically, wireless video transmitters." The Commission sent Reznik a Letter of Inquiry (LOI) regarding this and noting the following specific items he had for sale on the RangeVideo Web site: 900 MHz 100 mW audio/video transmitters; 900 MHz 500 mW audio/video transmitters; 1.3 GHz 300 mW audio/video transmitters; 2.4 GHz 200 mW audio/video transmitters; 2.4 GHz 500 mW audio/video transmitters; 2.4 GHz 1000 mW audio/video transmitters, and 2.4 GHz 1000 mW cased audio/video transmitters.

According to the FCC, the 900 MHz devices are capable of operation on 980 MHz, 1010 MHz and 1040 MHz; the 1.3 GHz device is capable of operating on 1240 MHz, 1320 MHz and 1360 MHz, and the 2.4 GHz devices are capable of operating on 2490 MHz. "Thus, these transmitter devices cannot comply with the FCC's technical standards and therefore cannot be certified or marketed," the Citation reads.

Reznik responded to the LOI, admitting that he first imported the devices in 2006 and that he continues to import the devices. The FCC noted that he admitted to selling more than 2600 of the transmitters since 2006. Reznik also admitted to not filing the proper forms with the US Customs Office or the Border Patrol.

The FCC also noted that Reznik stated that before he ships a transmitter device, he "switches" it to operate only in the Amateur Radio Service ('ARS') bands. While radio transmitting equipment that transmits solely on ARS frequencies is not subject to the equipment authorization requirement prior to manufacture or marketing, it appears that the seven transmitter devices marketed on your website are equipped with external toggle switches on the unit, which if engaged would allow operation of the device on the restricted frequencies."

In 1996, the FCC's Office of Engineering and Technology (OET) released a Public Notice "to clarify the Commission's Rules regarding equipment intended to operate in various radio services in the high frequency radio spectrum, including 10 meter Amateur Radio Service equipment" <http://www.fcc.gov/Bureaus/Engineering_Technology/Public_Notices/1996/pnet6023.txt>.
The Notice states that transmitters intended for operation on non-amateur frequencies "must be approved prior to manufacture, importation or marketing." The Notice specifically includes Amateur Radio Service transceivers to be designed "such that they can easily be modified by the users to extend the operating frequency range into the frequency bands" of other non-Amateur Radio Services among those devices, subject to equipment authorization procedures.

The Notice also states that the FCC considers these transceivers as intended to be operated on frequencies where the use of type accepted equipment is required "because of the simplicity of modifying them to extend their operating frequency range." According to the Citation, "the transmitter devices listed on `Reznik's` website require a grant of equipment certification prior to the initiation of marketing in the United States, but, as noted above, cannot be certified because they operate on restricted frequencies."

Reznik has the following legal disclaimer posted on the RangeVideo Web site: "high power video transmitters operate in the Amateur Radio Service (ARS) frequency band, and according to FCC regulations users must obtain proper licensing for legal operation. There are no restrictions on the sale of this equipment, however RangeVideo urges users to become familiar with and observe all laws and regulations governing ARS licensing and the operation of ARS equipment. Please visit the FCC's Website for more information <http://www.rangevideo.com/index.php?main+AF8-page=page+ACY-id=5>. He then gives the FCC's Web site address that discusses how to receive an Amateur Radio license <http://wireless.fcc.gov/services/amateur/licensing>.

The FCC warned Reznik that if he violates the Communications Act or the Commission's Rules "in any manner described herein" after receipt of the Citation, "the Commission may impose monetary forfeitures not to exceed $11,000 for each such violation or each day of a continuing violation." Reznik was given 30 days to reply to the Citation, either through a personal interview at the FCC's Atlanta Field Office or via a written statement. Through the Citation, Reznik was told that his response "should specify the actions that you are taking to ensure that you do not violate the Commission's Rules governing the marketing of radio frequency equipment in the future."

==>SOLAR UPDATE

Tad "Turn thy wild wheel through sunshine, storm, and cloud" Cook, K7RA, this week reports:

For several days over the past week, we saw a couple of sunspots -- but just like other recent dying Solar Cycle 23 spots, they faded quickly. This group, lasting from July 18-20, was number 1000. No sign of Solar Cycle 24 in recent memory, just a couple of false starts. There are no predictions indicating more sunspots for the upcoming week. Predicted planetary A index for the near future is 5, with a slight increase to 8 on August 1 and a large increase to 20 on August 8. Geophysical Institute Prague predicts quiet geomagnetic conditions through the end of the month, except July 27, which is quiet to unsettled. Sunspot numbers for July 17-23 were 0, 11, 12, 11, 0, 0 and 0 with a mean of 4.9. The 10.7 cm flux was 65, 65.3, 66.4, 65.9, 66.2, 65.8 and 65.5 with a mean of 65.7. Estimated planetary A indices were 5, 5, 3, 3, 6, 11 and 16 with a mean of 7. Estimated mid-latitude A indices were 3, 5, 1, 2, 5, 9 and 12 with a mean of 5.3. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Alfred, Lord Tennyson's "Idylls of the King."

_____
==>IN BRIEF:

* In Virginia, ARES = RACES: On July 3, Virginia officials, along with representatives from that state's ARES and RACES groups, signed a new Memorandum of Understanding (MOU) <http://www.aresva.org/pdf/VDEM_ARES_MOU_3_July_2008.pdf> uniting the three groups. State Coordinator, Commonwealth of Virginia Department of Emergency Management (VDEM) Michael M. Cline; State RACES Officer Mac McNeer, K4YEF; ARRL Virginia Section Manager Carl Clements, W4CAC, and ARRL Virginia Section Emergency Coordinator Ron Sokol, K4KHZ, signed what ARRL Emergency and Preparedness Manager Dennis Dura, K2DCD, called a "precedent setting" document.

* Hams Active as Hurricane Dolly strikes Caribbean, then Texas: The Hurricane Watch Net wound up about 19 hours of operation, experiencing some of the worst band conditions we've seen in many years. Most of the traffic to the National Hurricane Center on 14.325, was relayed off of 40 meter frequencies by Bob, K5SIV. The Net also put out regular advisories to those in the affected area in English and Spanish. -- tnx John Ellis, NP2B, Section Manager, Virgin Islands Section

Later, as Hurricane Dolly made landfall near Brownsville, Texas, on July 23, the VoIP Hurricane Net was active for a 24-hour period, reports Rob Macedo, KD1CY, of the VoIP Hurricane Net. We had N5CCW on the air from the National Weather Service in Corpus Christi, Texas, and W5DCH from the Driscoll Childrens Hospital EOC and several other Amateurs from the Corpus Christi, Texas area. They assisted with relaying reports from their area as well as from the affected area of Brownsville, Texas which included sustained hurricane force winds

with gusts to 105 MPH. We owe a debt of gratitude to these stations for being on the system with us despite their pressing issues locally, said Rob Macedo, KD1CY, Director of Operations for the VoIP Hurricane Net. The Driscoll Childrens Hospital briefly went to a code black emergency mode as a tornado, related to the outer rain bands of Dolly, was sighted near the hospital. The code black was lifted after it was determined the hospital would not be affected by the tornado. Lloyd Colston, KC5FM, relayed rainfall reports in excess of 10 inches from the Texas Emergency Net. Those reports were then relayed through the VoIP Hurricane Net to the National Hurricane Center.

* This Weekend on the Radio: This weekend, the NCCC Sprint Ladder is on July 25 and the RSGB IOTA Contest is on July 26-27. Next weekend, the TARA Grid Dip Shindig and the European HF Championship are on August 2. On August 2-3, look for the 10-10 Int. Summer Contest (SSB), the National Lighthouse Weekend QSO Contest, the ARRL UHF Contest and the North American QSO Party (CW). The RSGB RoPoCo 2 and the SARL HF Phone Contest are both August 3. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* W1AW/KL7 QRV: Special event station W1AW/KL7 will be on the air from grid square BP56 July 26-August 10 on all bands from 160-6 meters. This ARRL 2008 Alaska State Convention Special Event Station plans to run two HF stations operating CW, SSB and digital, one satellite station and one station devoted to 146.52 MHz.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 3, 2008 for these online course sessions beginning on Friday, August 15, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Registration remains open through Sunday August 24 2008, for these on-line course sessions beginning on Friday September 5, 2008: Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing

helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News July 25: There will be no ARRL Audio News on Friday, July 25. The ARRL Letter will be available that day. ARRL Audio News will return on Friday, August 1.

* FAR Scholarship Winners Announced: The Foundation for Amateur Radio (FAR) has announced the 2008 winners of 55 scholarships it administers. The scholarships were open to all licensed radio amateurs who met the qualification and residence requirements of the various sponsors. A non-profit organization incorporated in the District of Columbia, FAR represents more than 50 Amateur Radio clubs in Maryland, the District of Columbia, Virginia, West Virginia and Pennsylvania. It is devoted exclusively to the scientific, literary and educational pursuits that advance the purposes of the Amateur Radio Service. For a complete list of recipients, please see the ARRL Web site <http://www.arrl.org/news/stories/2008/07/19/10214/?nc=1>. For more information, contact FAR Scholarships, PO Box 831, Riverdale, MD 20783, or visit their Web site <http://www.amateurradio-far.org/>.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery: ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Hey, ARRL listens, but they listen slowly!

I proposed the "USA Triple Play" award to them in 2004.

Right. Apparently, regardless how much insulation is installed between the studs, if the house isn't very well sealed, that insulation's effectiveness is going to be reduced. I asked a builder in NY what their typical R-value is. He said it's not about R-value, but how well the house is sealed, inside and out. If I do have a new house built when I move to 1-land, it'll have expanding foam insulation to make sure the exterior shell is all well-sealed. That'll be done after the coax and ladder-line feed throughs are installed, of course. :-)

My XYL alsp takes a dim view of some of the more gaudy antennas. I've bounced ideas off her, and over time have come up with what is acceptable. I've ended up with wire dipoles, a J-pole for 2 meter repeater work, and a Butternut vertical.

The Butternut was bought at a Hamfest for a paltry 35.00 It needed one of the tube insulators and a HV cap. Simple stuff. I took a chance and we made a deal if she didn't like it, I'd take it down. Oddly enough, it didin't bother her as much as I thoght it would - it only got the "rolled eyes" treatment. So we kept it.

Doesn't she know that the best place is down the hill a bit? Warmer in winter, and less likely to have lightning strikes? hehe

Dave, that's old news, at least 30 years old .It was originally pushed by the Los Angeles Sheriff's Department which up until that time had been using VHF low-band (39 MHz) equipment.

The so-called T-Band is almost totally loaded in the major metropolitan areas authorized for same (See FCC Rules Part 90, Sub part L). This spectrum is allocated in such a manner as to protect existing TV stations.

These are one type of systems that our company designs for public-safety clients. Many agencies are asking the FCC to reassign unused commercial channels in the T-Band for Public Safety use. We're in the thick of that. What we are trying to do also is to get the FCC to expand the radius around the authorized cities as urban growth moves outward.

They'll probably have to ban them from T-band altogether. But see below.

One proposal I saw would require wireless-microphone users to transmit a
"beacon" signal at some predetermined location within the TV channel. Th
e
white-space devices would monitor for this beacon.

(both the DTV and analog TV standards essentially already have beacons)

So I suppose you could have the public-safety organizations also transmit
the beacons.

Yes, sometimes I get the impression the pro-audio folks are more upset
about this than the broadcasters.

I think the problem you're going to have (with both of those projects) is
that the compression of the TV band is going to make unused channels in
T-band less common. And especially in the areas outside the existing
radius where you'd like to expand it.

I think the argument you'll get is that 24MHz above channel 51 has alread
y
been set aside for public-safety, should it really need more below channe
l
21?

I know of no such referendum. I have to presume TWIAR misinterpreted
something...

See the official Mexican government list:
http://www.cofetel.gob.mx/wb/Cofetel_2008/Cofe_canales_de_television_digi
tal_in

which shows eight stations in Mexico City; five in Guadaljara; and six in
Monterrey. None of these are close enough to the border to have any
audience in the U.S.. (except, possibly, for the Monterrey stations
during tropo openings!)

This list correlates well with press releases like this one:
http://broadcastengineering.com/RF/Grupo-Televisa-Mexico-DTV-20060222/

which indicate that as of two years ago, DTV transmitters were already
installed and operating in the three major interior cities. (and Tijuana
)

Believe it when you see it...

BPL was promised as the way to get broadband to rural residents. Never
saw any of it deployed in rural areas - all the test systems ended up in
suburbia.

Hi John. What are the technical aspects of these systems that will do this? I read what they are doing, and what they have done so far to be technically not so good. It appears that the concept is flawed.

>From what I can piece together, it looks as if the main concept treats the RF spectrum as if it were wired for digital. That will not work.

Simple Wi-Fi and other digital transmission setups in use now are not close to the same. The system that comes closest in likely performance is cellular net access. That uses compression rather than frequency agility of course.

This is a presumed frequency agile system that won't interfere with other signals already on the band. If it works, one possible outcome is that no available frequency will be found, and no connection made. Failure is a built in option!

Some of them are. And the effectiveness of those things is highly dependent on the quality of the work and the design of the house. I've seen/heard of some pretty shoddy work in newer homes.

>Many of them offer geothermal
> heating/cooling systems as well.

Geothermal is the way of the future for both A/C and heating in many places.

>One of my pals lives in Indiana. His
> total energy bills this past year have averaged
> $125 per month with his
> geothermal system. That is for a five year old,
> all electric home with
> a geothermal system. That isn't bad for lights, cooking, heating

But how many kWh per month?

The price of residential electricity varies all over the place in CONUS; from almost 20 cents per kWh from ConEd to a nickle or so in some parts of the South and Pacific Northwest. Imagine if gasoline was $1 in some places and $4 in some other places, all in the USA.

There's also the issue of how big the place is, how many people live there and how they live. Things such as how much laundry they generate (kids who play certain sports tend to generate a lot of really dirty laundry), and whether they use a clothesline can make a big difference. Stuff like old inefficient appliances and leaving things on/doors open can be real money-wasters.

Older homes can be refitted to improve their efficiency, too. New double-insulate windows are not a big deal and can reduce maintenance cost. Insulation can be blown into the walls of a frame house from the inside or outside at low cost. Geothermal can be retrofitted too.

This all has a direct bearing on the subject, because too many folks (IMHO) set their house-choice criteria too narrowly.

At the same time, as the price-of-electricity variation shows, what is true in one place may not be true elsewhere. I know places where $300,000 will buy you a big house on a big lot in an excellent location, with all the modern stuff in excellent condition. And I know other places, maybe an hour or two away, where $300,000 will get you a tiny fixer-upper on a postage-stamp lot - if you're lucky.

ly
> place I ever lived where I could find frost on a closet wall on a
> cold day.

When I moved to western New York State in the late 1970s I lived for a time in a rented two-bedroom all-electric townhome of then-recent construction. $300 electric bills in the winter were normal, even though there were two party walls and the thermostat was kept low.

My first house, a wood-frame single just a few miles away in New York State, was built in 1900 and had gas heat with radiators, gas hot water and gas stove. $85/month for gas in the winter was a big bill.

The house on RadioTelegraph Hill was a stone-and-stucco twin built in 1923. It cost a little more to heat and cool than the New York State house.

Present location was built in 1950, original heater replaced in 2000 and the whole house heavily modified/upgraded in 2005.

There's an easy test for how well insulated/sealed your house is: When it's very cold or very hot outside, let the heat or A/C run long enough to get the house to a reasonable temperature.

Then turn off the heat or A/C and see how long it takes for the house to cool off or heat up a certain number of degrees. Use the thermostat indication for uniformity.

I've had a setback-thermostat since the new heater was installed, but since 2005 it doesn't do much because the house doesn't cool or heat more than a couple of degrees in several hours with the thermostat on the maximum "nobody home" setting.

We hams have lots of options, but as it was said in the first post of this thread, we have to plan from the beginning.

AFAIK, the reason for that is the classic rural-utilities problem: how to get a usable return on investment from a low-density customer base. Given a reasonable rate structure, often there simply aren't enough revenue dollars to justify the expense of installation and maintenance.

Note that the last parts of the USA to get electricity were the rural ones, and it took government programs like the REA and TVA to make it happen. (See windmill/farm radio story below).

Access-BPL isn't a way to get broadband to cover more than a mile or two; that's a job for fiber optics. Access-BPL is all about the "last mile": getting the broadband signal into the customer's neighborhood and premises without new wires by using the power lines. It sounds like a good idea until the downsides are considered. Besides the obvious interference issues, there's the need to install devices to permit the BPL signal to bypass the distribution transformers (which raises a whole bunch of safety concerns) and how lossy the power lines are to the BPL signal (because it's radiating!).

Economics alone may be the doom of BPL.

And now the farm radio story:

Years after electric lighting and radio broadcasting were common in the USA, many farms and rural areas did not have electricity. In some areas, small local cooperative power systems were built, with varying degrees of success. But in many areas the distances were so great that such systems did not happen.

One solution that had a fair following was the windmill generator. Windmills had long been used for pumping water - in fact the artesian well and the water-pumping windmill were major factors in the cultivation of the Great Plains. Companies like Wincharger produced wind-powered electric systems for lighting. Typically these were ~32 volt DC systems with storage batteries for windless nights.

The farm folks wanted radio, too, but usually the cost of an electric system just to power a receiver was prohibitive.

So AM BC radios were developed to run from the windmill power systems. They used ordinary receiving tubes with the heaters in series and the plate supply direct from the 32 volts, for economy. The resulting low gain was dealt with by an additional stage or two and paralleled audio output tubes. Still cheaper and less trouble than a dynamotor or vibrator supply, and used less energy. These wind-powered radios are rare now because they were only sold in rural areas and became obsolete when rural electrification came through. Plus one more factor:

One unusual feature of the 32 volt systems was that they used the same hardware (lamp sockets, outlets, switches, wiring) as 110 volt AC systems. This seemed like a good idea at the time because it eliminated future re-work. But it was risky because if someone plugged the wrong-voltage device in, there could be a lot of smoke released. More than a few 32 volt radios met an untimely demise from such mistakes.

Another approach stemmed from the development of low-drain 1.4 volt filament receiving tubes. "Farm radios" designed around these tubes and powered by dry cell batteries were developed for the rural market. Special combination-block dry cell batteries were developed where the cells were sized for a particular set design so that the A and B sections wore out together. They were a staple of rural-area radio-sales-and-repair shops until the electrification came through.

Now, 60-odd years later, we are seeing a resurgence in wind power and off-the-grid technology. Everything old is new again.

Only compression working in conjunction with spread spectrum or other frequency-skipping/efficiency techniques makes any sense what-so-ever ... if the implemented systems do not include state-of-the-art techniques in these areas--they will eventually be forced too, as traffic climbs ...

Although it has been months since I have viewed the available/proposed plans, the best plans called for the freqs to be open to all--i.e., rented/leased, etc. from successful bidder(s), and at fair rates. And, included free and open wifi access from points along major traffic routes, cities, etc. through constructive funding methods (ads, city/town/county/state/federal participations, etc.)

However, you know as well as I, in this day-and-age--especially, what the pubic wants and sees benefits in are NOT always given major priority.

Or simply, we live in a world which maximizes profits for some at the expense of the majority. While this does what it intends and very efficiently at that, the quality-of-living/services for the multitudes suffers greatly ... but then, you have already seen that. (example: my city just ear marked 1,500,000 for "the arts"--and, LARGE holes in the roads are tearing chunks off car tires! Our water system needs a

billion+ dollar upgrade ... etc.

If you don't believe our politicians, even down to the minor ones in your/my town, are "owned", just where in the heck have you been taking that "Rip Van Winkle Nap" at?

Sorry, in my haste I missed making a suitable response to this part of your post.

I never see a "failure", so to speak, occurring (other than catastrophic failure and requiring repair of hardware/firmware/software.) And, under peak-loads/hardware-failure/etc., slowdowns may occur. However, this would happen to any/all net traffic under adverse condition. Indeed, you really don't know how the net gets to you, satellite/hard-line/cell-tower/etc. are all being implemented behind the curtains and simply ends up looking seamless to us, the users.

The net should not be viewed as a long winded amateur who abuses "key down" time. The net is in packets, these packets are of a sensible size and sent "in turn." There are rules to prevent one or more "glutton(s)" from being able to adversely affect net traffic.

From my home wifi router/switch to the data streams off a major backbone, packets are handled this way. Usually some type of First-In-First-Out (or, FIFO) queue is implemented (packets may not always be transmitted "in order", however, they will always carry an id which allows the logical data stream to reconstructed.) Your packet is never "lost" or "ignored", it is simply "waiting in line", like a busy supermarket--your "shopping time" may vary.

IMHO:

I think this whole business of "overlays", unlicensed users, and such, is not the way to go. I think we (and more important, the FCC) need to step back and get some basic concepts re-established.

The whole basis of licensing and regulation is to get the most and best use of a limited resource (the RF spectrum) with minimum interference. That's what started licensing in 1912, and is the whole reason for the radio part of FCC.

And for a long time, if you wanted to intentionally radiate RF, you needed at least one FCC license, and had to abide by the rules of that license. If you unintentionally radiated enough RF, FCC would not let you continue doing so.

Different parts of the RF spectrum were allocated for different uses. Sharing of the same spectrum between licensed services worked with varying degrees of success.

The idea of allowing unlicensed intentional RF emitters to share RF spectrum with licensed ones probably dates back to the first "phono oscillators" that used the AM BC band to let you play records through a radio. That was a marginal idea in its time, but it's turned into a very bad idea today.

The big problem of BPL isn't that it could interfere with us hams - lots of things can do that. The big problem was that an unintentional (and effectively unlicensed) RF emitter was and is being given priority over and above licensed users. (See many reports of hams who report interference from BPL, yet the BPL system is allowed to continue operating).

The idea that various unlicensed users can "overlay" on top of licensed ones, and that the whole business of licensing and regulation can be relaxed, sounds pretty good at first. But in reality, problems do arise, and then the unlicensed users don't want to shut down. Often they are unaware of the interference.

It's just bad engineering and bad planning. If RF spectrum is needed for new technologies, allocate it! License the new technologies to use their own allocations, rather than stepping all over other folks'.

And stop permitting so much RF pollution from unintentional emitters. It's just not necessary; the technology exists to do things right.

Old-fashioned ideas? Maybe, but that doesn't mean they are bad ideas.

I am reminded of the old story of the hobo who was discovered by the train conductor, and who ordered the hobo off the train because he didn't have a ticket.

The hobo argued that the train was going to go where it was going anyway, that there was plenty of unused space in the baggage car and plenty of seats with no one in them, so why should he have to buy a ticket? The hobo promised that if the train got crowded he would get off. But barring such crowding, he argued, his presence on the train would cost the railroad nothing. So why throw him off? Why not let him ride free?

Somehow, somewhere, the concept of "the greater good" came into play. When coupled with the "regulation is bad" idea, it took on a new and dare I say evil life of its own. Normally the greater good is a buzzword for rwgulation fans. Here it was turned on it's head - since more people were/are unlicensed, their greater good could overwhelm the licensed users, who were part of the old, regulated paradigm.

> The idea that various unlicensed users can "overlay" on top of

It only sounds good to those who believe in ideology based physics.

> But in reality, problems

It is also very likely that they just don't care.

I think that steps on the toes of ideology though. Keep in mind that I think you are 100 percent correct.

Might it be that the new fashioned ideas are just plain wrong? There are some things that do not need regulation. If everyone were to get a very good education, most things would not need regulation. However, our society (in the US at least) tends toward specialization. Without a very liberal education (whoee, now that's PI!) people are dependent on other specialists to make policy for anything outside their own narrow specialty. This naturally tends toward regulation. I don't like it. I wish everyone was educated enough to make rational decisions on their own. Unless I misunderestimate people.

[TIC]

Makes a lot of sense Jim. After all, there are huge expanses of fallow
un-allocated spectrum out there, waiting to be exploited.

Or maybe not.

[/TIC]

Be careful what you wish for. If FCC agrees with you (every intentional
radiator should be licensed to their own allocation), then I predict that
spectrum currently allocated to hobbyists will be among the first to be
harvested and re-assigned.

(Whoops!)

Now you have me talking about my business but here I go anyway:

Every petition that we have submitted for our Public Safety clients
who need expansion into non-Public Safety Pool frequencies in T-Band
has been met with what I consider a boiler-plate query from the FCC
that has to be answered formally on the record about whether our
client has considered a 700 MHz system. What we say is this:

1. This is an expansion of existing system which already operates in
T-Band and there are no more Public Safety Pool T-Band channels
available that would not result in harmful interference to another
user of that band.

2. The characteristics of 700 MHz propagation and building
penetration are such that it would require anywhere from five to ten
times as many repeater sites as a T-band system, each one costing
three to five times as much as a T-Band site costs.

3. It is dangerous and unsafe to require a public safety officer
(police or fire) to carry two radios where the possibility exists that
the "wrong" radio would be used in a life-and-death situation.

4. There is no usable 700 MHz equipment on the market at the present
time. Existing 800 MHz equipment is not compatible with the operating
schemes proposed for the 700 MHz band.

5. The systems under consideration are taxpayer funded, and it is
egregious to abandon an existing system and procure a new system just
because the 700 MHz spectrum has been designated for future use. The
taxpayers won't stand for it, even in the name of "homeland security",
the magic words du jour, and obtaining additional sites is a
protracted and expensive procedure in today's environmental-conscious
urban and suburban environment (can you say NIMBY ?).

The documentation to support all the above literally runs into the
thousands of pages - all at the taxpayers' expense.

I'd say more but it would disparage a major manufacturer of equipment.

I do believe that the thrust of this group is to further Amateur
Radio, not "the 'net".

Then there are those of us who are professionals in spectrum
regulatory management who believe that this is a harebrained idea
from the get-go that violates good professional practice.

Phil:

Interesting point ... the not-too-distant-future (year? two? few years?) should either prove you right, or wrong ... "harebrained idea", huh, we'll see ... professional? Huh, I am one myself--does that mean "I am never wrong?" -- NO! (I find crystal balls are that way.) Professional means I must revise my facts constantly to keep up with new developments and be ready to revise "accepted notions" at any moment -- i.e., stand corrected! I am sure you are prepared to do the same -- being a "professional" and all ...

However, there are those who are like me, basically, we envision communication for what it is--freqs, protocols, purposes, reasons, traditional-justifications/historical-justifications, equipment, firmware, software, etc. be damned ... we/I see amateur radio simply interfacing to the net as seamlessly as the other forms of communications are/have done ... I frequently use magicjack/voip--I am certain this worries AT&T ... the possibilities with amateur radio are mind boggling -- and YET to be developed.

This means, your amateur broadcast may begin on your xmitter, transverse a cell tower, a hard phone-line, a trans-atlantic cable, satellite, etc. before it arrives at the fellow amateurs' shack--in Australia!--and the packets decoded to voice/video/data.

Regards,
JS

There's a fundamental problem with that viewpoint - see below.

> we/I see amateur
> radio simply
> interfacing to the net as seamlessly as the other forms of
> communications are/have done ...
> I frequently use magicjack/voip--I am
> certain this worries AT&T ... the possibilities with amateur

There's a difference between what can be done and what should be done.

> This means, your amateur broadcast may begin on your xmitter,
> transverse
> a cell tower, a hard phone-line, a trans-atlantic cable, satellite, etc.
> before it arrives at the fellow amateurs' shack--in Australia!--and
> the packets decoded to voice/video/data.

The problem is that such a mindset as you describe misses a
fundamental point about what amateur radio is all about. Indeed, it
misses a fundamental point about what *life* is all about.

What you describe is what could be described as "the mindset of the
destination" or "the mindset of the message". Meaning all that matters
is getting there, not the method or the journey. And for a lot of
things, that's perfectly OK; I don't really care what exact path or
technology routes my phone call or my email as long as it gets there
reliably and at low cost. Most people don't care if the TV show they
watch is delivered by magnetic tape, optical disc, RF in the air, RF
in a cable, or light in a fiber, it's the program content that matters
to them.

But there's another mindset to consider as well, which can be
described as "the mindset of the method" or "the mindset of the
journey". It's the mindset where the route, the technology, the
experience, etc., *do* make a difference to the person. In many cases
the journey is more important than the destination. And it's a big
part of what Amateur Radio is all about.

Because one of the main reason for Amateur Radio to exist is that it is "radio for its own sake". A thing done for its own intrinsic value to the doer, not just for the final result.

It's like asking why anyone goes fishing non-professionally when they can buy fish cheaper at the market. Or why anyone rides a bike, walks or runs when they have a perfectly good car, or cooks when they can go to a restaurant. Why anyone would paint or draw when there are perfectly good cameras of many types.

The answer is that they are doing those things for the doing, not just for the end result. A QSO from my radio to another ham's, direct by ionosphere, troposphere, aurora, etc., is not the same journey as a net-simulation, just as my homemade bread is not the same as a loaf bought in a store.

More than ten years ago, I saw discussions about how practically all that we radio amateurs do on HF from fixed points could be done on the net using various forms of simulation/emulation. And I'm sure it could be done.

The folks who proposed this simply didn't understand the difference between the journey and the destination.

That difference is very important.

There's another factor: Having an alternate system. Too much dependence on a single system is not always a good thing, because when (not if) that system fails there's no alternative - no backup. Too much dependence on a single system also stifles creativity because all thought tends to be conditioned to that system.

--

None of this means Amateur Radio must never ever connect to the 'net or to other communications systems. What it does mean is that such connections are an enhancement and/or interface, not a replacement for "A Boy And His Radio" (to use K0HB's phrase).

835. Emergency comms thought - good? not so good?

Newsgroup: rec.radio.amateur.moderated
Date: 2008-07-28 23:10:07 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <g6kkie$17m2$1@f04n12.cac.psu.edu>
Source record: 2506

While reading another thread about spectrum and emergency comms, a thought came to me. Lessee if it makes sense.

Given that:

1. Spectrum is a finite resourece

2. Emergency comms (this term is used generically) is always interested in trying to get more of that spectrum

3. One of the major shortcomings of present day systems is lack of communications between the different systems in an area.

The cell phone industry deals with access to limited spectrum all the time.

Is is then a possibility that emergency comms might shift to a system similar to cell phones? It seems to me that trunking is kind of an old fashioned idea, and is ripe for replacement.

Even in our area we have a 10 year old trunking system that is going to have to be replaced because it isn't working properly. One that was supposed to last for 20 years.

But a cellular type approach might just work well for them. Before anyone thinks I'm bonkers, I'm not talking about using cell phones, just the type of compression/time sharing.

Now interopability is not necessarily so difficult.

This is just first thought conjecture, possibly impossible, so feel free to rip into it.

We often get a mistaken notion, even among some Hams, that the whole point of Ham radio is for Hams to talk to each other. I've been taken to task time and again for saying that isn't the point, or at least it is only one of them.

If talking was the main point, I can pick up my cell phone and call around the world - to an absolutely huge base of people to talk to. Many more people to talk to than using Ham radio. Why use a radio at all?

A lot of Amateur radio is not about talking. It is about putting a system together, building antennas and other equipment. tinkering with software, having fun doing stuff. Learning things. For my self, I'm probably at about a 10 to 1 ratio of doing other Ham radio activities to

talking.

> What you describe is what could be described as "the mindset of the

One of the reasons that I stopped taking the interstates whenever
possible. I decided to let the majority white knuckle it out with the
trucks, the crazies going 100 mph, and the last mile dash to the
construction zone so that the driver is first in line to stop and wait.

While I take the old road at 5 miles over the speed limit, arrive stress
free, and surprisingly enough, at just about the same time as if I would
have taken the interstate.

It's the journey.

> Because one of the main reason for Amateur Radio to exist is that it
> is "radio for its own sake". A thing done for its own intrinsic value
> to the doer, not just for the final result.

And yet, the knowledge gained is most useful. SO many of the things
done by Amateur radio operators have a value in real life, even though
they seem like games, or reinventing the wheel.

As Riley Hollingsworth pointed out, contesters could give a lot of
pointers for emergency communicators. He made a comment about them
teaching NTS handlers lessons in rapid comms. Indeed to the point of
saying that by comparison, the contest would be over by the time the NTS
folks made the first couple exchanges. This is paraphrased.

Point is, learning how to put up a station, learning *how* the radios
work, learning how to listen to and work weak/noisy signals. Learning
how to make an accurate exchange of information. All those things are
fun, but a serious sort of fun.

Boy howdy they didn't get it. Some people get the end result mixed up
with the process.

It is similar to a discussion about unmanned/automatic contest stations.
While it is possible to do such a thing, who the heck would do it? At
least beyond a "look what I can do" level. Set the station up, and do
something else while it is contesting for you. I dunno, maybe another
hobby? Because that certainly wouldn't be interesting.

Those arguing for such things, and those up in arms about such things
coming to pass just don't get it.

> That difference is very important.
>
> ---

> thought tends to be conditioned to that system.

This has been proven time and time again, Jim. Systems that rely on a
lot of structure will go down, and usually go down hard. And the people
who work these systems have no idea on how to put them back together
again when they do. They have to get a team of manufacturer techs in at
great cost in time and money. By then the disaster is over.

Oddly enough, the "cure" seems to always be the addition of more
complexity and structure.

Whereas Amateur radio (or whatever else works in these situations) is
much closer to the raw physics, and is operated by people who know a lot
more than just "push the button and talk". They know how to get things
working and keep them working.

There are still some of us who cling to the motto "When all else
fails...amateur radio". My concept of ham radio is to be free from
any non-ham intermediary transmission systems.

Welcome to the proposed world of 700 MHz. See my earlier posting
about why 700 MHz won't work at the present time and may even not be
suitable in the future.

>Even in our area we have a 10 year old trunking system that is going to
>have to be replaced because it isn't working properly. One that was
>supposed to last for 20 years.

If it is an 800 MHz system, I can understand it. Planned obsolescence
appears to be designed into those systems by the Majority
Manufacturer. Our major clients, however, are using UHF and T-Band
trunking systems of the same vintage - by the same manufacturer in
most cases - and they are working just fine. The only changes that
have to be made are adding more channels because the growth of
population in the served area(s) putting more demand on services than
was forecast.

As far as "working properly" - that's the kind of things we fix.

Relevance to Ham Radio -- as the Public Safety systems expand, the
wise agency will increase the commitment to Ham Radio EmComm backup
as a partner, not as a competitor.

A bit of history may be in order.

Going back many decades, international radio spectrum managers (ITU/IFRB) designated several slices of spectrum for Industrial, Scientific, and Medical uses on a regulated-but-non-licensed basis. The most famous of these was the former 11-meter Amateur Radio band, centered around 27.12 MHz (Mc/s in those days) and the 960 MHz and the 2450 MHz bands where the "WiFi" stuff eventually landed.

These bands were and to most of us still are considered "electronic garbage cans" and Administrations could allocate uses of those spectrum slices on the basis that the users had to accept any interference from ISM operations.

The FCC decided to establish a class of non-licensed low-power operations regulated under what is now Part 15 which could operate in those spectrum spaces. The 11-meter band was allocated to the Citizens Band Radio Service, which at first was a licensed service but became "blanket authorization" when the renegade violators decided to ignore the law and the FCC caved in (if you can't beat 'em, join 'em). At the same time, ISM operations - which in general were high power with lots of harmonics) moved to screen rooms or elsewhere in the spectrum because their harmonics were causing interference in the VHF Aviation band. leaving that portion of the spectrum to the CBers.

This more-or-less orderly Part 15 operation lasted for a while until the FCC, in a stroke of lightheadedness, no doubt prodded by equipment manufacturers with product to sell, decided to allow Part 15 operations on other portions of the spectrum allocated to licensing users. There was quite an uproar while that was being proposed, and the objectors were told to "sit down and be quiet".

In other words, it was a done deal where politics or ideology overruled competent spectrum management.

As are all types of "services". Aircraft, Cell phone, Broadcast etc
all would love additional space.

> 3. One of the major shortcomings of present day systems is lack of
> communications between the different systems in an area.

This is an interoperability issue usually. It's not that the
technology isn't available to make it all play together, it's that
such infrastructure is expensive and the investment in the current
stuff is pretty big. The planning for integration of these systems is
not easy either. The biggest problem is getting every user to agree
to support a system that they don't "control" and be willing to buy
new equipment when what they have serves their needs just fine for
now.

> The cell phone industry deals with access to limited spectrum all the tim
e.

Using a standard set of protocols, significant planning costs, and
very expensive infrastructure behind each of those cell towers you see
(and many that you don't.) Just be aware that even the cell industry
has it's problems with interpretability, they usually push a lot of
complexity into the handset which in real terms starts to get pretty
expensive. You may not see the full costs because folks normally don't
pay full price for the handset. The cell companies pay most of the
costs, then make it up over time from the monthly fees.

They also spend a lot of time and money putting up antennas, running
around with receivers and doing survey work. Not to mention that they
donï¿½t cover 100% of everywhere.

> Is is then a possibility that emergency comms might shift to a system
> similar to cell phones? It seems to me that trunking is kind of an old
> fashioned idea, and is ripe for replacement.

Well, cell operations suffer from being heavily dependant on central
control points and a host of infrastructure that you may not notice.

They are quite complex and would be very subject to outages caused by long term power disruptions or flooding. All the things Katrina provided in vast amounts.

>
> But a cellular type approach might just work well for them. Before
> anyone thinks I'm bonkers, I'm not talking about using cell phones, just
> the type of compression/time sharing.

Trunking is a lot like the cell phones of old. But you may be right that a move to more spectrum friendly technology would be a good thing. The issue becomes getting everybody to play in the same field so interoperability is possible.

> Now interopability is not necessarily so difficult.

But it is, unless you plan for it. The solutions the cell phone industry was forced into are very expensive, complex and difficult to maintain compared to your standard analog repeater. Moving to digital transmission formats and frequency sharing would likely make this all the more difficult and costly and I don't see your local fire department or police force switching to some new system just because it integrates easily to other systems they might need to operate with for some hypothetical situation. For your smaller cities, the cost alone will pretty much preclude an upgrade.

I think Ham Radio offers quite the helping hand in situations where the ability to interoperate is needed. As an ad hoc emergency communications service ham radio shines. Where else can you get free radio equipment and trained operators to show up at the same time?

Well Doug, I noticed that on the FCC's 1999 R&O on DTV, they
said that they would have another ruling dealing with
Translators and LPTV "very shortly". Let's see, it's now
2008, and counting. :>)

My count is from a 2007 listing found on the FCC's
website.....but, the wildcard may be the number of VHF
analog stations who got their DTV allocation at UHF, but,
once the transition is complete, may want to move back to
VHF for it's better propagation
characteristics.....particularly the 7-13 channels.

The one thing that MOST folks seem to forget about EmComms is, that
"SOMETHING" caused the EmComm System to be activated, over the standard
regular variety PublicService Comms, and that same something that is
distrupting the regular stuff, is very likely, to take out some, if not
MOST, of the basic Comms infrastructure, in the effected area.

SO, Any EmComm System MUST as a RULE, be self-sufficent, self-powered, and mobile, or at least portable, into the effected area. This is the lesson of 9/11, and Katrina. When the towers went down 998% of the PublicService Comms Major Remote Bases were lost, one, beacuse they were on the Roofs of Towers, and two, because the Telco Infrastructure was in the Basements of the buildings and went off line when they collapsed. Basically the SAME thing happened in Katrina, the Telco infrastructure was Flooded, and offline from the middle of the storm, on, and the winds took out most of the Microwave Links, that backed up the Telco lines. Without such interconnections, operational, Trunked, Cellular, and the like, will NOT Function, PERIOD. What does function, is VHF & UHF Simplex, VHF & UHF Repeaters that are Self-Contained, Self Powered, including Antennas, that can be placed in Highsites, AFTER the majority of the destruction has already past. Cop Shops with their own Base Stations, powered by their own EmGensets, talking to cars and portables out in the field. EmComm Designed Portable Repeaters including Antennas, and PowerSupplies that can be Airlifted (Choopered) to HighSites in the effected area, once the destruction has slowed or stopped.
This is where HAMS can, and do SUPPLY EmComm Capability. They can Bring in the Mobiles and Portables that WILL WORK, without Telco Infrastructure, and can have at the ready Portable HighSite Repeaters that are EmComm Designed, and ready to function, once placed in the effected Area. Public Service/Govt can also have Mobile Command Centers, Mobile EmComm Centers, and Portable EmComm Repeaters that can be activated and placed in strategic pre-planned Sites for their areas of Service. In the EmComms Business, you can only depend on YOUR pre-planned stuff, and sometimes some of that hardware isn't going to function, so then you go to Plan B, which is you do with what IS working, untill you get something better, working. Sometimes that is HOURS away, sometimes that is DAYS away, and in the some cases it is weeks away, and is supplied by the National Guard, if the hardware, isn't already in IRAQ.

I'm not proposing a cellular system as used for telephones. What I am
looking at is a compression scheme similar to what is used for cellular.
The system would physically resemble a typical repeater system, with a

tower, perhaps several with a voting system to pick out the best signal,
which is relayed to the main tower, then compressed and sent out

Having a system such as I was thinking of would allow for a few towers
in a given area, all on high ground, with a lot of backup power.

On this, we agree. Generally speaking, most systems don't want to
budge, or there can be interagency infighting. One of the problems is
that while the different emergency teams operate with a high degree of
camaraderie within their team, outside groups are often viewed with
suspicion.

I remember as a Kid, my doctor had a "Dyeathermy?" Machine on
27.255 Mhz that had an 833 in it as a Self-excited Osc. I often
wondered if it took out all the CB Receivers in 20 miles when he fired
it up. Had to plugged into 220 Vac.

Oh.. And I'd like to add...

At very low cost (pretty much free for the asking).

The point is that Ham Radio can help "glue" the various systems
together and over come the cost and interoperability isues until such
time they can be worked out with new equipment. And by the time we
get to that point, there will be a whole new set of features that will
make the current crop of communications systems look down right
useless.

I can see it now.. With an SDR in everybodies hands, interoperability
will be a software load away. As it sits, SDR is way to expensive to
field for most applications, but that will be changing.

One of the true pleasures of (a) self employment and (b) a niche
market is I get some really odd service requests in the shop.

About a month ago a doctor calls about his diathermy machines.
4 new sweep tubes and a couple of oscillator doubler tubes and
we're back in business with 1600 Watts Peak pulse on 27 MHz.

It really did look like some Flash Gordon death ray machine.

What I found amusing was when I took it back to his office, his
method of testing it was to light it up with the antenna against
the small of his back, then hold up the light socket with the
coil of wire on it to his stomach and twiddle the knob for
maximum brightness.

Yehaw!

Always interesting! I wonder why the fearmongers picked cancer as the
fear agent for Cell phones and RF.

I do believe that cell phones have an effect upon humans. But not in the sensationalist way so often given. It isn't ionizing radion, so while it may have heating effects, or perhaps some other obscure effects, runaway cell growth isn't likely.

There is no question the user of the device will put themselves in the near field of a RF emitter that pouts out around a watt, up to 4 or so watts.

The far field, is not so big of a deal, but the near field is something else.

It is my own premise, based on some RF knowledge, some common sense, and personal experience, that overuse of a cell phone causes a person to become stupid. I have been nearly killed by cell phone using drivers enough times to know that something is going on. And I don't completely buy that they are simply distracted. My favorite example is when I was driving out a local road, in a semi rural area. A person in a big SUV comes racing behind me and nearly rear ends me (I was doing 45 in a 40 mph zone) He backs off, and then slows down to maybe 25 mph. I got about a half mile ahead of him. Then he accelerates again, and nearly rear ends me a second time. Then slows again. I then slowed foe a red light, and he gets in the lane to turn. He stops, and yup, there it is - the cell phone. Then he proceeds to drive through the red light. Lots of other cell phone stories, especially on our own failed road, Atherton Street. Suffice it to say, just as it isn't too hard to spot a drunk driver, you can easily id someone using a cell while driving.

I'm not sure if the effects are permanent, but given that I've seen people text messaging while driving, I can't help but wonder. Would anyone ever start out thinking that it might be a good idea to look at a tiny phone and punch keys while driving a 3000 pound machine? But I digress.

I am new here and as an amateur, I am interested in setting up an Igate and am looking for some assistance or advice. I am hoping that someone will take the time to walk me through the necessary steps. I have my packet radio working and can get position reports, however there seems to be some big holes. Maybe if we cover the basics here then we can get more folks to do this and fill in the holes.

Well APRS and packet in general has been kind of a dying part of the hobby for years. I'm not sure exactly why that is, perhaps the data rates are a bit slow and the technology is a bit out of date. I think APRS is nice, although a bit expensive to get going, as is D-Star which has data features too.

The problem really is that it takes enough operators in an area to reach "critical mass" where communications are fairly consistant and wide spread enough to be useful. Some major cities have enough repeaters but a lot of the rural areas will be very spotty coverage.

I think that packet just didn't quite make it to critical mass in a lot of areas before it started hitting the decline. Now with the newer modes comming online (and comerical data services) it 's going to be hard to get enough interest in Packet generated to get it up past critical mass on a national scale.

Doesn't mean it's not useful as it is, or that you cannot have a lot of fun playing with it though. I have an old 2M rig that I've intended to get a TNC for so I could play on packet too. Right now the $$ isn't in the checking acount and the spare time is nowhere to be seen.

Gary,

I suggest you get an old PC, put Linux on it, and become very familiar with the OS. Then, compile a custom kernel that includes the AX.25 features and leaves out what you don't need.

Keep it simple and small: you risk losing interest if you try too much at once.

While packet has been at rock bottom for a while, APRS is really quite busy, and growing. In Pennsylvania, we have a lot of stations on the air. So many stations in fact that it is usually a big help to filter some of them out.

For a demo, there are some web sites out there that take APRS info from the RF side, and map it out on a webpage. literally thousands of APRS signals.

Packet in the old sense, that of sending email and bulletins, has pretty much gone by the wayside, but fortunately APRS has arrived to keep things busy.

Gary, I can help you get something on the air. A few questions first.

Ar you right at the beginning, ie no rig, no gps, no software, or do you have something in mind? That will give us someplace to start.

I bought my 2 meter set up from Byonics (http://www.byonics.com/microtrak/)
and have it up and working for less than $200.

I have read that the only equipment required for an Igate was a receiver, a computer with a sound card and an internet connection. I have a scanner that covers 144.39 and a internet computer with a sound card. However I have not been able to get the software to function yet. This guy makes it sound easy (http://home.hiwaay.net/~sbuc/journal/igate.htm).

There must be some I gates around the area because there are Hams showing up on APRS.fi

I am still trying to understand TNC terminal node controllers and what they do. I have a lot to learn.

Your basic station requirements:

A 2 meter rig.

A TNC, either software or hardware

A GPS antenna/reciever - not needed if you are setting up a base
station, but pretty necessary if you are going mobile.

There are some freeware packages out there, like UIview but I went for
APRSview, a commercial product. It can include a copy of MapPoint.

My system is as follows:

Microsoft Streets and Trips running on a laptop in conjunction with
MapPoint and APRSpoint. They all mesh together.

I use the GPS receiver included in Streets and trips. I'm no fan of
Microsoft, but this is one of their best products, and the receiver is
very good. I get connected within seconds almost always. Faster than the
other units I've seen anyhow.

The APRSpoint software has a software TNC, so I don't have to use one of
those.

My radio is a Kenwood D-700, probably the best unit to use for APRS. It does have a built in TNC, but I don't use it for my setup. If you use UIview, or the built in APRS setup within the D-700, you'll want that built in TNC. plus the APRS antenna would have to be plugged directly into the D-700 for the alternative setup..

With this setup, I can send and track over a wide range area while mobile. This is another area where the D-700 shines. I highly recommend it or it's successor, the D-710. Not cheap radios, but if you are serious about APRS, they are the gold standard. You can use the radio for voice comms at the same time you are squawcking APRS. 50 watts output into an efficient 2 meter antenna, and I can hit a APRS repeater from most places in Pennsylvania.

- 73 de Mike N3LI -

Check... OLD Icom 2 Meter rig and suitable antenna for moble use.

> A TNC, either software or hardware

Um... You say software? What is out there? I know they have software
for the HF digital modes, but I didn't see anything for the VHF/UHF
stuff... I have the laptop to run it on, and I can run both Linux or
Windoz on it...

> A GPS antenna/reciever - not needed if you are setting up a base

I would assume that you would need some way to key the transmitter and
the proper cables between the radio and the computer (in my case it
will be a laptop).

I guess all I need is some software TNC. Wow, maybe the time will
show up soon.. A hardware TNC is hard to hide from the XYL, but
software is easy... :)

I know it's a bit dated, but an example of a software TNC
would be the Baycom modem that was used with the Commodore
C-64 computer. Simply a tone modem IC and the actual bit
shuffling was done by the computer.

Kind of like the WinModem for the PC that let the computer
do all the "what's this" stuff and made the modems totally
useless under anything other than the Windows OS.

> I guess all I need is some software TNC. Wow, maybe the time will

They make small TNCs, the Tigertronics Baypac comes to mind.

Amateur Radio Newsline(tm) Report 1616 - August 1, 2008

SOME WORDS OF THANKS

Ladies and gentlemen, with some more thank-you's to those who help keep these newscasts coming your way, here's Amateur Radio Newsline's Support Fund Administrator, Andy Jarema, N6TCQ

--

Last year in March we heard from the Ashland, Nebraska ARC and monthly contributors Joseph, KC8DKF, William, WA2IBM, and Scott in San Jose. Via PayPal there were Paul Meyers in Tempe, AZ and Scott Siegel, KB3JQQ in Baltimore.

In April we heard from The Raleigh, NC Amateur Radio Society and the South Orange Amateur Radio Association of Mission Viejo, CA.

In May we heard from Gordon Wai Sum Loui, KE6ETG in Honolulu. Via PayPal there were Robert Snyder, N2KGO in Sicklerville, NJ, Ray T. Mahorney on behalf of the Stoney Creek ARC, Rocky Mount NC and "Tweak a Whinger Day": find a ï¿½ "whinger" and push their buttons. I have only an inkling what that
means.

We at Newsline have always been volunteers, but the news doesn't come to us; we have to go get it. That costs money, and as you just heard, we didn't hear from many of you during that 3-month period. Please do your part to help keep these weekly newscasts stay on the air. Listen for how you can do that at the end of this broadcast.

Here's hoping I tweaked you,

I'm Andy Jarema, N6TCQ.

--

Andy will be back with us in the near future with more than-you's to those who have so generously contributed to the support fund.

Now, Amateur Radio Newsline report number 1616 with a release date of Friday, August 1st, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham Radio operators act as flooding hits New Mexico, Amateur radios response to the recent earthquake in China is highlighted in a U-S ham magazine, BPL becomes a nemesis for hams in Portugal, a C-B operator is fined $7000 for refusing to let the FCC inspect

his station and a well known ham station in Washington is forced to go Q-R-T. Find out the details on Amateur Radio Newsline(tm) report number 1616 coming your way right now.

RESCUE RADIO: HAMS ASSIST IN RIUDOSO NM FLOODING

Ham radio was among the first services to responded as rain and flooding hit the city of Riudoso, New Mexico on July 27th. Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

--

According to news reports about 300 people were evacuated from homes, campgrounds and a recreational vehicle park after flooding caused by the remnants of Hurricane Dolly. One person is confirmed dead after being swept away by the flooding. Four others were rescued after being trapped by rising water

The Rio Ruidoso went over its banks about midnight. According to Jay Miller, W5WHN, the Lincoln County ARES Group was activated a few hours later at 04:00 with hams sent to the Ruidoso Emergency Operations Center and to designated shelters. Tim Pettibone, K5OI, operated from the E-O-C much of the afternoon as Ric Sohl, K5RIC, coordinated the on-going ARES relief effort. Most of the emergency communications took place on the 146.98 Mhz K5RIC repeater because the local EMS relay systems were off line due to antenna problems.

Meteorologists said more than 6 inches of rain fell and flash flood watches were put in effect for central and eastern New Mexico. State officials estimated more than 60 homes were damaged or destroyed.

For the Amateur Radio Newsline, Im Don Carlson, KQ6FM, in Reno.

--

As this newscast is prepared, the members of the New Mexico ham radio community involved in emergency communications remain on alert. (W5WHN, K5CEC)

**

RESCUE RADIO: CHINA QUAKE HAM RADIO RESPONSE COVERED IN AUGUST CQ MAGAZINE

Its called "Hams Respond to China Disaster" and it is an in-depth look at the amateur radio response following a magnitude 8 point 0 earthquake that hit the nations Sichuan Provence last May 12th. Written by Bob Josuweit, WA3PZO, the six page article in CQ Magazine looks at the ham radio operations not only form the view of a reporter, but also from the point of view of radio amateurs who lived through the disaster and were among the first to respond.

One of the ham radio first responders was Liu Dan, BD8AM. At the very beginning of the article he describes not just his ham radio involvement but also the search for his wife and family. This, as a seemingly endless series of aftershocks continued.

Hams Resopond to China Disaster is must reading for any radio amateur who is in any way interested or involved in public service or emergency response operations. It begins on page 13 of the just out August issue of CQ Magazine, that's on newsstands right now. (ARNewsline(tm), CQ)

**

THE BPL SCENE: NEW INSTALLATION CAUSES PROBLEMS IN PORTUGAL

Broadband over Powerline Internet access is causing big problems for hams in Portugal This, according to Hugo Barata, CT2HMX, who says that the introduction of what Europe calls Powerline Communications or PLC technology is causing interference in most amateur service bands and to commercial broadcasting as well.

Ih his posting to QRZ.com, Barata says the the main culprit is a new three service system that provies video, data and telephone service using a broadband connection. He claims that consumers purchase the services and are unaware that it's the root cause of interference they are causing to others.

According to Barata, the worst offenders are PLC modems AV200 and AV300 from Corinex. He says that while the Corinex units have a notch filters for use in IARU Region 1, in most cases don't work properly. As a result, strong interference can heard inside of amateurs bands.

CT2HMX adds that Portuguese amateurs have filed complaints to that nations telecommunication regulator ANACOM. They are asking ANACOM to resolve this problem but nothing has happened yet. Barata says that so far, ANACOM has remained silent. (CT2HMX, QRZ.com)

**

THE BPL SCENE: UKQRM YAHOOGROUP FORMED TO FIGHT BPL

Radio Netherlands reports that a new Yahoo Group called UKQRM has been formed. This, as a meeting place for those who use the high frequency bands and who are suffering from interference caused by Broadband over Power Lines or BPL.

In announcing the group, Radio Netherlands Worldwide's Andy Sennitt is quoted as saying that the traditional DX clubs have been very slow to latch-on to the threat posed by this technology. Because of this it is encouraging to see that at least some listeners in the United Kingdom are trying to raise awareness of the problem.

Senitt says that behind the scenes, Radio Netherlands Worldwide has been involved in the effort to prevent the widespread use of this technology for several years. He says that one of his colleagues has been attending international conferences to raise objections on behalf of shortwave

broadcasters. Those interested in joining this group should go to groups.yahoo.com/group/UKQRM. (RN, UKQRM Group)

**

HAM RADIO IN SPACE: NEW P5-A MOVIE ON YOUTUBE

Amsat says that its Phase 5-A will be the first spacecraft built by radio amateurs to go to the Red planet and now there's a movie about it.

Titled "With AMSAT P5-A to Mars," the 10 minute video was produced by AMSAT Germany and covers almost every aspect of the AMSAT organization since its very beginning before taking us through the development cycle of P5-A. Here's a sample of the Phase 5 A story from the movie:

--

Actual audio from show.

--

Phase 5-A will not only be the first ham radio satellite to go to another world. It will also become the first ever private interplanetary spacecraft. Once on station in orbit around Mars, it will use frequencies in the Amateur Satellite Service at 2.4 and 10 GHz to communicate back home.

The story of its development and what it is expected to do during its mission is really what this video is all about. Its available on line at YouTube.com in several languages. You can watch and hear it in English at : http://www.youtube.com/watch?v=iIJ548EyUME

We will have more ham radio space related news later on. (AMSAT)

**

BREAK 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the N9QIP repeater serving Arlington, Wisconsin.

(5 sec pause here)

**

RADIO LAW: THE LEGALITY OF WIRELESS MICS

Wireless microphones used in the entertainment industry and houses of worship -- among other places -- could turn out to be the next big problem for the FCC. This after a coalition of consumer groups accuses those who use them of not having the required FCC license to do so. Bill Pasternak, WA6ITF, is in the newsroom with more:

--

The complaint was filed Wednesday, July 16th, by the Public Interest Spectrum Coalition. It charges that manufacturers of these microphones use deceptive advertising in the way they market them. Also, that they sell high end, wireless microphones to people who the coalition claims are not legally permitted to use them.

The legal filing alleges that after the nation's conversion to digital broadcasting in February 2009, some of the microphones will threaten emergency communications. Others have the potential to interfere with commercial wireless carriers who have collectively spent over $19 billion dollars to use the same airwaves as the microphones now do, and use them interference free.

The coalition says that it is unclear how many people and other entities actually own and use wireless microphones. FCC records show only 952 people or organizations possess such licenses, but analysts say there may be millions, most of whom do not understand that FCC rules require a license to use them.

The consumer group is recommending that the FCC immediately act to halt sales of wireless microphones that operate between TV channels 52 and 69. It also wants the FCC to require microphone manufacturers replace the older units. It also recommends that the government agree to a general amnesty for unauthorized microphone users. The Public Interest Spectrum Coalition also wants the FCC to create a new general wireless microphone service to operate in other spectrum.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the Newsroom in Los Angeles.

--

The big question is whether or not the FCC will act quickly on the Public Interest Spectrum Coalition's demand or if other priorities including the digital television conversion and introduction of new wireless services will mean that it will languish in limbo for years to come. (RW, Media Access Project, others)

**

PUBLIC SERVICE: NATIONAL NIGHT OUT -AUGUST 5

Hector Figueroa, KE6VRL, reminds us that Tuesday August 5th is the 2008 National Night Out. Its also a perfect night to demonstrate the utility of Amateur Radio to your local community.

National Night Out is an evening dedicated to bringing crime prevention and neighborhood spirit to the attention of everyone. It is also an evening to get out and meet your neighbors while letting criminals know that neighborhoods are organizing to help combat crime.

Ham radio by its very nature of mobility and instant communications is an excellent adjunct to any community watch program. As a result, a growing number of cities are now encouraging hams to be a part of ongoing safe neighborhoods programs.

More about this grass roots crime prevention program on line at www.nationaltownwatch.org (KE6VRL)

**

ENFORCEMENT: OREGON CB OPERATOR FINED $7000

An Oregon C-B operator has been fined $7000 by the FCC. This for refusing to permit an agent of the regulatory agency inspect hi station.

According to the FCC, in response to complaints it had received its agents from the Portland office this past February attempted to inspect the CB station owned by Jeremy William Barber in the city of Aloha, Oregon. They were unsuccessful when Barber denied them access.

On March 28th the FCC issued a Notice of Apparent Liability for Forfeiture in the amount of $7,000 to Barber. Despite evidence that Barber received the NAL, Barber never filed a response. Instead the FCC says that its Portland office continues to receive complaints concerning Barber's operation of his CB radio station.

Based on the information before it the FCC has now affirmed the $7000 fine and has given Barber the customary 30 days to pay it or to file an appeal. It has also directed its Portland office to attempt to conduct a follow-up inspection of Barber's CB radio station to determine whether his operation is compliant with the Commission's Rules regarding the Citizens Radio service. It also cautioned Barber that failure to allow this inspection will result in further sanctions. (FCC)

**

ENFORCEMENT: THAT TRANSMITTER IS UNAUTHORIZED

The Acting Interim District Director, of the FCC's Los Angeles District Office has issued an Official Citation to Wolfcom Enterprises of Hollywood. This for violation of the Commission's Rules by marketing unauthorized radio frequency devices in the United States.

The FCC says that an investigation by the Enforcement Bureau's Los Angeles Office revealed that this past June 11th Wolfcom Enterprises, at its Hollywood, California, store was found selling an unauthorized radio device known as the TB-1255CK. This is a 1.2 GHz wireless transmitter, which has not been certificated for sale or use in the United States.

The FCC letter released on July 17th tells Wolfcom that violations may subject the violator to substantial penalties. These could include monetary forfeitures, seizure of equipment through forfeiture action and criminal sanctions, including imprisonment.

Wolfcom Enterprises was told that it could request an interview at the closest FCC office if it wanted to discuss the matter face to face with the regulatory agency. The company was also offered the option of providing a written statement to specify what actions have been taken to correct the violations. (FCC)

**

ENFORCEMENT: FCC WARNS UNLICENSED FLORIDA BROADCASTER

The FCC's Miami Office has warned the owner of property where an unlicensed transmitter is located to take it off the air or face severe consequences. On its July 16th letter to R. Bryce Gray, Jr. the FCC says that it has received information that an unlicensed broadcast radio station on 101.9 MHz is allegedly operating from his property in the Oakland Park area.

The FCC says that back on March 4th, 14th And June 3rd that gents from the Miami office confirmed by direction finding techniques that radio signals on frequency 101.9 MHz were emanating from an antenna mounted on a pole at Gray's legal residence. The FCC has warned Gray that operation of radio transmitting equipment without a valid radio station authorization constitutes a violation of Federal laws and could subject the operator to severe penalties, including seizure of the offending radio equipment, and criminal sanctions including imprisonment.

Gray was ordered to cease operations immediately. He was also given 10 days from the date of the FCC notice to respond to the agency with any evidence that he has written authority to operate granted by the FCC. (FCC)

**

EDUCATION: FAR ANNOUNCES SCHOLARSHIP WINNERS

The Foundation for Amateur Radio has announced the 2008 winners of the 55 scholarships it administers for itself and various other ham radio organizations. The scholarships were open to all licensed radio amateurs who met the qualification and residence requirements of the various sponsors.

A complete list of winners is already on the ARRL website and should soon be posted to the Foundation for Amateur Radio website as well. The Foundation for Amateur Radio is a non-profit organization incorporated in the District of Columbia. (FAR)

**

WORLDBEAT - GERMANY: HILBERLING SUSPENDS PT-8000 PROGRAM

Production of the newly announced Hilberling PT-8000 high end H-F through VHF transceiver has been stopped. A notice on the company's website says that the project was abandoned due to ever changing requirements placed on the German designed transceiver by the European Union. This says Hilberling was making it nearly impossible to obtain an ongoing supply of the parts specified in the radios design.

The Hilberling PT-8000 was called the ultimate dream radio. Retailing in the $18,000 range it not only had almost impossible to duplicate specifications, and was to be available in several designer color schemes as well. It was to be offered in 10, 100 or 600 watt versions and was to be distributed in North America by Array Solutions.

More on the decision to suspend production of the Hilberling PT-8000 is on-line in German at hilberling .com. (DJ0QN, QRZ.com)

**

WORLDBEAT - UK: RADCOM NEEDS ARTICLES

The editors of the UK based Radio Communications Magazine are inviting readers to submit articles for publication. Constructional projects for HF and LF would be particularly welcome. If you are interesting in contributing an article or two please contact the Editor by e-mail to radcom@rsgb.org.uk (RSGB)

**

BREAK 2

This is ham radio news for today's radio amateur. From the down under in Auckland, New Zealand and from the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

EMERGING TECHNOLOGY: DRM TESTS TO TAKE PLACE IN ALASKA

Digital Radio Mondiale may be coming to America's last frontier. Jeff Reinhardt, AA6JR, has the details:

--

The Digital Radio Mondiale Consortium says that the Federal Communication Commission has granted a license to Digital Aurora Radio Technologies. This, for the company to conduct a 2 year experiment using D-R-M technology to determine the feasibility for coverage of the state of Alaska with Digital Radio Mondiale signals in three shortwave bands at 5, 7 and 9 MHz.

Because of the severe ionosphere propagation conditions at the high latitudes, the Digital Radio Mondiale Consortium says that these experiments in Alaska will yield valuable information on what is needed to get excellent audio coverage at realistic power levels for this concept to work.

Alaska has a surface area of approximately 1,300,000 square kilometers. The Consortium says that if the tests show excellent results for digital radio broadcasts to cover the entire state, the next step would be to obtain approval to use the system and the transmission station for a regular broadcasting service.

Proponents of the project say that with one D-R-M transmission of either 10 or 20 kHz in bandwidth, the entire state could possibly be covered. This, with nearly FM-like quality and up to 4 simultaneous

program streams. Currently no single broadcaster in Alaska is capable of providing this kind of service.

That's it for this weeks future technology page. For the Amateur Radio Newsline, I'm Jeff Reinhardt, AA6JR, in Los Angeles.

--

The full test plan by the The Digital Radio Mondiale Consortium includes several variations of D-R-M system in order to determine which combination works best under the different ionosphere propagation conditions that it expects to encounter. (Southgate, Media Network, DRM Consortium)

**

RADIO SCIENCE: MORE ON THE AURORA BOREALIS

Want to know more about the Aurora Borealis and what causes it? National Geographic magazine has an interesting story about a recent discovery in the triggering mechanisms for Aurora and a short video clip as well. The article makes interesting reading and you can find it on-line at http://news.nationalgeographic.com/news/2008/07/080724-auroras-lights.html (N1LF via VHF Reflector)

**

HAM RADIO IN SPACE: DO-64 TRANSPONDER ON THE AIR

The 435 to 145 MHz linear transponder onboard the Delfi D Oh 64 satellite has been activated. The transponder uplink is 435.570 to 435.530 MHz and the downlink is 145.880 to145.920 MHz. All frequencies are +/- Doppler shift that can be up to 3 kHz at 145 MHz and the transponder is inverting. This means Lower Sideband is translated to a Upper Sideband signal on the downlink.

Delfi D Oh 64 was built at the Delft University of Technology in the Netherlands. Since it was launched in Apri it has been collecting educational research data for use by the university students with the assistance of Radio Amateurs around the world.

More information on this satellite can be found at: Delfi-C3: http://www.delfic3.nl/ (ANS)

**

HAM RADIO IN SPACE: CP4 CONTROLERS NEED YOUR REPORTS

Jason Anderson, KI6GIV, at California Polytechnic State University is requesting amateur radio operators worldwide to assist with capturing the telemetry of the Cal Poly CP4 satellite.

According to Anderson there has been some unpredictable behavior on the CP4 satellite. He says that controllers only have contact with the bird once every 12 hours so would be extremely helpful if they could get some global support in collecting beacon transmissions. This, in order to get a more

complete picture of the satellite's health.

CP4 downlinks on 437.325Mz using FSK lower sideband modulation. The baud rate is 1200 with beaconing every minute. Audio or decoded binary data along with other reports go by e-mail to jander06 (at) calpoly (dot)edu (ANS)

**

WORLDBEAT - BANGLSDESH: SCOUT HAM RADIO OPS FROM JAMBOREE

Scouts in Bangladesh will establish two Amateur radio stations as a part of the 4th APR Air Internet Jamboree 2008. Bangladesh is the host country for this years Jamboree. The amateur stations using the call S-21-SHQ will be on-air from August 2nd to the 3rd operating in 40, 20 and 10 meter bands. The operators are mainly expected to make contact with scout stations in neighboring nations but also will look for DX in their leisure time. Special QSL will be available to those who contact S-21-SHQ but QSL routing is not available at this time. Organizers do say that electronics logs will be posted in EB7DX website. (Southgate)

**

WORLDBEAT - INDIA: INDIA LIGHTHOUSE IN ILLW

The first Indian lighthouse has registered for International Lighthouse and Lightship Weekend on 16th and 17th August. Permission has been received by hams in that nation to activate a lighthouse in southern India. A callsign is pending but it will be activated from the Indian Independence Day, 15th August, through to the 18th, which includes the International Lighthouse Weekend. (GB2RS)

**

DX

In D-X, word that OE5OHO, OE5HDN and OE3GEA will portable MJ from Jersey Island between August 21st to the 25th. Activity will be holiday style with operations on all High Frequency bands using CW and SSB. QSL via the Bureau to their respective home callsigns.

And keep an ear open for TS28ASJ. He will be active until August 3rd from the 28th Arab Scout Jamboree in Tunisia. Operations are expected to be on the High Frequency bands using CW, SSB, RRTY, PSK and SSTV. QSL via the Tunisian Bureau.

Lastly, IK2RZP, will be active portable VP9 from Bermuda August 5th to the24th. His operation will be mainly SSB and the digital modes on the 17 and 12 meter bands. QSL via his home callsign, direct or by the bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: THE END OF AN ERA AS SMITHSONIAN STATION GOES QRT

And finally this week, NN3SI, the amateur radio station at the Smithsonian Institution's National Museum of American History was forced to go QRT on July 31st. Amateur Radio Newsline's Mark Abramowicz, NT3V, talks with the man who holds the license to this historical ham radio call.

--

"It was originally located in the 1976 Bicentennial exhibit, 'A Nation of Nations.'

That's John Johnston, W3BE, trustee of NN3SI, who says that the amateur radio section of that exhibit was actually only expected to be around for a year.

"Now, when that was closed it was subsequently moved to a series of different exhibits which had a connection somehow with amateur radio,'' Johnston says. "Most recently, it was in an exhibit called 'Information Age.'

"But that was removed during a major renovation of the museum. So, our station closed along with that exhibit."

Johnston says NN3SI - a special call sign granted to the station by the FCC during a time when such licenses were rare - was staffed entirely by volunteers from the Washington D.C. area and Maryland and Virginia.

Johnston says there were recent negotiations to move the station to the new Air and Space Museum complex near Dulles Airport. But he says those talks ended without a resolution and the station now sits in limbo.

Johnston recalls spending many hours at NN3SI.

"We had operators from all over the world who'd come by," Johnston says. "The part I particularly enjoyed was in the spring when the school groups would come by and they would see our station.

"And we were one of the few exhibits that had live people in it. So we had an opportunity to talk with them directly and show them how amateur radio worked, and what it was all about, give them an introduction."

Johnston says he regularly scanned the station logs and was gratified to see during the over 32 years NN3SI was on the air, it served a unique role.

"The amazing part was the diversity of people from all over the United States, from all over the world," Johnston says. "They came and either visited the station or worked the station or sat down and did some operating."

He says NN3SI also had a prominent place on the Washington Mall.

"We were the closest station to the White House, we were the closest station to the FCC," Johnston says. "And, we were right on the mall in Washington D.C. It's some really prime real estate and it was a wonderful opportunity to show off ham radio."

Johnston remains optimistic that NN3SI will return - even though its equipment will be placed in storage for now by the Smithsonian.

"Well, I'm going to hang onto the license and I have every hope that we will establish an exhibit in one of the museums at some future date," Johston says.

We'll keep you posted.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.
--

QSL cards for previous two-way contacts made with NN3SI will remain available for some time. (ARNewsline(tm))

**

NEWSCAST CLOSE

Bill, I am wondering why linux as apposed to windows? Are you just trying to keep the system simple and inexpensive?

Could you explain a little more about the AX.25?

I downloaded the IU-view software and loaded it on to my desktop computer. I understood that with a radio that would receive 144.39 (in my case a scanner) that I could use the computer's sound card and IU-view to port packet signals on to the internet? I am not interested in transmitting from home at this point, just receiving signals and getting them to APRS.fi.

Gary

A modern software that works with windows is AGWPE created by SV2AGW.
You can download it here http://www.sv2agw.com/downloads/default.htm
This site tells you how to use it http://www.kc2rlm.info/soundcardpacket/

==> AMATEUR STATION AT SMITHSONIAN QRT AFTER 32 YEARS

After more than 30 years on the air from the nation's capital, NN3SI
<http://americanhistory.si.edu/events/programdetail.cfm?newskey=48>, the
Amateur Radio station at the National Museum of American History
<http://americanhistory.si.edu/index.cfm> -- part of the Smithsonian
Institution <http://www.si.edu/> -- became silent on Thursday, July 31.
Originally located in the Nations of Nations exhibit, the station first
went on-the-air in 1976 in celebration of the US Bicentennial. The FCC
caught the patriotic spirit, giving the station a temporary call sign --
NN3SI -- standing for Nation of Nations, Smithsonian Institution. The
Commission later made the call sign allocation permanent.
```

According to NN3SI volunteer Carl Lagoda, W3CL, a Special Event operation was planned for earlier this week, with certificates available to those who contacted NN3SI. DX Summit <http://www.dxsummit.fi/> spotted NN3SI on 75, 40 and 20 meters SSB.

NN3SI has been situated in several different exhibitions in the Museum; it was most recently housed in the former Information Age exhibit. This exhibit chronicled the birth and growth of the electronic information age -- from Samuel Morse's invention of a practical telegraph in the 1830s through the development of the telephone, radio, television and computer. The Museum has been closed since 2006 while undergoing a major renovation and is scheduled to reopen to the public this fall.

The station participated in many special events throughout its history. During the dedication of the World War II Memorial on the National Mall, station operators made many contacts and taught children visiting the Museum how to spell their names in Morse code. Over the years, operators at NN3SI -- who hailed from the District of Columbia, Maryland and Virginia (and the occasional guest operators from various parts of the globe) -- have logged contacts with amateurs in all parts of the world and with astronauts and cosmonauts in orbit. By operating the station, NN3SI ops promoted Amateur Radio as a national resource for emergency communications, trained operators, technicians and engineers -- as well as an outstanding hobby -- to the more than 4 million people who visit the Museum each year.

QSL via NN3SI, Smithsonian Institution, National Museum of American History, 17701 Bowie Mill Rd, Derwood, MD 20855.

==> GERMAN RADIO MANUFACTURER HALTS TRANSCEIVER PRODUCTION

In a surprise move, Hilberling GmbH <http://www.hilberling.com/> has stopped production on the much anticipated PT-8000 series of HF/VHF Amateur Radio transceivers. Apparently due to CE marking regulations <http://en.wikipedia.org/wiki/CE_mark>, Hilberling had to make constant adjustments to the design of the radio and was unable to repeat the performance of prototypes in production models and was not able to justify the expense involved with further redesign work. The CE mark certifies that a product has met European Union health, safety and environmental requirements, ensuring consumer safety. Array Solutions <http://www.arraysolutions.com> -- which had been set to be the North American distributor for the transceiver series -- featured the PT-8000 at its booths at the 2008 Dayton Hamvention.

Hans Hilberling, DK7LG, explained in German on the company's Web site why the company canceled production of the PT-8000 series:

"Production of the PT-8000 equipment series has been halted. Due to the persistent challenges we've had to overcome in the process of bringing the official EU-wide manufacturer's model to fruition, it became necessary to make more and more adaptations in the design of this cutting-edge transceiver. The lofty design goals of the PT-8000 could be attained in some prototypes. We encountered difficulties that we could

not overcome at justifiable expense in guaranteeing, without reservation, a high standard of mass production involving many suppliers. We appreciate the great interest this project has attracted over its entire course." -- Translation by Rick Lindquist, WW3DE

The PT-8000 was featured in a 4-page pull-out advertisement in the May 2007 issue of QST. The ad stated that Hilberling had not yet received approval by the FCC to market the radio in the US. All digital devices -- including Amateur Radio equipment -- must be approved by the FCC, meeting the requirements of FCC Part 15 and RSS 210 (Radio Standards Specifications, Industry Canada) to ensure its compliance as an unintentional radiator and as a generic receiver. Approval was granted in May 2008. Testing was done in April and May 2008 by Professional Testing (EMI) of Round Rock, Texas.

According to the QST ad, the PT-8000 was set to feature:
* An automatically tuned preselector
* Precision matched first and second mixers, designed by Synergy Microwave, with third intercept points at 40+ dBm
* Three roofing filters at 2.7, 6 and 12 kHz
* Six hybrid amplifiers from LF to VHF with third intercept points at 50+ dBm
* Seven 16-pole ladder filters working in combination with DSP filters in the 10.7 MHz second IFs of each filter
* 13.8 V HF MOSFETs (metal-oxide-semiconductor field-effect transistor) in the 100 W power amplifier; high efficiency (70 percent) SD3933 HF MOSFETs in the 600 W final amplifier
* Three additional 70.7 MHz roofing filters in the transmitter stages for clean output
* Designed with UHF and microwave transverters in mind, 1 Hz frequency resolution with the ability to connect transverters to both receivers simultaneously
* Taps at the first and second IFs for analysis, monitoring and experimentation
* Easily updatable firmware

The price for a 10 W PT-8000 started at $12,000, going up to $16,000 for the 600 W model. Commercial and military grades were priced at an additional $10,000.

==> HF DIGITAL VOICE PROGRAMS ONCE AGAIN AVAILABLE FOR DOWNLOAD

Citing codec (coding/decoding) licensing issues, three free Windows programs for sound card-based HF digital voice were yanked from their download site for a short time recently, surprising hams who are interested in HF digital voice operation; several online groups that supported the software were also closed for a short time.

WinDRM, DRMDV and FDMDV, all written by Cesco Lanza, HB9TLK, used a codec that was developed for the US Department of Defense and NATO. Rights to various forms of the codec are held by several companies. According to Gary Pearce, KN4AQ, the companies have "winked" at ham

radio use for several years, but a recent complaint caused the programs to be pulled from the download site. "Lanza did a quick rewrite to use an open-source codec, and now WinDRM and FDMDV are back," Pearce said. "DRMDV, an intermediate program between the other two, has been abandoned. WinDRM could always use the open-source Speex codec, but FDMDV users will need to download the new version."

Pearce said these three programs all allow hams to transmit and receive digital voice by connecting their PC sound card to an ordinary SSB transceiver: "The result has been surprisingly high quality audio, with virtually no noise -- sort of like listening to FM, but in the narrow bandwidth of a sideband signal. WinDRM, the best sounding program, uses 2.5 kHz of spectrum. FDMDV sounds a little rougher, but uses only 1.1 kHz of spectrum. They both use OFDM modulation, a set of close-spaced carriers that are each modulated with a little bit of data to add up to the final digital signal. The main problem with HF digital voice is that it needs fairly strong signals. FDMDV works better with weaker signals than WinDRM."

Pearce said that none of the available open-source codecs work as well as the old one: "MELP <http://en.wikipedia.org/wiki/MELP>, or Mixed Excitation Linear Prediction, was designed specifically for high-quality, low data-rate voice communication. So the on-air audio might suffer some with the new version. Digital voice users have been waiting and hoping for someone to concentrate on developing a codec optimized for ham radio use, but none has been forthcoming."

FDMDV and WinDRM can both be downloaded from Jason Buchanan's, N1SU, Web site <http://www.n1su.com/>.

The AOR digital voice modems and D-STAR radios both use the AMBE 2020 vocoder, and are not affected by the coding changes; the AMBE 2020 vocoder is a proprietary chip that is embedded in each unit.

For more information on WinDRM, check out QST Editor Steve Ford's, WB8IMY, article ["Life Could Be a DReaM," pages 38-40] in the April 2007 issue of QST.

==> DUTCH AMATEUR RADIO SATELLITE NOW LIVE

The linear transponder aboard the new Dutch OSCAR 64 satellite <http://www.arrl.org/news/stories/2008/05/22/10117/?nc=1> (otherwise known as Delfi-C3 <http://www.delfic3.nl/>) is now open for CW and SSB operation.

The spacecraft boots into transponder mode whenever it is in full sunlight. Ground controllers will briefly switch the satellite to either "basic" or "science" configuration once every two weeks; otherwise, the linear transponder will be the default mode. The transponder uplink passband is from 435.530-435.570 MHz with a downlink passband from 145.880-145.930 MHz. The transponder CW beacon can be heard at 145.870 MHz.

Delfi C-3 was successfully launched April 28, 2008 from India aboard a Polar launch vehicle <http://www.arrl.org/news/stories/2008/04/28/10067/?nc=1> and was successfully commissioned, currently transmitting telemetry on the 2 meter amateur band. In addition to its 2 meter downlink, Delfi C-3 has an uplink on the 70 cm band.

The satellite was developed by a team of some 60 students and facility members from various polytechnic schools in The Netherlands. Delfi C-3 carries two experiments -- one involving thin film solar cells developed by Dutch Space, and an autonomous wireless Sun sensor from the Dutch Government Research Institute (TNO). E-mail reports are welcome <info@delfic3.nl>.

==> MARS LENDS A HAND WITH HURRICANE DOLLY OPERATIONS

When Tropical Storm Dolly turned into Hurricane Dolly <http://www.arrl.org/news/stories/2008/07/22/10221/?nc=1>, various Amateur Radio Emergency Communications groups, such as WX4NHC at the National Hurricane Center, the Hurricane Watch Net (HWN) and the VoIP WX Net (VOIPWX), began tracking the storm. One other group -- the Army's Military Amateur Radio Service (MARS) -- also helped out with storm communications.

According to Texas State MARS Director Dave Martin, MARS leadership began to track the storm while it was still in the Atlantic. MARS established a liaison with the Texas Military Forces (TXMF) and the Texas State Operations Center (SOC). An Alert Notification message was sent to all MARS members on July 18, informing Texas Army MARS that the SOC was at full operations and would announce when they would request full mobilization of all agencies. This decision was made just two days later and an additional Alert Notification was sent to the membership to begin emergency net operations on July 22 at 8 AM.

"Our mission was to support the TXMF and the SOC with HF communications by expanding the normal net schedule and establishing a full-time liaison," Martin said. "In addition, requests were sent to the other MARS services in the region asking for liaison stations to participate in the Army nets. Fortunately, a hurricane exercise had been completed a week before and the exercise operations order was used to execute this mission. We reacted to the storm the same way we trained for the emergency."

Beginning on July 22, Texas MARS opened E-nets at 8 AM, 1 PM, 7 PM and 10 PM, with a 6 AM net opening the next day. While the Net Control Stations were in Texas, support was received from Oklahoma and Louisiana Army MARS. TXMF was notified that Texas Army MARS had received permission from Army MARS Headquarters to deploy HF communications teams with their deploying elements as was done during a previous exercise. During the emergency, the nets had an average of 25-30 check-ins; all traffic was sent via MT63 or Winlink 2000.

Martin said that all MARS stations in the affected area were off the air during the height of the storm. MARS member Tom Whiteside, N5TN/AAR6CQ, was able to facilitate the use of the Winlink network, exchanging traffic with the Harlingen Emergency Operations Center; Harlingen is about 27 miles north of the Mexican border, in Texas's southern tip. This area was one of the hardest hit areas in the state.

As Hurricane Dolly approached Harlingen, Sergeant Gerald Manthey, KC6CNN, Harlingen's Director of Emergency Communications, was on duty at the EOC. Manthey has been the driving force in the Rio Grande Valley for Winlink, as well as pushing amateur voice capabilities in the area with surrounding agencies. Harlingen became the South Texas ARES' fifth EMCOMM PMBO in December of 2007 with both local VHF Packet and HF PACTOR capability.

Due to a localized power failure, the EOC was soon running on generator power. During the storm, Manthey kept in touch with both the SOC and the Emergency Operations Center in San Antonio. He also kept in touch with other hams in the valley via both voice and Winlink.

"Winlink is the perfect tool for this sort of thing," said Manthey. "You can send messages and get them when you have time. The system works very well even without the Internet."

Manthey communicated with the City of Brownsville EOC, the Cameron County EOC, the Valley Baptist Medical Center and individual amateurs via Winlink throughout the storm. One of those hams was ARRL West Gulf Division Vice Director David Woolweaver, K5RAV, who operates a Winlink RMS Packet station in Harlingen. The AE5R station was the first test of the new RMS Relay program that provides for local message hubbing during an Internet outage.

MARS emergency operations continued until 10 PM on July 24 when Kevin Lemon, the State RACES officer, stood down the Amateur Radio operation. Army MARS also ceased operations at the SOC, but remained on call in case of a flooding event. "Hurricane Dolly was a serious but not major storm," Martin said. "Even at that, there were times when communications were out due to winds or flooding. Volunteers in MARS and the Amateur Radio community provided what was needed to get through the storm and are standing by for any after effects." -- Thanks to Texas State Army MARS Director Dave Martin, K5YFO/AAA6TX, and Tom Whiteside, N5TW/AAR6CQ, for the information

==> ARRL MEMBERSHIP NEWSLETTERS, BULLETINS AND NOTIFICATIONS

Did you know the ARRL offers more newsletters than The ARRL Letter? One of the many ARRL membership benefits includes other newsletters, such as the ARRL Contest Update (a bi-weekly contest newsletter), the ARES E-Letter (sent monthly, containing public service and emergency communications news), the ARRL Club News and the ARRL Instructor/Teacher E-Letter.

You can also elect to receive news and information from your Division Director and Section Manager (keep in mind that not all

Divisions/Sections send notices), as well as W1AW bulletins that relate to DX, propagation, satellites and Keplerian reports. The ARRL also offers a free notification service to members, letting them know when their membership and license are due to expire.

Sign up for these newsletters, bulletins and notifications on the Member Data page of the ARRL Web site <http://www.arrl.org/members-only/memdata.html>.

==>SOLAR UPDATE

Tad "Lost in a shaft of sunlight" Cook, K7RA, this week reports: July ended with no sunspots at all -- save for three days, July 18-20, when one weak sunspot group appeared and faded from view. Sunspot numbers for those days were 11, 12 and 11. Sunspot numbers for July 24-30 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.4, 65.8, 66.1, 66.3, 66.3, 66 and 66.5 with a mean of 66.1. Estimated planetary A indices were 11, 3, 5, 7, 7, 3 and 5 with a mean of 5.9. Estimated mid-latitude A indices were 7, 2, 4, 4, 6, 2 and 4 with a mean of 4.1. The outlook from the US Air Force Space Weather operations for many weeks now has shown a predicted solar flux of 66; their prediction from July 31 shows the same for the next 45 days. This tells me that there isn't any period where we might expect more sunspot activity, or at least no way to foresee it. They predict the next geomagnetic activity of any note for August 10, with a planetary A index of 20. They predict a planetary A index of 8 for August 1, then 5 for August 2-6 then 8 again on August 7. Geophysical Institute Prague echoes that prediction with quiet to unsettled conditions for August 1 and 7, and quiet conditions August 2-6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by "The Dry Salvages," one of the poems by T. S. Eliot known as The Four Quartets.

==>IN BRIEF:

* This Weekend on the Radio: This weekend, look for the the ARRL UHF Contest August 2-3. The TARA Grid Dip Shindig and the European HF Championship are on August 2. On August 2-3, look for the 10-10 International Summer Contest (SSB), the National Lighthouse Weekend QSO Contest and the North American QSO Party (CW). The RSGB RoPoCo 2 and the SARL HF Phone Contest are both August 3. Next weekend, the WAE DX Contest (CW) and the Maryland-DC QSO Party are August 9-10. The SKCC Weekend Sprintathon is August 10 and the NAQCC Straight Key/Bug Sprint is August 13. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more

info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 24, 2008 for these online course sessions beginning on Friday, September 5, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Steve Telenius-Lowe, 9M6DXX/G4JVG, Wins June QST Cover Plaque Award: The winner of the QST Cover Plaque Award for June is Steve Telenius-Lowe, 9M6DXX/G4JVG, for his article "The FSDXA 3B7C St Brandon DXpedition." Congratulations, Steve! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>.

* W1AW/KL7 Now QRV: Special event station W1AW/KL7 will be on the air from grid square BP56 July 26-August 10 on all bands from 160-6 meters. This ARRL 2008 Alaska State Convention Special Event Station <http://www.akhamfest.com/arcticcirclespecial.php> plans to run two HF stations operating CW, SSB and digital, one satellite station and one station devoted to 146.52 MHz. The Convention itself runs from August 1-4 in Anchorage.

* Notes from the DXCC Desk: Manager Bill Moore, NC1L, reports that the 5X4X operations in Uganda -- from 2007 to present -- have been approved for DXCC credit. "If you had cards rejected for this operation, please send an e-mail to the ARRL DXCC Desk <dxcc@arrl.org> to have your DXCC record updated," Moore said.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Gary,

AX.25 is the protocol that was used for packet transmission on ham radio when I was using packet: I assume it's still the standard, since Linux still has the option. It might help you to think of it as TCP/IP with ham calls signs added.

If the Windows-based software is free, reliable, and meets your needs, and you already have a Windows-based PC you're willing to dedicate to an Igate, then you can certainly use that. However, I find Linux to be an excellent substitute for Windows, especially for "single function" machines such as a BBS or packet gateway. Linux is also able to run on much older hardware than Windows, and (most importantly) offers native support for the AX.25 protocol stack, allowing full use of higher-level applications without modification: to Linux, AX.25 and TCP/IP are just two different MAC layers.

Not to mention that Linux is free-as-in-speech, and the license says so.

73, Bill W1AC

Yes, it is. It's showing its age but is still in use.

> It might help you to think of it as TCP/IP with
>ham calls signs added.

I think it's more proper to think of it as a lower-level protocol...
more like Ethernet, with callsigns taking the place of Ethernet MAC
addresses.

AX.25 can transmit its own style of datagrams, or data streams
(analogous to UDP and TCP respectively), and it can also carry IP
packets (and thus TCP and UDP).

>support for the AX.25 protocol stack, allowing full use of higher-level
>applications without modification: to Linux, AX.25 and TCP/IP are just
>two different MAC layers.

Yup. 'Tis a definite advantage.

Once you've cut your teeth on handling a single AX.25 hookup on a
Linux system, you can (if desired) expand to running a whole stack of
AX.25 ports on the same system, with the same applications... doing
AX.25 routing, running a BBS, and so forth.

There are at least four ways to run ham packet on Linux:

- A full-powered TNC (like a PackRatt or a TAPR or MFJ TNC-2 or clone),
connected via a serial port - just like Windows. In this
arrangement, the TNC itself handles the full AX.25 protocol, and
you talk to it (via Linux) using a terminal emulator.

- With a TNC (full-featured or limited function) in "KISS" mode.
In this mode, the TNC handles the over-the-air transmission and

reception of packets, the Linux kernel handles all of the higher-
level AX.25 protocol support, and Linux applications provide the
connection management, BBS capability, etc.

- With a sound-card interface and a "soft modem" application. There's
no separate TNC - Linux uses the CPU (as a DSP, in effect) and sound
card to implement a modem, which then registers itself with the Linux
kernel as a "KISS" TNC... everything above this point is just like
the previous approach.

- Linux kernel AX.25, encapsulated into Ethernet (and then into
IP if you want). Good for connecting together multiple packet
nodes into a network via the Internet.

You can run two or more of these approaches on the same Linux system
at the same time, if you wish.

>Not to mention that Linux is free-as-in-speech, and the license says so.

And also very close to free-as-in-beer, if you're already paying for a
broadband connection through which you can download it. With Linux
you can also see the source code to the full software stack (which can
be very good at times, and can also cause you the screaming horrors
occasionally) and make changes if you wish.

In fairness, Windows also supports at least three of these modes (full
TNC, KISS TNC, and sound-card "softmodem TNC"). I don't know about
Ethernet/IP encapsulation of AX.25.

Source record: 2537

Hi,

I'm thinking about buying a handheld to take along on my offroad motorcycle travels. I will be between Wendover, NV and Delta, UT. It is about 120 miles of very barren territory, sand dunes, salt flats and rocky mountains. My wife is concerned - and probably rightfully so - that mechanical failure or a crash will leave me in the middle of nowhere. I plan on following a known route (GPS), so if I go missing too long folks will know where to look for me.

I have 20 years of desert riding experience, but never in an area I couldn't walk out of (perhaps 7 miles to nearest road). So I'm thinking she has a good point. Attempting to walk that far with limited water might lead to a tragic situation.

I am a electrical engineer and have ordered a book off amazon, and either way plan on taking the FCC test. Would a 5 watt handheld have a chance of getting out a signal in this area? It is fairly close to an Air Force proving grounds, so perhaps? My enduro motorcycle does have 12 VDC and I could mount a smaller unit with an external antenna but wonder if it is worth it? On this trip I would use it only for life-threatening conditions, so perhaps a handheld can use law enforcement repeaters???

Any thoughts on the subject from those with experience would be greatly appreciated.

Thanks, Eric

If you want RELIABLE communications from "very barren territory", forget
amateur radio.

Get a satelite phone.

A "Personal Locator Beacon" would seem to fit the "Emergency Panic
Button" requirement for your trip. If you are looking for "Direct Comms",
the Ham Radio, MAY, be able to do the job, depending on the location
and elevation of the local Repeaters in the area of you transit. You
can expect 20 miles from a VHF 5 Watt Radio, which gets you to a bit
farther than the horizon, and if there is a HighSite Local Repeater,
then 75 miles would be about the limit. You will need to research,
what coverage is in the area, and don't forget HighSite Cellphone
coverage, as there maybe some of that out in that area as well.
For 100% Voice Comms, SAT based service is the only for sure option.

>From a mile-high site near Mt. Rainier, WA, I got into a Vancouver, BC repeater with my 2-watt HT -- a distance of 150 miles. The VE7 I talked with was on a bicycle in Vancouver.... We talked for at least several minutes.

As for being able to use a [modified] 2-way amateur radio to access law enforcement repeaters... absolutely not. There was a big flap about that several years ago where someone did just that -- life-threatening and all. I don't know what the eventual outcome was, but the reported intermediary events were not pretty.

Eric;

Have fun on your trip. For emergency communications the other responders have all provided good information.

My addition to this thread is to suggest you also pack a FRS radio. Tune to channel one tone off for emergency communications. If it is necessary to call in airborne search and rescue assets the Civil Air Patrol most likely will be one of the agencies. One of the tools we use is the FRS radio tuned to channel 1 for communications with lost individuals and parties. Make sure that your trip plan specifically mentions FRS channel one.

You can rent sat phones and personal locater beacons for your trip. The cost is cheap insurance. Then use the FRS for close in communications.

Thank you all for the helpful advice. I cured my wife's worryies by inviting her along. Now she's excited to go. I thought the area would be just rabbit trails through open desert. Turns out the largest part of my journey will take place on the historic "Pony Express" trail. I didn't realize the Pony Express went through this area of Utah! Essentially it is a 135 mile long dirt road, with perhaps 1 or 2 ranching trucks passing through per day. Hopefully we'll see the wild horses that are claimed to live out there.

I did find a very well done video describing the history of the area and monuments:
http://www.youtube.com/watch?v=DwOZTezO6mM&feature=related

Here's a simple HTML page with a few pictures from the BLM:
http://www.blm.gov/ut/st/en/fo/salt_lake/recreation/back_country_byways/pony_express_trail/pony_express_trail.html

Thanks again, Eric.

Plus the APRSPoint software has a software TNC. If software TNC is all that is desired, it is overkill, but for a complete setup, maps, dots, and internet or RF station placement, it is pretty good.

Around 50 dollars for the program by itself, around 70 for the Programs plus MapPoint.

Only problem I had was when I changed my call sign, it wouldn't work for me. An email to their support fixed that in a couple hours. Service is good.

note: I am not affiliated with APRSPoint in any way, and the above is just the musings of a happy customer, and not an invitation to buy or sell the product.

Just a note here, Mt Rainier to Vancouver BC is a KNOW Inversion Path
that has been worked for many years.

If you want to avoid a lengthy legal hassle with the law enforcement
agencies and the FCC arrayed against you, forget about using a
hand-held radio on law enforcement frequencies ANYWHERE unless you
have (1) advance agreement from them and (2) use a radio that is type
certified for such use. Amateur hand-helds are not.

Just noted a new thread over on eham.net about how SWBC is supposed to vacate 7100-7200 kc. Which will make 40 meters much more usable for 'phone, particularly at night. It will also hopefully take some pressure off 7000-7100, because non-US Region 2 hams on 'phone won't need to go below 7100 to get away from SWBC QRM.

The thing that got me was that the change goes into effect March 29, 2009 - less than 8 months from now! I remember reading about it back in 2003 and thinking "that's years away...."

Amateur Radio Newsline(tm) Report 1617 - August 8, 2008

Amateur Radio Newsline report number 1617 with a release date of Friday, August 8th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Jamming hits repeaters in the UK and system owners are urged to act. Also, two ham radio satellites are lost in a launch mishap, Australia says it will develop a new emergency communications tracking system, a popular United States based ham radio website says no more discussions of politics and a trip back through time to old radio in the South Pacific. Come and enjoy the voyage with us on Amateur Radio Newsline(tm) report number 1617 coming your way right now.

(Billboard Cart Here)

**

ENFORCEMENT NEEDED: REPEATER JAMMING WAVE HITS THE UK

It's a story all to common in the United States but this time its coming from overseas. A wave of jamming and other abuses has hit repeaters in the United Kingdom and repeater owners are being urged to act against the offenders. Jeramy Boot, G4NJH. is in Nottingham with the story:

--

There has unfortunately been a recent upsurge in repeater abuse in a number of areas of the UK with the London area being particularly badly affected. Repeater Keepers have advised to take positive action and this has resulted in the recent temporary closure of GB3EL.

In other areas, a number of Keepers have taken the initiative and imposed closedown 'cooling off' periods and `curfews' on their repeaters at times when abuse has been observed to be at its worst.

It must be recognized that similar actions may be imposed by the Regulator if Keepers are not prepared to take the lead themselves.

The RSGB are in ongoing discussions with Ofcom on how offenders can be identified and dealt with. They are determined that perpetrators will be brought to book and not be allowed to continue their mindless behavior on air.

I'm Jeremy Boot, G4NJH, and you are listening to the amateur Radio Newsline.

--

The United Kingdom's telecommunications regulator Ofcom and its predecessors have a long history of dealing very sternly with regulatory violators in any radio service. In years past we have reported on cases where telecommunications officials in the U-K have taken alleged violators into court where, if found guilty, they were fined and even sent to prison. Though the latter is fairly rare, if generally believed that if Ofcom gets involved, it's a sure bet that those causing the problem will be
quickly taken off the air.

And less we forget, a repeater keeper in the U-K is the equivalent of a repeater owner operator here in the USA. (GB2RS)

**

HAM RADIO IN SPACE: TWO HAM RADIO CUBESATS LOST AT LAUNCH

Two Amateur radio cubesats were lost during a lunch mishap on Sunday, August 3rd. This after a privately funded Space Exploration Technologies Corporation Falcon-1 rocket failed shortly after liftoff.

The cubesats lost were Presat and NanoSail-D. Both were part of the payload on board the third Falcon-1 rocket that was launched from the Reagan Test Site, in the Republic of Marshall Islands. Unfortunately the flight ended a couple of minutes later when a problem occurred with stage separation.

Space Exploration Technologies first effort to put a vehicle into orbit was back in March 2006. It failed due to a leaky fuel line. A year later, a second attempt had to be written off after the rocket made it into space but then wobbled off its vertical axis and tumbled out of control.

The primary payload on board the Falcon -1 was the Trailblazer satellite for the Jumpstart Program of the United States Department of Defense's Operationally Responsive Space Office If the satellites had reached orbit Presat and NanoSail-D would have operated in the 70 centimeter amateur radio satellite band. Whether or not the sponsors of either of the two lost ham radio birds will try again at some later date is at airtime unknown. (ANS, other reports)

**

RESCUE RADIO: VK TO DEVELOP RADIO LOCATION EMCOMM FINDER

A new radio based technology to aid in search and rescue work is being developed by Australia's Commonwealth Scientific and Industrial Research Organization or CSIRO. Trevor Taege VK4BAT, of the W-I-A News has the details:

--

CSIRO has signed a $1 million collaboration to develop the technology for emergency purposes in conjunction with Emergency Management Australia (EMA), Australian Radiation Protection and Nuclear Safety Agency and the National Security Science and Technology Branch within the Department of

the Prime Minister and Cabinet.

Federal Attorney-General, Mr. Robert McClelland, who is the Minister responsible for EMA, says the technology could prove "an invaluable tool for Australian emergency service workers, especially when searching for injured or lost people in hazardous situations.

The system use radio frequency tracking technologies and consists of a network of wireless nodes which can be combined with sensors to enable monitoring of environmental variables.

The System could see emergency personnel sent into dangerous situations wearing sensors which monitor their heart rate and core temperature, as well as gas or radiation levels in the surrounding environment.

Trevor Taege VK4BAT for VK1WIA News

--

If it works, the new high-accuracy radio based terrestrial localization systems would be suitable for applications as diverse as tracking workers in emergency situations to following cyclists racing around a track. (WIA News)

**

RESCUE RADIO: NEW NEXT OF KIN NOTIFICATION STANDARD

Emergency workers searching for next-of-kin contact information for an injured person now have a globally recognized way of doing so, thanks to a new standard from International Telecommunications Union.

According to the organizations' July 23rd release, simply prefixing the Arabic numerals 01, 02, 03, and so on to a nominated contact, written in any script in the mobile telephone directory, will help emergency workers in any part of the world identify contacts in order of priority and notify them. For example, 01 for father or 02 meaning wife and 03 standing for a husband.

The International Telecommunications Union says that it will work with non-profit organization ICE 4 SAFETY to promote this new way of identifying an emergency contact in a mobile handset's directory. The new standard, which is a clause to ITU-T Recommendation E.123, internationalizes the ICE concept and recommends the use of Arabic numerals 0 through 9 to denote emergency contact numbers. (ITU release)

HAM RADIO ON THE NET: QRZ.COM AYS NO MORE POLITICAL DISCUSSIONS

No more non ham radio politics will be permitted on one of the worlds best known ham radio websites. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

The QRZ.com website has banned discussion of political issues that are not directly related to ham radio. This as it takes down its Political Junkie discussion pages due to abuse by a number of those posting to it.

In a statement on the site its owner Fred Lloyd, AA7BQ, said that he really would have preferred that the Political Junkie forum remain open. However, the rudeness, hate, and vicious nature of many of its participants, killed it.

Lloyd went on to say that for every reasoned and articulate argument there were at least 10 that were either senseless or otherwise non-contributing. AA7BQ added that nobody at QRZ dot com wanted to police the postings and letting it go completely un-moderated would have been an even worse disaster.

Reaction to the decision to remove the Political Junkie discussion area from the website has been generally supportive. Most of those who opposed the change say that the Political Junkie discussion area was their main reason for coming to QRZ dot com. Very few say that they are likely to abandon posting on the site in the other areas that are directly related to ham radio.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

On a much happier note, QRZ dot com has announced that it is about to launch a new service designed especially for web-enabled PDA's and Smart Phones. This will give folks fast and convenient access to QSL information wherever cellphone coverage is available, 24 hours a day. The new service provides access to the QRZ Callsign Database that is optimized for the small screens found on most web enabled phones. The callsign data is presented in a simple text style with no images, graphics or biography data. You can read more about both these items and comment at www.qrz.com. (ARNewsline(tm) from information on QRZ.com)

ENFORCEMENT: FINE AFFIRMED FOR SELLING NON CERTIFIED CB RADIO

The Federal Communications Commission has affirmed a $7000 fine it issued to Michael T. Kersnowski doing business on the World Wide Web as www.radioactiveradios.com. This after the Salem, Oregon, resident failed to reply to a Notice of Apparent Liability issued for willful and repeated violation of the Communications Act and the Commission's Rules dealing with

the sale of non-certified Citizens Band transceivers

Back on March 28th, the Enforcement Bureau's Portland Resident Agent Office
issued a Notice of Apparent Liability for Forfeiture in the amount of $7,000 to Kersnowski for offering for sale non-certified CB transceivers. Despite evidence that Kersnowski and his counsel received the Notice of Apparent Liability, Kersnowski has not filed a response. Based on the information before us, the FCC has now affirmed the forfeiture and given him 30 days to pay it or to file an appeal.

A check of the company's website shows its still in what it calls the competition radio business. (FCC)

**

ENFORCEMENT: UNLICENSED FLORIDA TRANSMITTER ORDERED OFF THE AIR

The Miami FCC Office has told a West Palm Beach resident to take an unlicensed transmitter off the air. Bill Pasternak, WA6ITF, has the details:

--

In a July 10th letter to John Venuti the FCC says it received information that an unlicensed broadcast radio station on 101.1 MHz was allegedly operating in the West Palm Beach, Florida area. On June 18th agents from that office confirmed by direction finding that radio signals on 101.1 MHz were emanating from property owned by Venuti.

The FCC letter demanded that Venuti immediately cease operation of the unlicensed transmitter. He was also told that failure to comply could lead to severe sanctions that might include seizure of the offending radio equipment, substantial monetary fines and even criminal sanctions including imprisonment. A high price to pay for having an unlicensed station on the air.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

John Venuti was given the customary 10 days from the date of the letter to respond to it. That period is now past. (FCC)

**

RADIO TECHNOLOGY: COMMITTEE RECOMMENDS MOVING AM BROADCAST BAND

A group made up primarily of broadcast consulting engineers has proposed that the United States AM broadcast stations be made to move to TV Channels 5 and 6. This, after their current occupants of that spectrum migrate to digital.

The group, calling itself the Broadcast Maximization Committee, recommends the conversion and migration of all AM stations over an extended period of

time and with digital transmissions only. It also proposes relocating the LPFM service to a portion of this spectrum.

The group made its proposal in a filing to the FCC as part of the broadcast diversity proceeding in Docket 07-294.. Other organizations also used the proceeding to discuss how the radio spectrum should be structured; but the Broadcast Maximization Committee comments are likely to draw new attention to the plight of AM stations and possible ways to help the occupants of that broadcast band cope with changing technology. (RW)

**

RADIO LAW: FCC OK'S XM SIRIUS SAT RADIO MERGER

The XM and Sirius Satellite radio merger has been approved by the FCC. According to the Wall Street Journal and Broadcasting & Cable Magazine the 3 to 2 vote came late Friday, July 25th. This, after most FCC staffers had gone home.

In order for the deal to go through XM and Sirius have agreed to pay about $20 million for their unauthorized use of certain terrestrial relay stations and for marketing overpowered FM modulators used in certain models of mobile receivers.

The merger which was opposed by terrestrial broadcasters and public advocacy groups is expected to save both companies 10's of millions of dollars in operating expenses. Had it not been approved its likely that one or the other of the nations only two satellite radio broadcasters would eventually have failed. (Published reports)

**

NAMES IN THE NEWS: EI4GXB NEW IARUMS COORDINATOR FOR IRELAND

Some names in the news. First up is Ger McNamara, EI4GXB. He has been appointed the new International Amateur Radio Union Monitoring System Coordinator for Ireland.

The International Amateur Radio Union Monitoring System has a well-documented file of successful actions taken against intruders on the amateur radio bands. The latest of these from Ireland being the shutdown of church broadcasts on 10 meter FM.

Hams in Ireland are welcome to communicate with McNamara to report intruders, or for any information on the monitoring system. Contact him by e-mail to ei4gxb at g mail dot com. (Southgate)

**

NAMES IN THE NEWS : W6AWO SAYS KPH IS STILL SENDING MORSE

Richard Dillman, W6AWO, reports over the W-I-A News that the KPH transmitting and receiving sites north of San Francisco are one of the last places left where one can see a real coast station in operation. Their transmitters cause the whole building to vibrate as their mercury vapor

rectifiers flash in time with the Morse being sent. At the receive site the operating room is flooded with the music of Morse as it was in the golden years.

For those who can't pay a visit, 3 videos will give you an idea of days at the station. The videos include "KSM Station Operations", "Antenna Maintenance at KPH/KSM" and "Press Wireless PW-15 Transmitter". To see them go to Web site www.radiomarine.org/ and scroll down to "MRHS Videos". (WIA News)

THE SOCIAL SCENE: D-STAR REPEATERS AT HAM FAIR 2008

Two temporary D-Star repeaters will be available for hams attending this year's Ham Fair in Tokyo, Japan. JP1YJJ dash A will output on 439.25 with a minus offset. JP1YJJ stroke B will output on 1291.33 and also will use a minus offset. Both machines will be on the air from 01:00 to 08:00 U-T-C on August 23rd and 24th. If you come from a nation with reciprocal agreements with Japan and want to use the repeaters please stop by the Japan amateur radio League's booth at Ham Fair 2008. (D-Star Remailer)

**

THE SOCIAL SCENE: INTERNATIONAL YL MEET IN SOUTH AFRICA

An International YL Meet is scheduled to be held in South Africa. This, during October when YL's and their partners will be arriving from Japan, Korea, Germany, Sweden, Norway, Canada, Australia and France.

The tour starts on 0ctober 3rd at the Lesedi Cultural Village in the Cradle of Mankind. From there they will visit the Pilanesberg National Park and then travel to Durban and Cape Town. For details contact ZS6ZEN for the Johannesburg and Cape Town events and ZS5JAN for the Durban event. Addresses and e-mail for each can be found under their calls on QRZ.com. (SARL News release)

**

SOCIAL SCENE: 30 CLIPPERTON DX CLUB HAMVENTION SEPT IN FRANCE

This year's Clipperton DX Club Hamvention will be held in town of Chasseneuil du Poitou, France on September 19th and 20th. The venue is the Campanile Poitiers-Futuroscope Hotel. For more information about forum activities including dinners, please visit www.cdxc.org/index-f.htm

Also, listen out fot special event station TM8CDX to be activated from September 6th to the 20th as a part of the Clipperton festivities. If you make contact the QSL Manager is F5CQ. (News release)

**

THE SOCIAL CENE: ASIA PACIFIC DX CONVENTION IN NOVEMBER IN JAPAN

And hams from around the world are cordially invited to attend the 2nd annual Asia Pacific DX Convention. The event is slated for November 7th through the 9th at the Osaka International House in Osaka, Japan. In addition to the usual presentations and technical sessions, attendees will be given the chance to tour the tour the internationally famous electronics district, visit the Icom factory and to participate in a question and answer session with Icom engineers. More information on this very special ham radio gathering and its tours is on-line at www.apdxc.org. (OPDX)

EMERGING TECHNOLOGY: REPORT SAYS THAT HIGHER IBOC POWER MEANS MORE INTERFERENCE TO ANALOG

IBOC broadcasting is in the news once again and the story is again interference to existing analog operations. Jim Meachen, ZL2BHF, reports:

--

If you think that a power increase for In Band On Channel or IBOC broadcasting will increase interference, you are correct. So says N-P-R Labs which has released the results of its 18-month study of elevated FM IBOC power levels.

Leslie Stimson of Radio World says that it is now possible to get a handle on the meat of the probable interference issues to analog reception if the digital power levels are raised by 10 dB. And according to the CGC Communicator, not even Special Temporary Auhority's or experimental authorizations for higher powered operation appear to be warranted at this time. This, because analog listeners hit by interference will have no idea where the problem is coming from, and NPR indicates that plenty of interference will occur. An IBOC signal heard on an analog receiver is essentially nothing more digital noise.

For the Amateur Radio Newsline, I'm Jim Meachen, ZL2BHF

--

To read NPR's summary of its IBOC engineering study go to http://www.nprlabs.org/research/drcia.php) (CGC Communicator)

EMERGING TECHNOLOGY: ELECTRONS BEHAVE LIKE LIGHT IN CRYSTAL

A team of researchers at Princeton University's Materials Research Science and Engineering Center has observed electrons moving through a crystal of bismuth while behaving like light.

The Princeton group fixed a crystal of bismuth onto a flexing beam, or cantilever, and then placed this apparatus in a high magnetic field created at the National High Magnetic Field Laboratory. This device can generate magnetic fields that are more than a million times stronger than the earth's faint magnetic field. Under such an enormous magnetic field the cantilever twists. The way it twists tells the Princeton researchers about the subtle new kind of matter in the bismuth crystal.

Scientists are very excited by this discovery. They say that the research which was supported by the National Science Foundation and detailed in the journal Science, could lead to new kinds of news electronic devices. (Science OnLine)

HAM RADIO IN SPACE: AMSAT UK PACE COLLOQUIUM SLIDE SHOWS ON LINE

Presentations from the AMSAT-UK Colloquium have been added to the to the AMSAT-UK website as slide shows Currently there are 15 presentations online at www.uk.amsat.org. You will find some of the 2007 presentations there as well. (ANS)

**

HAM RADIO IN SPACE: THE PERSEID METEOR SHOWER ON AUGUST 12

Meteor scatter enthusiasts attention. The annual Perseid meteor shower peaks on Tuesday, August 12th. The best time to see them and make contact by bouncing signals off their ionized tails is during the dark hours before dawn on Tuesday morning when forecasters expect 50 to 100 meteors per hour.

The source of the Perseids is Comet Swift-Tuttle, which has littered the August portion of Earth's orbit with space dust. The dusty zone is broad and Earth is already in its outskirts. As a result, even before the peak on August 12th, you may see some "early Perseids" streaking across the night sky. (VHF Reflector)

WORLDBEAT - BRAZIL: PY4HP IN THE LABRE UHF CONTEST VIDEO

Turning to news from around the world, word that video of the PY4HP operation in grid square G G 77 A H during the recent Brazilian LABRE UHF Contest is now on the YouTube.com video sharing website. It shows how the station at 2070 meters above sea level that managed to make contact with 37 stations in 6 other grid squares. This which is considered quite a feat from that location on those frequencies. You can see it for yourself at: http://www.youtube.com/japydxgroup (PY2ZX)

**

WORLDBEAT - COLUMBIA: FIRST HD RADIO TEST CONDUCTED IN BOGATA

An FM station in Colombia is the first in that country to air High Definition Radio. This, according to Broadcast Electronics which says that Tropicana 102.9 is airing digital using Broadcast Electronics brand of H D Radio transmission equipment. The installation is part of a test granted under temporary authorization by the broadcast governing agency in Colombia, and is being conducted in the country's capital city of Bogota that has a population 9 million. The station is owned by the Caracol Radio Network. (BE)

**

WORLDBEAT - INDIA: COSTAL DISTRICT FORMS DISASTER HAM RADIO SERVICE

From India word that the Orissa State Disaster Mitigation Authority has decided to install 21 ham radio stations in seven districts, including six coastal ones. This, say officials is due to the fact that an amateur radio network can easily communicate when other communication services fail during natural disasters .

Scientists and other officials of National Institute of Amateur Radio have already trained 100 young people to operate ham the radio stations in the Orissa area. The Orissa State Disaster Mitigation Authority had asked the Institute for their assistance in the youth rescue radio training program. (India News Today)

DX

In D-X, word that F5NHJ portable F K , will be active from Grand Terre Island from August 12th to the 29th. He also plans to activate other islands all with an emphasis on 30 meter CW and the digital modes. The log for these operations will be uploaded to the Logbook to the World.

IZ1DSH should be on from Tavolara Island through August 17th. He plans to operate 40 through 10 meters mostly on SSB. QSL via bureau or direct to his home call.

OZ8KR, will be active from Svalbards capital city from August 12th to the 17th. He plans mostly in SSB on 20 meters and says to check his preferred frequencies of 14.220 and 14/260 MHz. QSL via home call.

And F5TGR, will be QRV Aug 9th to the 23rd from Porto Vecchio, Corsica using CW and SSB. Listen out for him on 10 through 40 meters. He says that trips to other islands are possible as well. QSL direct or via bureau.

Lastly, 6V7L will be the call of F8ATM in his operation from Senegal through August 22nd. He plans to work mostly SSB and RTTY on all of the High Frequency bands. QSL F8ATM direct or via bureau to.

(Above from various DX newsletters and DX news sources)

**

THAT FINAL ITEM: BROADCASTING IN THE SOUTH PACIFIC

And finally this week the story of broadcasting in the South Pacific over the past half century. John Williams,VK5BUI, of the WIA News takes us on a trip through time:

--

50 years ago, the last of the baby boomers was born, and radio broadcasting was still in its infancy in most parts of the Pacific. Australia and New Zealand had a combined population of about 12.3m people and shared only 2.6m radio receivers amongst them.

The ABC was about to end experimental FM broadcasts in the main centers, and the only FM station in the entire Pacific region was KAIM-FM in Honolulu. The most powerful island shortwave radio station was Radio Tahiti, serving 75,000 local listeners in the year that General Charles de Gaulle became French president and Sputnik 1 fell to earth.

Shortwave broadcasting was also the only form of radio in the Cook Islands, New Caledonia and Dutch New Guinea. In Western Samoa, 2AP was celebrating its tenth anniversary. No stations broadcast in Tonga or the New Hebrides Condominium and only a few hours daily came from the new stations in the Gilbert & Ellice Islands Colony and the British Solomon Islands Protectorate.

US Armed Forces Radio stations left over from World War 2 were still on the air on islands like Midway and Johnston and the relatively new Fiji Broadcasting Commission was still using shortwave radio from VRH4 Suva.

I'm John, VK5BUI

--

To think that all of this took place in only over the last fifty years. (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's WIA News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937,
Arcadia, California 91066.

Please don't forget that next Friday, Saturday and Sunday, August 15th to the 17th is the Huntsville Hamfest at the Von Braun Center in Huntsville Alabama. Amateur Radio Newsline will be there to present the 2008 Young Ham of the Year Award to Emily Stewart, KC0PTL. We hope to meet some of you there as well.

But if you cant be there in person you can visit the Huntsville Hamfest vicariously. This, as our friend Tom Medlin, W5KUB, streams live audio and video of the event to the Internet. Tom's transmissions begin at 1300 UTC on August 15th. You can watch live at www.wa5kub.com.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Damron, N8TMW, saying 73 and we thank you for listening.

==> ARRL BOARD OF DIRECTORS NAMES 2007-2008 AWARD RECIPIENTS

The ARRL Board of Directors named six ARRL award recipients at its July 18-19 meeting in Windsor, Connecticut. The six awards conferred were the 2008 Philip J. McGan Memorial Silver Antenna Award; the 2007 Herb S. Brier Instructor of the Year Award; the 2007 Hiram Percy Maxim Award; the 2007 Doug DeMaw, W1FB, Technical Excellence Award; the 2008 ARRL Technical Innovation Award, and the ARRL Technical Merit Award.

* The Philip J. McGan Memorial Silver Antenna Award
<http://www.arrl.org/pio/mcgan/>

The recipient of the 2008 McGan Award is Walter Palmer, W4ALT, of Lewes, Delaware. Palmer, the ARRL Delaware Section Public Information Coordinator (PIC) <http://www.arrl.org/FandES/field/org/pic.html>, has demonstrated outstanding volunteer public relations success on behalf of Amateur Radio at both the local and state levels. Palmer wrote a television script for the Sussex County (Delaware) Emergency Operations Center, providing the public with an awareness of Amateur Radio and its relationship with Emergency Preparedness. This show was broadcast on the largest television station in the Delaware market. Through his positive messages and commitment to Amateur Radio, membership in the Sussex Amateur Radio Association increased almost 200 percent, gaining 69 new members; participation in ARES grew from just one lone member to 60.

The McGan award is named for Philip J. McGan, WA2MBQ (SK), the first chairman of the ARRL's Public Relations Committee. After his death, friends in the New Hampshire Amateur Radio Association joined with the ARRL Board of Directors to pay a lasting tribute to the important contributions he made on behalf of Amateur Radio. The McGan Award goes to that ham who has demonstrated success in Amateur Radio public relations and best exemplifies the volunteer spirit of Phil McGan. Public Relations activities for which the McGan Award is presented include efforts specifically directed at bringing Amateur Radio to the public's attention (and most often the media's) in a positive light. This may include traditional methods, such as news releases, or non-traditional methods, such as hosting a radio show or being an active public speaker.

* Herb S. Brier Instructor of the Year Award
<http://www.arrl.org/FandES/ead/award/herb-tor.html>

The recipient of the 2007 Herb S. Brier Instructor of the Year Award is Doug Loughmiller, W5BL, of McKinney, Texas. Since 2003, Loughmiller has worked to bring together the Fannin County Amateur Radio Club and the Fannin County Community Emergency Response Team (CERT) by creating and teaching ongoing Amateur Radio classes. Loughmiller advertises the classes and recruits students; graduates of the classes usually end up joining both clubs. He mentors his many students about the wide-ranging facets of Amateur Radio, including high altitude balloon flights and real-world emergency response in the aftermath of Hurricanes Katrina and Rita. Loughmiller's classes are so popular, it is common for licensed amateurs to re-enroll or even take his class for a first time knowing they will walk away from it having learned something new.

Herb S. Brier, W9AD, long-time CQ Novice Editor, represented the spirit of effective, caring Amateur Radio instruction. The ARRL, in conjunction with the Lake County (Indiana) Amateur Radio Club, sponsors this award in his memory to recognize the very best in volunteer Amateur Radio instruction and recruitment.

* The Hiram Percy Maxim Award
<http://www.arrl.org/FandES/field/awards/hpm.html>

The recipient of the 2007 Hiram Percy Maxim Award is Jim Fagan, KE7IDC, of Tucson, Arizona. Fagan, an ARRL Life Member, is the ARRL Arizona Assistant Section Manager for Youth; he also serves as secretary/treasurer of the Tucson Repeater Association. He is 13 years old. Fagan teaches the Radio and Electronics merit badges, as well as hands-on radio demonstrations and kit building in his Scouting activities. Outside of Boy Scouts, Fagan helps out with bike races, walkathons and Red Cross drills. He serves as the Tucson Repeater Council's representative to the Arizona Radio Council. Every month, he writes a Youth and Scouting article for the ARRL Arizona Section newsletter.

This award, given annually to a licensed radio amateur under the age of 21, takes into account the nominee's most exemplary nature of accomplishments and contributions to both the community of Amateur Radio and the local community.

* The Doug DeMaw, W1FB, Technical Excellence Award

The recipient of the 2007 Doug DeMaw, W1FB, Technical Excellence Award is John Stanley, K4ERO, of Rising Fawn, Georgia, for his article "Observing Selective Fading in Real Time with Dream Software" published in the January/February 2007 issue of QEX <http://www.arrl.org/qex>. Stanley was first licensed as KN4ERO more than 50 years ago, gradually working his way up to Amateur Extra class. He graduated from the Massachusetts Institute of Technology with a degree in electrical engineering in 1962 and did six years of graduate studies in theology and foreign languages. With Ruth, WB4LUA, his wife of 40 years, Stanley has visited 62 countries and operated from about a dozen of them while working as a broadcast engineering consultant and educator. He has taught in several universities and has worked for all of the major religious broadcasters, but spent the majority of his time with HCJB in Quito, Ecuador where he oversaw the use of a 24-element quad antenna for broadcasting on the 21 MHz shortwave broadcast band. While at HCJB, Stanley designed and built several transmitters and did major work on the 20 kW unit presently used by HCJB for SSB and Digital Radio Mondiale (DRM) broadcasts.

Established in 1975 as the ARRL Technical Excellence Award, the name was changed in 1997 to honor the late Doug DeMaw, W1FB, a former ARRL Headquarters technical editor and well-known Amateur Radio author. The award consists of an engraved 9 inch pewter cup.

* The ARRL Technical Innovation Award
<ARRL%20Technical%20Innovation%20Award>

The recipient of the 2008 ARRL Technical Innovation Award is Dave Bernstein, AA6YQ, of Wayland, Massachusetts. Bernstein authored and published the DXLab suite of programs for radio amateurs <http://www.dxlabsuite.com/>; he has placed these programs in the public

domain for free use and collaboration. Bernstein, an avid DXer, was one of the earliest logging program authors to investigate functions for ARRL's Logbook of The World (LoTW) <http://www.arrl.org/lotw>, as well as programs for other developers. His DXLab suite consists of eight programs that cover every aspect of station operation. Bernstein goes beyond simply supporting DXLab; he mentors users in other aspects of programming and Amateur Radio.

The ARRL Technical Innovation Award is granted annually to the licensed radio amateur or to individuals who are licensed radio amateurs whose accomplishments and contributions are of the most exemplary nature within the framework of technical research, development and application of new ideas and future systems in the context of Amateur Radio activities.

* ARRL Technical Merit Award

The ARRL Technical Merit Award, last given in 1976, is awarded to ARRL Laboratory Manager Ed Hare, W1RFI. Since 2003, Hare has diligently and skillfully led the ARRL laboratory staff in studying the detrimental effects of Broadband over Powerline (BPL) usage on the Amateur Radio community <http://www.arrl.org/tis/info/HTML/plc/>. Going beyond the dictates of his job, Hare conducted field studies of geographically dispersed BPL deployments in his personal HF-equipped car, interfacing with amateurs in many different areas of the country to provide them with reliable and objective technical advice in identifying and addressing harmful interference from BPL systems.

Hare's extensive technical studies and solid factual data effectively supported ARRL's Court of Appeals submissions against the FCC, thus contributing substantially to the League's success in causing the FCC's flawed BPL rules to be remanded to the FCC. This action positively impacts ARRL membership and the whole amateur community.

Hare has earned the respect of technical representatives in the BPL industry and standards organizations, such as the IEEE P1775 BPL EMC Committee; the IEEE EMC Society Standards Development Committee (serving as Chairman of the BPL Study Project), and the ASC 63 EMC Committee (serving as Chairman of Subcommittee 5 -- Immunity and the Ad hoc BPL Working Group). Through these committees, Hare has contributed to the implementation of advancements in BPL technology, directly resulting in the capability of current generation BPL systems to reduce interference potential to acceptable levels.

==> NCVEC HOLDS ANNUAL CONFERENCE VIA TELEPHONE

On July 25, the National Conference of Volunteer Examiner Coordinators (NCVEC) held their annual meeting via teleconference. ARRL VEC Manager Maria Somma, AB1FM, and Assistant Manager Perry Green, WY1O, represented the ARRL VEC. Representatives from 12 of the nation's 14 VECs (either in person or via proxy), as well as the FCC's Bill Cross, W3TN, took part in the teleconference.

Elections

NCVEC held elections for 2008/2009. Moving up from vice chairman, Larry Pollock, NB5X, of W5YI VEC was elected Chairman, replacing Tom Fuszard, KF9PU, of the MRAC VEC; John Johnston, W3BE, of the LARC VEC, was elected as Vice Chairman. Roland Anders, K3RA, of LARC VEC, was elected as Chairman of the Question Pool Committee (QPC). The ARRL's Green, W5YI's Pollock, MRAC's Fuszard and Anchorage VEC's Jim Wiley, KL7CC, were appointed as members of the QPC; Anders, Green and Pollock are returning QPC members.

The following amateurs were re-elected to their position by acclimation: Michelle Cimbala, WK3X, of LARC VEC, as Secretary and Custodian of Records; Gene Wright, WA6ZRT, of the GEARS VEC, as Assistant to the Custodian of Records; Ray Adams, W4CPA, of the WCARS VEC, as Treasurer; Willard Sitton, W4HZD, of WCARS, as Assistant to the Treasurer, and Fred Maia, W5YI, of W5YI VEC, as Rules Reporter.

Question Pool Committee

Wiley presented the QPC report. Wiley, who served as QPC Chair for 2007/2008, stated that the committee strived to make the questions in the Amateur Extra class license question pool easier to understand <http://www.ncvec.org/page.php?id=351>. A few changes were made after the release of the pool, and the implementations of those changes seem to be going smoothly, he said. He reminded the Conference that there will be no question pool releases in 2009.

Win Guin, W2GLJ, proxy for the GLAARG VEC, asked Wiley why the QPC released a second version of the Extra class pool. Wiley replied that the QPC sent a copy of the pool to VECs before its release; only a few VECs responded with comments. Only after the release of the pool to the public, Wiley said, did the QPC receive a substantial number of comments for corrections and changes.

Anders confirmed this, saying that most of the comments received after the release were not major, but there were a significant number of them. The QPC carefully reviewed the comments, and the second release of the pool was seen as a way to clarify the way the questions were worded. Pollock agreed, noting that only eight questions were removed from the pool, and about 12 typographical errors were corrected in the re-release.

FCC Matters

Bill Cross, W3TN, an analyst in the FCC's Wireless Telecommunications Bureau -- Mobility Division, told the Conference that from an FCC perspective, the VEC system was working quite well. He said they had received very few complaints about test sessions or the availability of test sessions.

Cross also notified the Conference that his office has received some complaints from hams who have let their licenses expire. These hams, Cross said, are upset that they have to take a new test after their two

year grace period has expired.

Cross then spoke of items pending in Washington that may impact exam question pools. He mentioned a petition filed by the ARRL, asking the FCC to amend rules relating to the amount of RF power that stations may use when transmitting spread-spectrum emissions. Cross said this petition is being handled by the FCC's Office of Engineering and Technology (OET); he said a decision on this petition has the possibility to affect a few questions in the pools. He also told of a petition dealing with the 5 MHz (60 meter) band; the ARRL is requesting that a channel substitution be made. If approved, this would also change a few questions. Cross said that the Commission would need to solicit comments on both petitions before a decision is reached, and a Report and Order would need to be released if the rules are changed. He said he felt that no question pool changes would need to be made before next summer at the earliest.

Cross mentioned that his office has had some difficulties with club call sign applications. It seems, Cross said, that some hams are sending in applications requesting to change the trustee of a club station, but these hams are not authorized to change either the trustee or the station address. He called on Club Station Call Sign Administrators (CSCSA) to watch this carefully and try to head off any potential problems. He suggested that administrators get documentation that the person requesting the change is actually the new trustee of the club license and is acting with the authority of the club.

1x1 Call Signs

Anders said he was concerned about the possible misuse of 1x1 -- or special event -- call signs, saying that he had received reports of a large number of these special call signs showing up in radiosport contests. He said in looking at the Special Event Call Sign System guidelines -- posted on the NCVEC Web site <http://www.ncvec.org/1x1.php> -- he did not think contests fit the FCC's definition of a special event as something of general or widespread interest. He said that if the Conference decides that it is not in their purview to provide guidance on what should be a special event, the Conference should delete the definition from the NCVEC Web site.

Cross said that the NCVEC has no responsibility for the 1x1 call sign program. He told the Conference that when the FCC devised the 1x1 program, they left the definition of a special event -- an event of interest to the ham radio community -- vague on purpose. He said the Commission envisioned 1x1 call signs being used at open houses, fairs, parades, celebrations of anniversaries of local events and the like. He said a contest does not commemorate an event; rather, those with a 1x1 call sign in a contest have an advantage with a short call sign. He said contest sponsors could have a rule not allowing 1x1 call signs.

Pollock said that after the 1x1 database was developed, they had to find a place to host it; as a matter of convenience, it was placed on the NCVEC Web site. Somma, Green and Pollock urged that the 1x1 database and related Web pages be moved to its own site, with Pollock heading up this project. Somma said the FCC rules state that the database must be maintained, but does not state on what Web site it is to be maintained. To clarify issues with the 1x1 call signs, language on the NCVEC Web site will be changed to reflect that the Conference has nothing to do with the 1x1 call sign program, and pages associated with the program will be moved to their own site as soon as possible.

The 2009 meeting of the NCVEC was tentatively set for July 24 in Gettysburg, Pennsylvania.

==> LOOK FOR THE SEPTEMBER ISSUE OF QST IN YOUR MAILBOX

The September issue of QST -- our annual Emergency Communications issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs, with a special focus on Public Service. From product reviews to experiments to contesting, the upcoming issue of QST has something for just about everyone.

Bob Bruninga, WB4APR, provides details on how hams can use APRS and GPS in Emergency Communications (and other applications) for more than simply tracking the position of another user in his article "Maximizing the Mobile Motorist Mission." William McMurray, K4SG, takes a look back at some resourceful young amateurs' radio EmComm and homebrewing adventures in his article "World War II Emergency Radio." Mike Kionka, KI0GO, tells about "Project 25 for Amateur Radio," an open digital standard used by many public service agencies.

ARRL Contributing Editor Gary Pearce, KN4AQ, reviews ICOM's IC-92AD dual band handheld transceiver. According to Pearce, "The IC-92AD is a very capable radio for analog and D-STAR digital VHF/UHF operation. It's expensive compared to analog-only dual-banders, and you'll need to spend some time learning the digital features. In return, D-STAR offers many capabilities not available in the analog world."

Contest season is right around the corner, so ARRL Contest Branch Manager Sean Kutzko, KX9X, takes a look at his mailbag and answers a few questions he has received in "This Month in Contesting." The results of the 2008 ARRL DX Phone Contest are in. Did you top your score from last year? How did your closest rival do? Also, find out about upcoming contests in Contest Corral.

Of course, there are all the columns and features you know and love in September QST: Hints & Kinks, The Doctor Is IN, How's DX, Old Radio, Technical Correspondence, ARRL VEC and Emergency Communications Honor Rolls, Hamspeak and more. Look for your September issue in your mailbox. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please see the ARRL Web page <http://www.arrl.org/join>.

==> FORMER ARRL HQ STAFF MEMBER GLENN SWANSON, KB1GW (SK)

Former ARRL Headquarters staffer, Glenn P. Swanson, KB1GW, of North Granby, Connecticut, died August 1 after a brief illness. He was 54. In the mid-1990s, Swanson was very active in contesting activities, and served a term as Yankee Clipper Contest Club (YCCC) Connecticut Area Manager and was a contributor to the YCCC newsletter <http://www.yccc.org/>. Swanson was extremely interested in new Amateur Radio equipment and products -- especially transceivers -- and authored several QST product reviews.

First licensed in 1987 as a Novice, Swanson credited Peter Budnik, KB1HY - who became a fellow ARRL staffer -- for getting him involved in Amateur Radio. Swanson told then-QST Product Review Editor Rick Lindquist, WW3DE (ex-N1RL) in 1996 that "Peter was my best friend, and he was really into CB. I became involved, too. Later, when Peter decided to take an Amateur Radio licensing class, it was natural that I'd go along with my buddy and take the class, too!" Swanson said he and Budnik "climbed the licensing ladder together," from Novice to General. "And here we are years later, both Advanced class and both working at ARRL HQ -- in the same department."

Swanson first came to the ARRL in January 1993 as the Assistant to Bart Jahnke, KB9NM, then-ARRL VEC Manager. Two years later, Swanson moved to the former Educational Activities Department (EAD) -- later merged with Field Services -- for several years. In his role in EAD, Swanson was involved with the Shuttle Amateur Radio Experiment (SAREX -- the predecessor to the Amateur Radio on the International Space Station ARISS), scouting's Jamboree on the Air (JOTA) and the ARRL Instructor of the Year Award.

"Glenn was an enthusiastic ARRL staff member and Amateur Radio operator," said Lindquist. "He would even stay after hours to assist me in the product review process, and he made me feel at home when I first arrived at ARRL HQ. In addition, he got me involved with YCCC and serious contesting. Glenn was a great guy." Swanson wrote more than a dozen articles and product reviews for QST between 1995 and 1997.

Former EAD Manager Rosalie White, K1STO, his former supervisor, said, "I always liked Glenn and was happy to have him in the department. His death was such a shock!"

Swanson left ARRL HQ in 1998, going to work for the West Hartford (Connecticut) public school system as a technology support specialist. He was employed there at the time of his death. A memorial service was held August 7 in Granby, Connecticut.

==> STATION MANAGER EXPLAINS NN3SI'S SILENCE

ARRL has received numerous e-mails asking for information on why NN3SI <http://americanhistory.si.edu/events/programdetail.cfm?newskey=48>, the Amateur Radio station at the Smithsonian Institution's National Museum of American History (NMAH) was closed after more than 32 years of operation <http://www.arrl.org/news/stories/2008/07/30/10231/?nc=1>.

According to Hal Wallace, NN3SI Station Manager and Associate Curator for the Museum's electricity collections, there will be no appropriate place to house the station once the Museum reopens this fall after undergoing an extensive renovation.

"NN3SI ceased operating from the National Museum of American History on July 31," Wallace told the ARRL. "As you may know, NMAH has been undergoing a renovation of the building's infrastructure and interior for some time. The renovation forced us to remove the Information Age exhibition -- the station's home since 1990. We placed the station in a temporary location for the duration of the renovation but it cannot remain there when we reopen to the public later this year. The Information Age exhibit will not be reinstalled, and since we have no other appropriate exhibition areas within the Museum, the station had to cease operations at NMAH. Various alternate locations throughout the Smithsonian have been considered but none are viable at this time."

Wallace said that the station's license is valid until 2013 and its equipment will go into storage: "John Johnston, W3BE -- NN3SI's trustee -- assures me that a renewal of the license would not be an issue if we need one. Should a suitable exhibition area elsewhere in the [Smithsonian] Institution be found, we will be able to reactivate the NN3SI activity."

==> FIFTH ANNUAL NATIONAL PREPAREDNESS MONTH COMING IN SEPTEMBER

The US Department of Homeland Security announced in July that more than 1200 national, regional, state and local businesses and organizations -- including several Amateur Radio groups -- have pledged their support and joined the 2008 National Preparedness Month Coalition <http://www.ready.gov/america/npm08/intro.html>. Sponsored by the department's "Ready" campaign, National Preparedness Month helps to raise awareness and promote action by Americans, businesses and communities on emergency preparedness.

"As we approach our fifth National Preparedness Month, I want to thank the hundreds of coalition members who are making a difference in their communities by helping raise the basic level of preparedness in our country," said Homeland Security Secretary Michael Chertoff. "Individual preparedness is the cornerstone of emergency preparedness. Experience shows that if Americans take steps ahead of time, they stand a much better chance of coming through an emergency unharmed and recovering more quickly."

"The 'Ready' campaign and Citizen Corps <http://www.citizencorps.gov> are specifically encouraging individuals across the nation to take important preparedness steps," said ARRL Public Relations and Media Manager Allen Pitts, W1AGP. "These steps include getting an emergency supply kit, making a family emergency plan, being informed about the different emergencies that may affect them, as well as taking the necessary steps to get trained and become engaged in community preparedness and response efforts."

National Preparedness Month Coalition members have agreed to distribute emergency preparedness information and sponsor activities across the country that will promote emergency preparedness. Membership is open to all public and private sector organizations. Sign up your club or ARES group now! Groups and individuals can register to become members by visiting the Ready Web site <http://www.ready.gov> and clicking on the National Preparedness Month banner.

For more information on the Ready Campaign and National Preparedness Month, please visit <http://www.ready.gov> or <http://www.listo.gov> for information in Spanish. Information is also available by phone at 1-800-BE-READY or 1-888-SE-LISTO (in Spanish).

According to Pitts, linking up with the Ready.gov people and participating in September's National Preparedness Month is "an easy win. The federal people are already doing all the hard work. All you really have to do is sign up. Most clubs and ARES groups are already doing activities which fit into their structure, so why not get credit for your actions? Of course, if you do something more with this opportunity, so much the better! But you have to sign your group in and no one can do that for you. There are hundreds of ARES groups and clubs in the country. Wouldn't it be fun to have even 70 percent of them sign up and get noticed?"

==>SOLAR UPDATE

Substituting for Tad Cook, K7RA, Carl "The bright Suns I see and the dark Suns I cannot see are in their place" Luetzelschwab, K9LA, this week reports: For the reporting period August 1-7, solar activity was at very low levels and the geomagnetic field was at quiet levels. Solar activity is expected to continue to be very low for the next several days. As for geomagnetic field activity, the Australian Space Forecast Centre issued a geomagnetic disturbance warning on August 6 for quiet to unsettled, and then unsettled to active conditions (with possible minor storm periods) on August 8 and August 9, respectively. Sunspot numbers for July 31-August 6 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.5, 66.1, 66.2, 65.5, 66.2, 66.5 and 67 with a mean of 66.1. Estimated planetary A indices were 4, 3, 3, 4, 4, 3 and 4 with a mean of 3.6. Estimated mid-latitude A indices were 4, 2, 2, 3, 3, 3 and 5 with a mean of 3.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Walt Whitman's "Leaves of Grass."

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the WAE DX Contest (CW) and the Maryland-DC QSO Party are August 9-10. The SKCC Weekend Sprintathon is August 10 and the NAQCC Straight Key/Bug Sprint is August 13. Next

weekend, be sure to check out the ARRL 10 GHz and Up Contest on August 16-17. The NCCC Sprint is August 15. The Feld Hell Sprint and the ARCI Silent Key Memorial Sprint are August 16. On the weekend of August 16-17, look for the SARTG WW RTTY Contest, the Russian District Award Contest, the Keyman's Club of Japan Contest and the North American QSO Party (SSB) to be on the air. The New Jersey QSO Party is August 16, 17 and 18. The Run for the Bacon QRP Contest is August 18. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 24, 2008 for these online course sessions beginning on Friday, September 5, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* New ARRL Section Manager Appointed in Nevada: Joe Giraudo, N7JEH, has been appointed Section Manager of the Nevada Section effective August 15. ARRL Membership and Volunteer Programs Department Manager Dave Patton, NN1N, made the appointment after Dick Flanagan, K7VC, announced his resignation for health related reasons. Flanagan, of Minden, has served as Nevada Section Manager since January 2003. Giraudo, who lives in Spring Creek, will complete the current term of office that continues through June 30, 2009. A Professional Engineer and graduate of the University of Nevada, Giraudo is an experienced licensing instructor and ARRL Volunteer Examiner. He is currently Nevada Assistant Section Manager, as well as a District Emergency Coordinator; he also holds appointments as Net Manager, Public Information Officer and Official Emergency Station within the Nevada Section. Giraudo served as Nevada Section Emergency Coordinator from 1994-2000.

* Jack B. Morgan, KF6T, Wins July QST Cover Plaque Award: The winner of the QST Cover Plaque Award for July is Jack B. Morgan, KF6T, for his article "Portable Two Element 15 Meter Yagi." Congratulations, Jack! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the August issue by Sunday, August 31.

* October is Radiosport Month in QST: We here at ARRL HQ are excited over the theme of October's QST -- radiosport! In addition to feature and technical articles focusing on contesting -- ranging from the history of radiosport to a product review of a rig geared for the avid contester and DXer -- ARRL Contributing Editor H. Ward Silver, N0AX, has put together an 8 page insert focusing solely on radiosport. This section features such articles as how to interpret your Log Checking Report (LCR), guidelines for the upcoming contest season and a list of resources that no contester should be without, as well as a listing of major contests throughout the year. Of course, no issue of QST would be complete without "Contest Corral" and "This Month in Contesting." Look for an announcement by ARRL Contest Branch Manager Sean Kutzko, about how 2009 is the Year of the State QSO Party. Be sure to check out October QST -- in your mailbox in September -- to find out more about this exciting new event.

* Georgia Hams Meet with FEMA: On July 30, representatives from the ARRL Southeastern Division and Georgia Section participated in the FEMA Region IV, Regional Emergency Communications Coordination (RECC) Working Group meetings near Atlanta. Southeastern Division Director Greg Sarratt, W4OZK; Georgia Section Manager Susan Swiderski, AF4FO, and Georgia Section Official Observer Coordinator Michael Swiderski, K4HBI, represented ARRL and Amateur Radio. In the meetings, Sarratt talked about ARRL, ARES, Amateur Radio and their value to FEMA, while Susan Swiderski gave a talk on MARS. "We are proud to be a part of FEMA's RECC," Sarratt said. "This will help to enhance FEMA and ARRL's working partnership. It is very beneficial to meet any of the communications leadership of FEMA and other agencies in the region. These meetings, coordination and learning about each other are critical elements before the disaster strikes. I was also very happy to meet several Amateur Radio operators attending the meeting in their professional capacity." Headquartered in Atlanta, FEMA's Region IV territory includes Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee. Region IV is FEMA's largest geographic region and the most common challenges are tornados, hurricanes and other storms that can cause flooding and flash flooding. -- Thanks to Greg Sarratt, W4OZK

* AMSAT-UK Colloquium Lectures Now Online: AMSAT-UK held their 23rd Annual International Space Colloquium July 25-27 at the University of Surrey in Guildford <http://www.uk.amsat.org/content/view/32/42/>. This annual event <http://www.arrl.org/news/stories/2008/07/21/10219/?nc=1> is a chance to talk to satellite designers and builders, as well as a place to discover how to use Amateur Radio satellites. The British

Amateur Television Club (BATC) streamed the Colloquium live on the Internet and has placed videos of nine lectures on their Web site <http://www.batc.tv/channelphp?ch=1>.

* International Lighthouse/Lightship Weekend 2008: More than 380 lighthouses in more than 51 countries -- from Argentina to Wales -- will be on the air for 2008 International Lighthouse/Lightship Weekend (ILLW) <http://illw.net/> organized by the Ayr Amateur Radio Group (AARG) in Scotland <http://www.gm0ayr.org/>. The event, held for the 10th year in a row, takes place from Saturday, August 16 0001 UTC to Sunday, August 17 2359 UTC. While not a contest, the ILLW is more of a QSO Party and Amateur Radio demonstration. The ILLW aims to raise public awareness of lighthouses and lightships and the need for their preservation and restoration, promote Amateur Radio and foster international goodwill. Stations at more than 40 US lights are expected to be on the air for the event, and several stations will identify with special event call signs. Participating lighthouse/lightship stations do not have to be inside the structure or on the vessel itself; a Field Day-type setup at or adjacent to the light is sufficient. More information about the event, including a registration form, is available on the ILLW Web site <http://illw.net/2008_list.htm>.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

The flux number seems permanently stuck at 66, with an occassional spike all the way up to 67.

Could it be that the decline in homebrewing and self-repair of our equipment, resulting in less release of solder fumes, is affecting that number?

Solar flux? Solder flux? Could they be related?

Or are these guys on strike ----> http://www.fluxfactory.org/

They both affect my mux, cost a lot of bucks, aren't good for any yucks,
and are about as interesting as hockey pucks.

Amateur Radio Newsline(tm) Report 1618 - August 15, 2008

Note: Do to staff travel to the Huntsville Hamfest for the 2008 YHOTY presentation, this newscast is being released about 20 hours early this week -- WA6ITF

**

Amateur Radio Newsline report number 1618 with a release date of Friday, August 15th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two Nebraska hams are murdered in a senseless act of violence, a Tennessee town threatens to arrest a pair of FCC inspectors but backs away and the story of an elderly ham who goes to the store to buy a new radio. Wait until you find out how he got there. All this and more on Amateur Radio Newsline(tm) report number 1618 coming your way
right now.

**

ENFORCEMENT: HAM RADIO COUPLE MURDERED IN NEBRASKA

Authorities in Nebraska have a 34-year-old homeless man in custody who they believe was involved in the weekend deaths of a ham radio couple living in rural Lancaster County. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has the details of the arrest following a rather horrific crime:

--

Lancaster County Nebraska Sheriff Terry Wagner says that Brandon Christopher Crago has been arrested on suspicion of robbery and vehicle theft. He is also being held in connection deaths of Steven Baily, N0US and his wife Carolyn, N0LAL.

According to the Sheriff's Office, its deputies were called to the Baily residence around noon on Sunday August 10th at the request of a neighbor. That's when authorities found the remains of the two murdered radio amateurs. Joe Eisenberg, K0NEB, lives in Lincoln. He knew N0US and N0LAL. He tells Newsline that the local ham radio community is in horrified by what happened to their friends::

--

Eisenberg: "The first reaction is total and utter shock and disbelief that something like this could happen right here in Lincoln, Nebraska, let alone to two such wonderful people and totally at random. Its just a total shock to us and there is great sadness and heavy hearts amongst all of us here."

--

According to news reports, the story began to unfold early Sunday morning. At about 7:20 a.m. Central time, Lincoln police were called to a robbery in the Northeast area of the city. That's where a armed man entered a home and demanded the keys to a 1993 Jeep Grand Cherokee.

An hour later, deputies found the Jeep idling at an area Southwest of town. The residents of the property reported their blue and silver 2005 Toyota Camry was missing.

Later on Sunday, detectives were able to connect the Bailys' deaths to the robbery as well as the two vehicle thefts. Joe Eisenberg, K0NEB, says that Crago was a wanted man before the alleged Sunday crime spree:

_
Eisenberg: "He lived here in town as a homeless person and was in and out of drug rehabilitation and was being sought by the Feds on multiple drug charges. In fact, he was just about to be arrested by the Federal authorities on drug distribution charges."

--

Police also believe Brandon Christopher Crago may have been involved in an additional crime on Sunday morning. A man matching his description broke into a home between 7:30 and 9:30 a.m.. The suspect assaulted a 46-year-old man who was sleeping on a couch and stole about $80 cash.

According to a police report, Crago attempted suicide at a motel where he was staying before being taken into custody. He allegedly stabbed himself in the chest in an attempt to peace his own heart, but the injuries were not life-threatening.

For the Amateur Radio Newsline, I'm Bill Pasternak, in the newsroom in Los Angeles.

--

Authorities say that Crago has had several local arrests for drugs and assault dating back to 1994. They are still looking into whether he had an accomplice this time or if he acted alone.

**

ENFORCEMENT: ABOUT THE VICTUMS

And what about the victims of this seemingly senseless crime? According to Joe Eisenberg, K0NEB, both Steve Baily, N0US and Carolyn Baily, N0LAL, were in their early 60's and were well liked. They were also heavily involved in the local ham radio community:

--

Eisenberg: "They were very nice people. They would go out of their way to help out. He was an active storm spotter and they were active members of the Ashland Amateur Radio Club and helping to put on the annual hamfest, and they were always very supportive of their club and of amateur radio."

--

K0NEB says that he and Steve Baily, N0US, had something in common. Like Eisenberg, Baily was a computer service technician by trade. Both traveled the region and quite often chatted on the air:

--

Eisenberg: "Almost every day we would talk with him and hi wife over the Ashland Radio Club repeater or the Lincoln repeater. Sometimes we wound even talk on .52 simplex because I would run across his car as we were driving along down the Interstate and I would wave hi."

--

As to Carolyn Baily, N0LAL, her other interest was dogs. A longtime 4 H leader, she served a number of terms as an officer with the Cornhusker Kennel Club. Her favorite breed were Boxers and she had two as pets.

The Baily's are survived by their grown daughters Jennifer Baily of New York and Heather Burns in Washington along with her husband Greg, and their two children. At airtime funeral arrangements for N0US and N0LAL are pending. (ARNewsline, K0NEB, published news reports)

RADIO LAW: TENNESSEE TOWN WONT CHARGES FCC INSPECTORS WITH IMPERSONATING POLICE OFFICERS

Charges won't be filed against two Federal Communications Commission agents
who allegedly told Church Hill, Tennessee police they were with the states Bureau of Investigation Meth Task Force this past June. Burt Hicks, WB6MQV, has the details:

--

The TimesNet dot com electronic newspaper says that arrest warrants had been written but not served against two FCC investigators who were in Church Hill, Tennessee, on an undercover mission last spring. The FCC agents were in the town on June 10th investigating complaints made by the neighboring Mount Carmel Police Department that someone was continually "keying over" radio transmission made between one of its officers and Hawkins County Central Dispatch.

The TimesNet story says that the FCC agents decided to use a cover story that they were part of a Tennessee Bureau of Investigation Meth Task Force. The on-line newspaper quotes a Church Hill Police Department report that says that on June 10th about 11 p.m. Officer Danny Depew stopped an

SUV with Alabama license plates. This, after it pulled onto Main Boulevard from a parking lot without its headlights on.

According to the report, the two male occupants of the SUV stated they were "state Meth Task Force agents" although they didn't have credentials. Mount Carmel Fire Chief and Police Officer Chris Jones, who actually is a member of the states Meth Task Force came to the scene to vouch for them.

In his report Officer Depew stated that he later talked about the traffic stop with Officer Chip Whitaker. They discussed the possibility that the men in the SUV were not what they claimed and were only impersonating officers.

Depew and Whitaker then stopped the SUV in the Food City parking lot shortly after midnight and spoke again to the undercover FCC investigators. Again they identified themselves as Meth Task Force agents, and again Chief Jones arrived on the scene to vouch for their identity.

The FCC agents were released, but the incident was later turned over to the Tennessee Bureau of Investigation. On Friday, August 1st the Church Hill police received confirmation that the men in the SUV were not Meth Task Force agents or any other type of local, state or federal law enforcement officers. Instead they were FCC employees who were in the area working on a radio complaint.

The Church Hill Police Department prepared warrants charging both men with multiple counts of impersonating police officers but held off serving them after Tennesese Judicial District Attorney General Berkeley Bell advised against it. Bell told the TimesNet dot com that he was leaving the decision whether or not to charge the FCC investigators to Church Hill, but he was very much against it.

Also, as others observed, there was also the possibility that the FCC might go into Federal Court and charge the Church Hill Police Department or its officers with impeding a federal investigation. Either way, for now the case has been shelved.

--

The jamming problem had been ongoing for several months prior to the arrival of the FCC agents. It reportedly ended suddenly after the incident with FCC investigators in Church Hill on June 10th. The complete story is on-line at http://www.timesnews.net/article.php?id□07575 (TimesNet.com, others)

ENFORCEMENT: RUSSIAN HAMS WARNED TO STAY OFF UK AIR FORCE FREQUENCY

Two unnamed amateur radio enthusiasts in the Ulyanovsk region of Russia whom authorities say were the source of unintentional interference to U.K. Air Force pilots have been ordered off of a formerly secret radio frequency used in Russia.

About a month ago United Kingdom telecommunications officials complained to Russian radio authorities that from time to time airborne communications was hindered by some Russian citizens using the same frequency. The British were able to establish that the signal came from the Volga district. Russian telecommunications personnel found the culprits to be a pair of amateur radio enthusiasts aged 25 and 50.

The pair of hobbyists were not charged with any crime. However they were advised to register with the local ham radio club and toi use only official amateur radio frequencies.

There has been no further complaints from U.K. pilots according to the telecommunications spokesman. (Adapted from Interfax on-line report)

EMERGING TECHNOLOGY: HF DIGITAL VOICE VIA ECHOLINK

Amateur Radio operators seeking to experiment with High Frequency Digital transmissions now have a new option. EchoLink users may now access club station W6AOR dash L via the internet. Amateur Radio Newsline's Jeff Reinhardt, AA6JR, says it's a member of the ham radio supply industry that's making this service available:

--

The W6AOR Echolink High Frequency ham radio station is located at AOR USA headquarters in Torrance, California. AOR is a leading supplier of receivers and digital voice modems.

Taka Nakayama KW6I, is the trustee for W6AOR. He said the suggestion to create an EchoLink accessible station came from a number of different sources. He says that putting the station together was just a matter of assembling a few spare parts, a Kenwood transceiver, a digital modem and then hooking up internet access.

W6AOR transmits and receives on 14.236 USB through a digital modem using the G4GUO digital protocol through a "barefoot" Kenwood transceiver into a
vertical antenna. The W6AOR EchoLink HF station will allow hams who do not yet have their own digital modem to make contacts with digitally-equipped stations. Taka Nakayama adds that the station can also be used to participate in digital nets and to verify the correct installation or operation of a similarly-equipped digital station.

KW6I says that the station was put on the air for the enjoyment of all radio amateurs. He also says that it is a way to give the ham radio community the ability to experiment with the emerging world of High Frequency amateur radio digital voice communications.

For the Amateur Radio Newsline, I'm Jeff Reinhardt, AA6JR.

--

Echolink use of W6AOR is open to all properly licensed operators at no cost. Those in need of information on how to use EchoLink are encouraged to visit www.echolink.org (AoR)

NEWSLINE FOLLOW-UP: MORE ON WIRELES MICS IN THE BROADCAST SPECTRUM

A follow-up to our recent story regarding a complaint filed Wednesday, July 16th, by the Public Interest Spectrum Coalition. It charged that manufacturers of wireless microphones use deceptive advertising in the way they market them. Also, that they sell high end, wireless microphones to people who the coalition claims are not legally permitted to use them.

Now comes word that the Federal Communication Commission's Office of Engineering and Technology is currently field testing the performance of prototype White Space Devices which use the same free broadcast television spectrum as the theatrical wireless microphones. These so-called TV white spaces have been used for years to support microphones for sporting events, stage shows, live TV broadcasts and church services and other events.

FCC spokesman Alan Stillwell said that these tests were to examine the ability of white space devices to detect the signals of TV stations and wireless microphones. They are also looking at the potential for a transmitter operating in the white spaces to interfere with TV reception and wireless microphone operations.

As we reported two weeks ago, the Public Interest Spectrum Coalition is recommending that the FCC immediately act to halt sales of wireless microphones that operate between TV channels 52 and 69. It also wants the FCC to require microphone manufacturers replace all the older units now in use. It also recommends that the government agree to a general amnesty for unauthorized microphone users. Where this latest FCC move leaves the Public Interest Spectrum Coalition and its demand that all wireless mics stop using this same spectrum is very hard to say. (RW, others)

RESCUE RADIO: FEMA TO ADOPT CAP 1.1 WARNING PROTOCOL

In the first quarter of 2009, the Department of Homeland Security's Federal
Emergency Management Agency intends to adopt an alerting protocol in line with Common Alerting Protocol 1.1. This, as the standard for the Integrated Public Alert and Warnings System.

The Integrated Public Alert and Warnings System or I-PAWS is a network of alert systems through which FEMA is upgrading the Emergency Alert System. FEMA says EAS participants, including broadcasters and state and local emergency managers, must be in compliance with the CAP 1.1 standard within 180 days of its formal adoption.

FEMA's partners in developing the CAP 1.1 profils include the National Weather Service; the Federal Communications Commission; DHS Science & Technology Directorate's Command, Control and Interoperability Division; Emergency Interoperability Consortium; Organization for the Advancement of Structured Information Standards; and the International Association of Emergency Managers. (FEMA, RW)

RESCUE RADIO: EMCOMM EAST TRAINING CONVENTION IN ROCHESTER NY

Still with rescue radio news, Reno Nevada's Emcommwest emergency communications ham radio conference now has a namesake some 2300 miles to the East. Its called the EmComm East Convention and Conference and it will be held September 20th in Rochester, NY.

EmComm East is billed as an ARRL sanctioned amateur radio emergency communications conference, where amateur radio operators involved in EmComm can attend training sessions on technical topics. Experts in various special interests will be discussing such communications systems as APRS, WinLink and a new open source web-based dispatching technology. Attendees will also be able to purchase equipment and supplies from vendors, learn from served agencies, obtain license upgrades, and interact with other emergency communications operators from all over the area.

Army MARS and the National Registry of Certified EmComm Volunteers will be in attendance. Dennis Dura, K2DCD, the Emergency Preparedness and Response Manager for the ARRL will be the days keynote speaker.

A $30 pre-registration fee required and seating at the sessions is limited. For more information, please visit othe www.emcommeast.org or request it by e-mail to info@emcommeast.org (Repeater Reflector)

**

ENFORCEMENT: NYC AREA FINE FOR UNLICENSED OPERATION

The FCC has fined the alleged operator of a New York City area unlicensed radio station $10,000. Feeling the FCC's sting this time is Jean Idalbert who is accused of operating an unlicensed radio transmitter on the frequency 90.9 MHz in the borough of Brooklyn.

Back this past April 29, the Commission's New York Field Office issued a Notice of Apparent Liability for Forfeiture in the amount of $10,000 to Idalbert. Despite evidence that Idalbert received the notice, Idalbert has not filed a response.

Based on the information before it the FCC affirmed the forfeiture on August 6th. Idalbert was given the usual 30 days to pay or to file an appeal. If Idalbert fails to pay the fine the matter would likely be sent to the Department of Justice for collection and other possible punitive actions. (FCC)

**

HAM HAPPENINGS: COMMEMORATING HAM RADIO IN HURRICANES KATRINA AND RITA

The Southeast Louisiana Amateur Radio Club will commemorate the landfall of hurricanes Katrina and Rita. This, when special station K5R takes to the airwaves from 14:00 to 20:00 hours UTC on Saturday, September 13th in remembrance of those tragic events.

K5R will operate SSB 7.250 and 14.250 MHz plus or minuus any QRM. QSL's go to Scott Hernandez, K5R, 957 Nancy St.,Mandeville, LA 70448. More information is on-line at www.selarc.org This is the third year that this on the air commemorative operation is being held. (Press Release)

**

NAMES IN THE NEWS: N7JEH REPLACES K7VC AS NEVADA SM

Joe Giraudo, N7JEH, has been appointed Section Manager of the Nevada Section effective August 15. ARRL Membership and Volunteer Programs Department Manager Dave Patton, NN1N, made the appointment after Dick Flanagan, K7VC, announced his resignation for health related reasons.

Joe Giraudo, who lives in Spring Creek, will complete Flanagan's current term of office that continues through June 30, 2009. A Professional Engineer and graduate of the University of Nevada, Giraudo is an experienced licensing instructor and ARRL Volunteer Examiner. He is currently Nevada Assistant Section Manager, as well as a District Emergency Coordinator; he also holds appointments as Net Manager, Public Information Officer and Official Emergency Station within the Nevada Section. Giraudo served as Nevada Section Emergency Coordinator from 1994-2000.

Outgoing Section Manager Dick Flanagan, K7VC, is from fMinden, Nevada has served as Nevada Section since January 2003. He was also a driving force behind the creation and success of the Emcommwest convention held annually in Reno.

Prior to his relocating to Nevada, Flanagan lived in Los Angeles, California where he held the call W6OLD. During his years in the L.A. area he helped to establish the Southern California Repeater Association (SCRA) and served a number of terms as the organizations chairman. Some of his work with the SCRA lead to the FCC deregulating repeaters in the latter 1970's. That in turn brought on the boom in repeater growth that continue unabated to this day. (ARRL, ARNewsline(tm))

**

THE SOCIAL SCENE: PACIFICON IN CALIFORNIA IN OCTOBER

Turning to the ham radio social scene, word that Pacificon will take place October 17th through the 19th at the San Ramon Marriott Hotel in San Ramon, California. Sponored by the American Radio Relay League's Pacific Division and the Mt. Diablo Amateur Radio Club, Pacificom is the premiere ham radio show for Northern California and neighboring states. This years gannd banquet speaker is Dr. Jill Tarter, the director of the Center for SETI Research at the SETI Institute in Mountain View California. More information about the convention and the banquet is on line at www.pacificon.org. (Pacificon)

**

THE SOCIAL SCENE: BARC FEST IN COLORADO IN SEPTEMBER

BARCFest 2008 sponsored by the Boulder Amateur Radio Club takes place on September 28th at the Boulder County Fairgrounds in Longmont, Colorado. Doors open to public at 8 a.m. Mountain time with talkin on the 146.70 repeater. Children age 12 and under are admitted free when accomp[anied by an adult. More information is on-line at www.qsl.net/w0dk. (Press Release)

**

THE SOCIAL SCENE: W9DXCC IN ILLINOIS IN SEPTEMBER

The Northern Illinois DX Association will once again sponsor the W9DXCC Convention and Banquet. This year the date is September 20th with the venue being the Ho1iday Inn in Elk Grove Village, Illinois. QSL card checking for various awards, an ARRL forum and a Grand Banquet are all planned. For more information please contact , Bill Smith, W9VA, by e-mail to w9va at ao1 dot com. (Press Release)

**

HAM HAPPENINGS: INTERNATION LIGHTHOUSE / LIGHTSHIP WEEKEND

More than 380 lighthouses in more than 51 countries from Argentina to Wales will be on the air for the 2008 International Lighthouse and Lightship Weekend. The event is organized by the Ayr Amateur Radio Group and will take place as this newscast goes to air the weekend of August 16th and 17th.

International Lighthouse and Lightship Weekend is more of a QSO Party and amateur radio demonstration than it is a contest. Participating lighthouse/lightship stations do not have to be inside the structure or on the vessel itself. The sponsors say that a Field Day-type station at or adjacent to the light is more than sufficient to be a part of this fun event. (Southgate, others)

**

EMERGING TECHNOLOGY: A LOOK AT HD RADIO GROWTH

Digital high-definition radio is hitting some key milestones in terms of pricing and features. To date, nearly 1,750 AM/FM stations covering 83% of the United States are broadcasting digitally. Another 800 offer original formats and content on HD on ansulary channels. This is according to iBiquity Digital which is the developer and licensor of HD radio technology.

And according to published news reports, the prices on some radio models have tumbled below $100. About 60 HD receiver models are now available in the, including table-top units and car radios from such leading consumer and audiophile brands as Panasonic, Yamaha, Denon, Polk and Harman Kardon. Among the manufacturers breaking through the $100 price point is Radiosophy, which specializes in HD radio receivers. The company's portable HD100 radio, which includes a clock radio and an input jack for an MP3 player, costs $49.95 after a $50 rebate. Also, more auto manufacturers are offering HD radio as a factory or dealer-installed option.

U.S. HD radio sales totaled about 300,000 units in 2007, with about 1 million more units expected to be sold before the end of 2008, iBiquity president Bob Struble remains optimistic that falling prices will finally jump-start the HD market. (RW)

HAM RADIO ON THE WEB: THE KNIGHT KIT T-50 GROUP

Todd Carpenter, N9YSQ, has started a new discussion group in honor of the Allied Radio Knight Kit T-50 transmitter. That was Allied Radios answer to the famed Heathkit DX 20 and used very similar circuitry.

Carpenter says that the new group is for rekindling memories about the T-50, gathering information for restoring these rigs, and creating a venue for users to make contacts with the T-50 based stations.

If you used one of these radios as a novice, use one now, or just love old gear, come check out the new group. The web address is Yahoo.com/group/knightT50group. You can also make contact at n9ysq@yahoo.com (N9YSQ)

**

WORLDBEAT - UK: G3LZQ REPLACES M0CBQ AS RSGB VHF AWARDS MANAGER

Turning to news from around the world, word, RSGB High Frequency Awards Manager, John Dunnington, G3LZQ, has now also taken on the administration

duties of the society's VHF awards as well. These were previously handled by Bill Salt, M0CBQ. The change of leadership is being taken as an opportunity to bring the rules for VHF and HF RSGB awards into line. In particular, all awards will be credited to individuals rather than a callsign. (GB2RS)

**

DX

In DX, word that DO7ZZ will be active from Croatia operating as VE3ZIK portable 9A until the 23rd of August. Activity will be on the High Frequency bands only, using CW, SSB, RTTY, PSK31, PSK63 and 10m FM. QSL to DO7ZZ via the bureau.

IK8VRH portable 5Z4 will be active from Kenya during the month of August. Operations are on 40, 20 and 17 meters using CW, SSB and RTTY. QSL as directed on the air.

Meantime, IK2RZP will be active stroke VP9 from Bermuda from through August 24th. Listen out for him mainly on SSB and the digital modes on 17 and 12 metres. QSL via his home callsign, direct or by the bureau.

F8ATM will be active from Senegal as 6V7L through August 22nd. His operation will be on all of the High Frequency bands using SSB and RTTY. QSL via his home callsign, direct or by the bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: OFF TO BUY A NEW RADIO

And finally this week, the story of a United Kingdom ham who only wantred a new radio but in trying to buy it he caused traffic chaos and sparked a police hunt to find him. Amateur Radio Newsline' Bruce Tennant, K6PZW, has more:

--

An unidentified 81-year-old United Kingdom radio amateur was eventually pulled-over by police. This, after they received a number of calls from worried motorists who had spotted him driving his 8 mph mobility scooter along the road separation median adjacent to the busy, 70 A-27 highway near the city of Portsmouth on Monday, August 4th. But not they could not find him until he was on his way back home. Here's the rest of the story.

.The intrepid senior citizen radio amateur had set off from his home near Havant some time before 11a,m... His destination was the well-known amateur radio retailer Nevada Radio. That's a trip of about seven miles to the town of Farlington on the outskirts of Portsmouth.

Reportedly, trucks and cars using the 70 MPH motorway were forced to swerve out of the way as the elderly ham and his scooter crawled along the middle median at what seemed to be a snails pace.

Mike Devereux is the Managing Director of Nevada Radio. He told the Southgate News that those in the store were amazed when the elderly ham turned up at the showrooms in his slippers and driving his motorized buggy. Devereux said that the he told store employees that he was getting back in to Amateur radio and wanted to buy an Icom 7400 and a power supply.

Unfortunately, or maybe fortunately, he could not remember his credit card pin number and ended up leaving Nevada empty handed. Police finally caught up with him shortly after 1 p.m. on his journey home. Reportedly they gave him some stern road safety advice after which he and his battery powered scooter were driven back home in a police van.

Only one question remains. Some wonder if the ham on the scooter had any plans to operate scooter mobile. Chances are that none of us will ever know.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, reporting

--

Although his four-mile trip on the roads median caused bumper to bumper chaos, under United Kingdom traffic regulations he was not breaking the law. This is because he was not on the motorway itself. (Southgate)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. URL: http://www.panix.com/~rram/usenet/rram/index.html

Changes followed by "|".

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
```

promoting or defending unlawful activities, etc. Crossposts of regular discussion articles between rec.radio.amateur.moderated and other discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/ announcement postings may be crossposted to rec.radio.info, rec.answers, and news.answers only with prior approval of the moderators of those newsgroups. In all such cases, an appropriate "Followup-To" header, containing only rec.radio.amateur.moderated, will be added by the moderators if one is not already provided.

Posters are encouraged to state their own views and share their experiences, but to refrain from making assumptions about the motivations of other newsgroup participants. Posters are expected to maintain a basic tone of civility. Prohibited uncivil discourse includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness, suitability and/or readiness of any individual (or members of any group) to be an amateur radio operator are unacceptable in this newsgroup. If an individual chooses to post asking for advice on when or whether to obtain an amateur radio license, or to participate in any type of lawful activity in the Amateur Radio Service, respondents should be careful to address their comments only to the original poster and not explicitly generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur radio licenses, or certain members of national amateur radio societies (e.g., American Radio Relay League, Radio Amateurs of Canada, Radio Society of Great Britain, Wireless Institute of Australia, etc.), to be more or less worthy than others, are not permitted. Posts that politely encourage individuals to join their local amateur radio society, or to upgrade to higher classes of amateur radio license in order to enjoy greater operating privileges, are permitted, however. Posts that contain reasoned, civil, and fact-based discussion of the activities and internal politics of national amateur radio societies are also permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created for this purpose, and should be used instead. All such articles will be rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or other public relations campaigns will not be permitted. Relatively unbiased announcements or reviews of new amateur radio-related products or services may be permitted at the discretion of the moderators. Such posters are asked to disclose their financial or professional interest, if any, in such products or services.

Mentions of small amounts of free items for giveaway will be permitted |
on an occasional basis from casual, non-commercial owners, and at the |
discretion of the moderators. The items should be free except for |
reasonable direct costs such as shipping, must be directly |
amateur-radio-related, must be in serviceable condition, and be |
practical to ship to a distant recipient. This is intended as a |
common-sense exception to our ban on forsale postings, provided that it |
doesn't overwhelm the basic character of our discussion newsgroup with |
classified ads or requests to haul off scrap or junk in salvage |
condition. |

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with
the "netiquette" of Usenet as well as the particular posting guidelines
for this group. Several useful posts for "newbies" can be found on the
newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be
automatically rejected:

A) Articles that contain original text of more than 75 characters
per line
B) Crossposted articles to newsgroups not included in these
Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital
signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned
from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common
text. This may be a cute quip or quote, or may include information
about their family, contact information, or disclaimers required by
their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or

members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true." "That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/iportals/aboutus/ethics/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should

not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Posts that attempt to publicly criticize moderators or moderation decisions in the newsgroup itself are also not permitted, as stated in our original newsgroup charter. Please direct any such critical feedback to our administrative contact address at the bottom of this article, where it will be carefully considered by an appeals team of moderators. This team is distinct from the initial team of moderators that approves or disapproves article submissions, and thus can provide independent oversight of moderation decisions.

Similarly, if you see an obviously inappropriate article in our newsgroup, please assume that it was a mistake or a direct forgery. The moderation team makes every effort to protect the newsgroup from such incidents, but they do happen, albeit rarely. You may also submit feedback to the same address regarding such articles in our newsgroup, but it is likely that our monitoring software and procedures have already detected it, and we are actively handling the problem. Please resist "piling on" with followups to the newsgroup when these incidents occur, so that we don't have to reject such articles.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

It's already legal for many Region 1 operators to use 7100-7200; I've had
a number of simplex QSOs with Europeans up there.

(in other words, don't wait until next March!)

The SWBC problem on 40m is a LOT less than it was just a few years ago.
It's too bad that shortwave broadcasting in general had to be decimated t
o
achieve it...

888. New to Ham Radio

Newsgroup: rec.radio.amateur.moderated

Hi from KJ4DIY
Hi my name is Howard and my wifeï¿½s name is Carol and we have 7 Children and 9 Grandchildren. Iï¿½m 64 and this has been a dream of mine for a long time to join the ranks of The Amateur Radio Service. Iï¿½m looking to learn all I can about Ham Radio I have been a Shortwave and Scanner Listener for many years but I have always wanted to be an Amateur Radio Operator. Iï¿½m a relatively new only 4 months old in the hobby.

I enjoyed a piece on the ARRL website about childhood memories of Shortwave and Amateur Radio. The story brought back fond memories of my childhood.
My first radio was from Allied Radio in Chicago, Illinois the name of it was Ocean Hopper It came in kit form I remember the pleasure of putting it together.
In later years I purchased a Radio Shack DX 160 I still have it and it works only had to replace the panel lamps once.
I also bought an ICOM R75 Comm. Rec. and used a long wire antenna of about 250 ft. with a MFJ-956 Pre-Selector/Antenna Tuner.
I had dreamed of getting my Amateur ticket for many years but I had a hard time trying to learn Morse code.
I was at a local Amateur Radio Store ï¿½AESï¿½ and Jim Stout W9QC a salesman there suggested I get my ticket seeing how there was no code test anymore.
The rest is history as they say.
Just recently I passed my Extra test did all three of the tests in 2 ï¿½ months got 100% on all.
At the age of 64 Iï¿½m putting together my first station I have an ICOM 718, MFJ 949E antenna tuner and a G5RV dipole antenna.
I also have an ICOM T7H dual band HT.
I just recently applied for accreditation as a VE with W5YI-VEC and ARRL-VEC.
My W5YI-VEC accreditation will becoming in the mail soon.
I hope to have many opportunities to QSO with people all over the world some day
73ï¿½s

Welcome aboard, Howard.

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you didn't see a question concerning magic or metaphysics on the test you took to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1208 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to sommon the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

Welcome to the Magical Hobby

73, de Hans, K0HB

==> EDUCATORS GO "BACK TO SCHOOL" AT ARRL'S TEACHERS INSTITUTES

During a record six ARRL Teachers Institutes this summer -- Tampa,
Florida; Rocklin, California; Tucson, Arizona; Dayton, Ohio, as well as
two sessions at ARRL HQ in Connecticut -- instructors and participants
found new ways to bring the excitement of wireless technology to
classrooms across the country <http://www.arrl.org/FandES/tbp/ti.html>.
```

The ARRL Teachers Institute is a four day, in-service training opportunity for teachers to learn about wireless technology, including the science of radio, space technology, microcontrollers and basic robotics. It focuses on how to integrate these vital technologies into their regular classrooms. For the first time, the number of Teachers Institutes offered was expanded from four to six sessions that included 77 participants from 29 states. To help out with the expanded course load and number of sessions, two additional instructors were brought on board: Miguel Enriquez, KD7RPP, and Nathan McCray, K9CPO. According to Education and Technology Program Coordinator Mark Spencer, WA8SME, "These new instructors will allow the program to continue to expand in coming years. They also bring new perspectives and talent to the instructional staff."

Enriquez was first licensed as a Novice in 1976 and learned about electronics by building a Heathkit; he upgraded to an Amateur Extra class license in 2002. He teaches mathematics, statistics and psychology at Pueblo High School in Tucson, Arizona, and has 10 years of experience teaching at the community college and university levels. In 2005, Enriquez established an Amateur Radio club at Pueblo High School. Through donations of equipment and support from individuals and the ARRL, the club grew to 26 members and five licensed students exploring satellite communications, ATV, robotics, HF, EchoLink and weather satellite imagery.

McCray, a former sixth grade teacher in Zion, Illinois, starts the 2008 academic year as an assistant principal at West Elementary School in the same town. As a teacher, he integrated Amateur Radio, electronics and robotics into his science and math curriculum. He plans to start an Amateur Radio club in his new school and is looking forward to developing clubs in his district's junior high and high school. McCray's knowledge areas include electronics, computer programming, communications, Amateur Radio, computer systems, leadership and teaching; his background includes instruction at the community college level, as well experience as a senior instructor at a US Navy technical school. McCray has been licensed for 24 years and holds an Amateur Extra class license.

The teachers who participated in this year's Teachers Institutes came from very diverse backgrounds: 63 percent were hams. The gender mix included 64 percent males and 36 percent females. The participants came from schools across the grade levels: 17 percent were elementary, 39 percent middle school/junior high, 40 percent high school and 4 percent university level instructors. During the Institutes, 10 participants studied for and obtained either their first ham license or upgraded their existing ham tickets.

Spencer said that the Teachers Institute curriculum is always being refined and improved: "This year, a new robotics instructor's activity board was added to the robotics unit, and a 24-hour clock kit was added to the Soldering 101 unit. We also added a new, more flexible seismometer that can be used not only to study earthquakes, but also to

control the movements of the robot the participants build during the class. This component was added to connect the Science of Radio unit to the Robotics unit. A radio telescope and a sudden ionospheric disturbance (SID) exploration resource were also added, expanding the Space Technology unit. The 24-hour clock kit was a very popular 'homework' assignment that was completed during the first day of the Institute."

Funding for the ARRL Teachers Institutes for Wireless Technology and for the ham radio station grants for schools are supported solely by contributions from ARRL members and others in the Amateur Radio community. According to ARRL Chief Development Officer Mary Hobart, K1MMH, in 2008 the educational mission of ARRL has expanded to provide additional support for volunteer instructors and the development of additional online courses, as well as curricula and tools for teachers. "If you are one of the thousands of hams who has helped ARRL expand its education horizons, thank you!" Hobart said. "You may wish to make your contribution to ensure a bright future for the next generation of radio amateurs. Please do so by phone or mail to ARRL Headquarters, or on the Web <http://www.arrl.org/education>. Your generosity will make a big difference."

==> ARRL'S "BIG PROJECT" MAKES A BIG IMPACT ON YOUTH

Since 2001 when the Education & Technology Program -- also known as the "Big Project" -- started, ARRL has expanded the scope of its educational outreach programs by providing grants of station equipment and instructional resources for professional development to more than 300 schools (with more schools added each year) <http://www.arrl.org/FandES/tbp/>. The Education & Technology Program has expanded the highly successful teacher development program in electronics, robotics and space -- the Teachers Institute on Wireless Technology <http://www.arrl.org/FandES/tbp/ti.html>.

>From humble beginnings in 2003, a single gathering of 12 educators came together at ARRL Headquarters to become the Teachers Institute, with the goal to promote wireless technology literacy. Since then, the Teachers Institute has provided teachers from elementary schools to the university level with the basic tools and teaching strategies to introduce the science of radio, space technology, weather, microcontroller basics and robotics in their classrooms. In 2008, the Teachers Institute program has expanded to six four-day sessions that now include ATV and radio astronomy, more hands-on instruction of project kits -- such as a seismometer, a 24-hour clock and A BOT Instructor's Board -- to enhance the teachers' ability to instruct basic robotics, a fox-hunt activity and satellite contacts.

Each year, the League receives gratifying reports from the schools that participate in the Education & Technology Program. The schools tell us that the resources we offer are bearing fruit -- both in terms of licensing students and teachers and engaging them in wireless technology, both in the classroom and in after-school activities.

"The Education & Technology Program is truly one of ARRL's most significant projects," said ARRL Chief Development Officer Mary Hobart, K1MMH. "The contributions of ARRL members make a direct connection to teachers and their students, opening the door to Amateur Radio and other exciting areas of science."

==> FCC TO RAISE VANITY CALL SIGN FEES

On August 11, the FCC announced that the cost of an Amateur Radio vanity call sign will increase 60 cents, from $11.70 to $12.30 <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-08-182A1.pdf>. The fee will increase 30 days after notice of the increase is published in the Federal Register <http://www.gpoaccess.gov/fr/index.html>; no date has yet been set for publication. The FCC is authorized by the Communications Act of 1934, as amended, to collect vanity call sign fees to recover the costs associated with that program. The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new 10 year term.

The vanity call sign fee has fluctuated over the 12 years of the current program -- from a low of $11.70 to a high of $50. The FCC said it anticipates some 15,000 Amateur Radio vanity call sign "payment units" -- or applications -- during Fiscal Year 2009, collecting $184,734 in fees from the program.

The vanity call sign regulatory fee is payable not only when applying for a new vanity call sign, but also upon renewing a vanity call sign for a new term. The first vanity call sign licenses issued under the current Amateur Radio vanity call sign program that began in 1996 came up for renewal two years ago.

Those holding "personalized" call signs issued prior to 1996 are exempt from having to pay the vanity call sign regulatory fee at renewal, as Congress did not authorize the FCC to collect regulatory fees until 1993. Such "heritage" vanity call sign holders do not appear as vanity licensees in the FCC Amateur Radio database.

Amateur Radio licensees may file for renewal only within 90 days of their license expiration date. All radio amateurs must have an FCC Registration Number (FRN) before filing any application with the Commission. Applicants can obtain an FRN by going to the ULS and clicking on the "New Users Register" link <http://wireless.fcc.gov/uls/>. You must supply your Social Security Number to obtain an FRN.

The ARRL VEC will process license renewals for vanity call sign holders for a modest fee. The service is available to ARRL members and nonmembers, although League members pay less. Routine, non-vanity renewals continue to be free for ARRL members. Trustees of club stations with vanity call signs may renew either via the ULS or through a Club Station Call Sign Administrator, such as ARRL VEC.

League members should visit the "ARRL Member Instructions for License Renewals or Changes" page

<http://www.arrl.org/fcc/memberlicenseinstructions.html>, while the "Instructions for License Renewals or Changes" page covers general renewal procedures for nonmembers <http://www.arrl.org/fcc/licenseinstructions.html>. There is additional information on the "ARRL VEC's FCC License Renewals and ARRL License Expiration Notices" page <http://www.arrl.org/arrlvec/renewals.html>.

License application and renewal information and links to the required forms are available on the "ARRL Amateur Application Filing FAQ" Web page. The FCC's forms page also offers the required forms <http://www.arrl.org/FandES/field/regulations/application-filing-faq.html>.

==> THE ARRL VC AND VCE PROGRAMS: HAMS HELPING HAMS

Invariably, when an amateur wants to erect a tower and more antennas, there will be questions about zoning and building ordinances. According to ARRL Regulatory Branch Manager Dan Henderson, N1ND, some questions are simple, while others may lead to a long battle with town officials. "Rule number one in any of these cases," Henderson said, "is to make sure you know the legal landscape you are facing before you start any project."

Henderson said there are many tools to assist amateurs in navigating the perils of zoning and restrictions: "Among the most important resources are fellow amateurs who have stepped forward to serve as either an ARRL Volunteer Counsel (VC) or an ARRL Volunteer Consulting Engineer (VCE)."

ARRL VCs are fellow amateurs who are attorneys. They have agreed to provide a free initial consultation to hams facing town zoning issues related to the erection of Amateur Radio towers and antennas. ARRL VCEs are registered Professional Engineers (PE) who have likewise agreed to give hams an initial consultation when facing antenna support installation issues required by the town.

Henderson notes that VCs and VCEs provide their initial consult for free: "If you do need to retain them further to help you navigate through the 'red tape,' you need to be prepared to pay them for their professional services, though many VCs and VCEs do provide discounted rates if they assist long term."

The role of the VC and VCE is to assist amateurs with antenna and zoning issues, but Henderson said that some provide advice on other topics, such as helping a club through the process of incorporating, or a VCE serving as an expert witness before a town zoning meeting. "When facing an antenna fight, remember that VCs and VCEs -- along with other resources -- are there to assist you, but their role is secondary to yours," Henderson advised. "The amateur seeking to erect the tower has to take the lead, making sure that all required information from the town is provided promptly and as required. This includes bearing any costs associated with the permitting process or legal fees. If you follow the steps required by the city or town, and you don't take any

shortcuts and are reasonable in your approach, you should end up prevailing in the end."

The ARRL is looking for qualified and interested attorneys and registered Professional Engineers to step forward to serve as VCs and VCEs. "There is no better time to consider serving in these important but unsung volunteer positions than now," Henderson said. Right now, the ARRL has VCs in only 44 states and VCEs in 33 states. Applications for VCs <http://www.arrl.org/FandES/field/regulations/local/vcapp.html> and VCEs <http://www.arrl.org/FandES/field/regulations/local/vceapp.html> can be found online on the ARRL Web site. For more information on how you can assist as a VC or VCE, contact Henderson via e-mail <n1nd@arrl.org>.

If you need the services of a VC or VCE to help with your zoning problem, contact the Regulatory Information desk via e-mail <reginfo@arrl.org>. "We are happy to help you sort through the first steps or try to hook you up with a nearby VC or VCE. The ARRL VC/VCE programs are here to serve you, but we need your help."

==> ARRL EXECUTIVE COMMITTEE APPROVES NINE EDUCATION & TECHNOLOGY PROGRAM GRANTS

In May, the ARRL Executive Committee reviewed grant applications for the ARRL's Education & Technology Program (ETP), awarding nearly $14,000 to nine schools <http://www.arrl.org/FandES/tbp/>. More than 300 schools across the country have received support from the ETP in the form of grants for equipment, curriculum and resources, as well as teacher in-service training through the Teachers Institute on Wireless Technology <http://www.arrl.org/FandES/tbp/ti.html>. The Executive Committee reviews applications for equipment and resource grants twice each year, in December and May.

The following schools recently received equipment grants:

* Hamburg High School, Hamburg, New York: The lead teacher for this program is a recent graduate of the ARRL Teachers Institute and has some experience with practically applying ham radio in her classroom.

* Pioneer High School, Yorkshire, New York: The program articulated in the grant application has an EmComm theme and is an extension of an existing program.

* Pell City High School, Pell City, Alabama: The lead teachers for this program were participants in this summer's Teachers Institute. The program articulated in the grant application was thought to be aggressive and far reaching, and is supported by the local ham community, as well as by long term financial commitments on the part of the State and local governments.

* Washington Technical Middle School, St Paul, Minnesota: The lead teacher for this program attended the Teachers Institute this summer. The program in the grant application is supported by the local ham

community, including a retired Vice Director, Twila Greenheck, N0JPH. The school has already started on their program development by obtaining and using the Soldering 101 24-hour Clock Kit that is part of the ETP resource portfolio.

* Glenn Raymond School, Watseka, Illinois: The program suggested in this application is more broad and general, and suggests using ham radio as a support to other curricular areas. The Executive Committee felt this was a healthy approach to the use of ham radio and indicates a well thought out use of ham radio as a resource.

* Sayreville Memorial High School, Parlin, New Jersey: This application articulates a program that is based on setting up a ham radio station in the school that is part of an EmComm component of the school's county Office of Emergency Management.

The following schools received Progress Grants. These grants consist of resources, curriculum materials and instructional materials such as software or building kits:

* Egg Harbor Township High School, Egg Harbor Township, New Jersey: The lead teacher for this program has taken a different approach to making the connection between the science of radio and robotics fundamentals by focusing on basic electronics. He requested the parts and pieces to make a robotic arm resource for use in his class.

* Emanuel County Institute, Twin City, Georgia: The lead teacher for this program is a recent Teachers Institute graduate. He wants to expand the use of the activity board resources he learned about during the Institute into his regular curriculum.

* Gateway Technical Community College, Sturtevant, Wisconsin: This applicant is requesting assistance in obtaining licensing resource materials for the college radio club. The resources obtained through this grant will be housed in a club library for multiple users.

ETP participants continue to sing the praises of the ARRL and the Education & Technology Program. Here is what a few of them had to say:

* The ARRL has made our year! Words cannot express the gratitude that we feel because of the ARRL grant so generously provided to us. On behalf of the Rambler Radio Club of LaFayette Middle School, thank you. By the way, we are hosting Field Day for our sponsor club (Tri-State ARC). This will be their first Field Day in three years. They plan to have a GOTA station to encourage more people to get involved. Thanks to you and the thousands of ARRL members who have made the entire year seem like Christmas for us!
* Today, I received a phone call from our calculus teacher who introduced me to one of our senior students. She has been accepted to the University of Arizona and will be taking courses for electrical engineering; her ultimate plan is to someday work for NASA and become one of the astronauts. She was excited when I told her about being able to talk to the space shuttle -- sounds like she came to the right place

for the "right stuff." I happened to have the "Hello Radio" pamphlet available for her and also gave her an old copy of the Radio Amateurs Astronomy book. I wanted you to know how grateful I am to you and the ARRL for all you have done in helping Mohave High School get this off the ground, and as always, thank you for the great satellite images you send to us. One of the kids at school is using them to do an Independent Study course on weather.

* I just demonstrated the BOE-BOT's telemetry powers to my math students and BINGO! They were excited. One of them immediately demonstrated how the data on the spreadsheet could be graphed using three dimensional graphics, a lesson she had just had in her computer class last week. Another student set up different barricades to test the BOT's ability to get out of the maze. The BOT did it and then they started accusing each other that the BOT was smarter than them. The radio club members in the math class wanted to know what the schematic looked like for the design.

The goal of the Amateur Radio Education & Technology Program is to improve the quality of education by providing an educationally sound curriculum focused on wireless communications. The project emphasizes integration of technology, math, science, geography, writing, speaking and social responsibility within a global society.

==> ARISS TEAM LOOKING FOR GROUND STATIONS

Do you want to be part of the international network of ground stations that help support Amateur Radio on the International Space Station (ARISS) operations? ARISS is looking to add numerous ground stations capable of relaying ISS Amateur Radio sessions with schools and also serve as back-up communications relays should they be needed. Locations all over the world will be considered, but the greatest need for stations is in Central America, South America, Falkland Islands, Western Australia, Canada and Alaska.

The following are guidelines for stations wanting to be considered: Third Party agreement with United States or waiver from their telecom agency; ability to speak and understand English; minimal horizon obstructions; 24/7 access and availability of station; operator(s) willing to support scheduled contacts at various times; phone patch; AZ/EL tracking satellite system, preferably an auto tracking system with the capability for manual override; multi-element Yagis for 2 meters and 70 cm (circular polarization preferred); pre-amps and transmit output greater than 70 W. If you can specify your station's EIRP and receive sensitivity (thereby taking into account cable losses, pre-amps and antenna gain), it would be greatly appreciated.

Stations that can support the following will be given special consideration, but these items are not required: Auto Doppler adjustment of frequencies; ability to speak and understand languages other than English; 1.2 and 2.4 GHz satellite hardware; Packet; SSTV; Digital ATV; redundant power system, and high-speed Internet.

If you or your club would like to be considered for selection as one of the new ARISS ground stations, send an e-mail to ARISS with details about your station and contact information <ARISS-telebridge@amsat.org>. -- Information provided by Frank Bauer, KA3HDO, ARISS International Chairman

==>SOLAR UPDATE

Tad "Under the light of five hundred Suns" Cook, K7RA, this week reports: Our Sun is still not producing any sunspots. As mentioned in previous bulletins, the peak of the last Solar Cycle was a double peak, so perhaps we are in the midst of an extended bottom. Sunspot numbers for August 7-13 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 66.1, 65.5, 65.5, 65.6, 65.7, 65.2 and 65.3 with a mean of 65.6. Estimated planetary A indices were 4, 4, 18, 13, 7, 6 and 5 with a mean of 8.1. Estimated mid-latitude A indices were 3, 3, 16, 9, 6, 6 and 3 with a mean of 6.6. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Allen Ginsberg's "America."

==>IN BRIEF:

* This Weekend on the Radio: This weekend, be sure to check out the ARRL 10 GHz and Up Contest on August 16-17. The NCCC Sprint is August 15. The Feld Hell Sprint and the ARCI Silent Key Memorial Sprint are August 16. On the weekend of August 16-17, look for the SARTG WW RTTY Contest, the Russian District Award Contest, the Keyman's Club of Japan Contest and the North American QSO Party (SSB) to be on the air. The New Jersey QSO Party is August 16, 17 and 18. The Run for the Bacon QRP Contest is August 18. Next weekend, the NCCC Sprint is August 22. The Hawaii QSO Party and Ohio QSO Party are August 23-24. The SKCC Sprint is August 27. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 24, 2008 for these online course sessions beginning on Friday, September 5, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may

be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News August 29: There will be no ARRL Audio News on Friday, August 29; ARRL Audio News will resume production on Friday, September 5. The ARRL Letter will be distributed as usual.

* Harry Mills, K4HU (SK): Harry Judd Mills, K4HU, passed away Saturday, August 9 at the Cardinal Care Center in Hendersonville, North Carolina after a period of declining health. He was 100 <http://www.arrl.org/news/stories/2007/09/20/102/>. Mills was a resident of Hendersonville since his retirement in 1971 after a 30 year worldwide career with RCA as an engineer and manager. First licensed in 1922 as 8VHX, he was a 72 year member of the ARRL, a founder and past president of the Quarter Century Wireless Association (QCWA) Chapter 76 of Hendersonville and a fellow of the Radio Club of America (RCA). Mills was active on the air up until his death. He could be heard twice weekly checking into the AM net on 3810 kHz, as well as the Chapter 76 QCWA SSB net on Saturday mornings on 3930 kHz. Mills credited a crystal receiver project from "The Boy Scout Handbook," given to him by his parents when he was 12, for his interest in wireless and radio. Featured on the NPR program "All Things Considered" in 2001, Mills had this to say about the magic of radio: "To me it is difficult to describe the fascination of it. I know I use it all the time. How does it happen? Can't see the fella. There are no wires going from here to there. But you can talk to him. It was a phenomenon that interested me from the beginning. I presume that it is safe to say I've never gotten over it" <http://www.radiodiaries.org/transcripts/OtherDocs/conrad.html>.

ARRL Regulatory Information Manager Dan Henderson, N1ND, remembered Mills fondly: "I can't remember a time in Amateur Radio when I didn't know Harry. A visit to his shack was always a learning adventure. He could regale you with stories of his own hands-on experiences from spark gap to today's modern equipment. His shop was a veritable wonderland of learning. If you needed work done on your radio, he was the man. Whenever Harry was the speaker at a radio club meeting, the attendance would always swell. You would never know what trinket or treasure he would bring with him. I have frequently said that Harry had forgotten more about radio and electronics than I ever knew. I will miss his knowledge and friendship. He was the best of the best." No memorial services are planned. An online register book is available for those wishing to express condolences <http://www.thosshepherd.com/>.

* Nebraska Ham Couple Killed at Home: Carolyn, N0LAL, and Steven Baily, N0US, were found dead in their home -- located in a rural area just north of Lincoln, Nebraska -- on Sunday, August 9 <http://www.omaha.com/index.php?u_page=2798&u_sid=10403953>. Police believe the deaths occurred after a string of home invasions; a suspect, Brandon Crago, is in custody on suspicion of murder. In a court appearance on August 14, a judge set Crago's bail at $5 million for robbery, use of a weapon to commit a felony and being a felon in possession of a firearm; murder charges are pending <http://www.omaha.com/index.php?u_page=2798&u_sid=10405594>. According to the "Omaha World-Herald," authorities believe Crago, a man with a history of drug abuse, acted alone. The Bailys, who helped found the Ashland Amateur Radio Club (AARC), served as storm spotters and helped out with club events; Steven maintained the club's repeater. Neighbor Linda Graham, KC0IOQ, told the ARRL, "We're going to be lost without Steve. He was our repeater guy. He had just bought a new power supply and ammeter for the repeater." The Bailys have two daughters, Jennifer and Heather, KL2AK. A memorial service is still being planned.

* ARRL Lab Manager to Serve as Technical Session Chair at IEEE EMC Conference: ARRL Lab Manager Ed Hare, W1RFI, will chair a Technical Session at this year's Institute of Electrical and Electronics Engineers (IEEE) International Symposium on Electromagnetic Compatibility (EMC) <http://www.emc2008.org/>. It will be held at the Cobo Center in Detroit, Michigan, August 18-22. Mark Steffka, WW8MS, a member of the ARRL EMC Committee <http://www.arrl.org/announce/reports-2008/july/>, invited Hare to chair the session due to Hare's involvement with a number of international committees on EMC standards. The session, covering the topic of EMC emissions and immunity, will take place on Thursday afternoon, August 21. Hare said he was pleased to receive the invitation: "ARRL has been an active and regular participant in a number of industry EMC committees, ensuring that Amateur Radio is represented and has a seat at the table. I've helped at most of the Symposium events held over the past few years, peer reviewing submitted papers and providing support to the ham radio luncheon that is held there every year." The IEEE EMC Society's Standards Development Committee (SDCom) is also meeting at the event on Monday and Wednesday mornings. Hare serves as the elected Secretary of SDCom. Hare said the event is not just meetings -- "There is a fun part of the event, too. The Motor City Radio Club <http://www.w8mrm.org/> will activate W8MRM August 19-21, giving Amateur Radio a special presence at this industry event. Look for them starting at 1500 UTC on 7.040, 7.240, 14.040 and 14.240 MHz."

* DXCC Yearbook Includes Corrected DXCC Honor Roll: According to DXCC Manager Bill Moore, NC1L, the 2007 Honor Roll list published in the August 2008 issue of QST was inadvertently produced from a "corrupted report feature" in the DXCC software. "Since the DXCC Honor Roll report is too large for a line-by-line review, random samplings [of the list] were checked and many [listings] were found to be okay," Moore said. "It was not until the complete report was published that we found the report had more errors than originally thought. Publishing a simple correction in an upcoming issue of QST is not possible. We have expanded the 2007

DXCC Yearbook to accommodate a complete reprint of the 2007 Honor Roll list. This is something many of you have suggested in previous years. The 2007 Honor Roll list will also be published on the DXCC Web site and this list will be separate from the current 'live' online Honor Roll list. We regret any inconvenience caused by this and we appreciate your patience and understanding." The 2007 DXCC Yearbook is the largest ever, with an additional 16 pages, and features articles about the year's DXing activities, the Clinton B. DeSoto Cup and DXCC Challenge standings. The DXCC Yearbook is mailed free to all ARRL members who have submitted a DXCC application between January 1 and December 31 of the prior year or are current on the DXCC Honor Roll. Copies are also available for $5 plus postage. To get your issue, please send an e-mail to the ARRL DXCC desk <dxcc@arrl.org>.

* Chinese Olympic Special Event Stations On the Air: Special Event stations for the 2008 Beijing Olympic Games began operating on May 18 and are scheduled to continue through September 17 <http://www.bj2008ses.com.cn/>. Five special calls -- representing the five official mascots of the 2008 Beijing Olympic games -- are on the air: BT1OB, BT1OJ, BT1OH, BT1OY and BT1ON. The last letter of the call sign corresponds to the first letter of the name of each mascot -- Beibei (fish), Jingjing (panda), Huanhuan (flame), Yingying (Tibetan antelope) and Nini (swallow). A QSL card <http://www.bj2008ses.com.cn/bt1ox.jpg>, reserved for special use incorporating all five symbols, has also been designed. Zheng Feng, BA4EG, will be the QSL manager for all stations. QSLs can be sent either direct or via the bureau and will begin to be answered in October. A Web site supporting the Special Event stations include an online log search and QSL card received and sent status, as well as other information. An award for contacting each of the five stations on 10-160 meters a minimum of five times (using CW, SSB or RTTY, as well as SWL) is also available. The Games of the XXIX Olympiad began Friday, August 8 and run through Sunday, August 24. -- Thanks to Chris Parker, VE6PKR, and The Daily DX for some information

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.
```

In order to ensure that rec.radio.info contains only appropriate articles, it was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the

bulletins.

In slrn, according to the srln FAQ, the following scoring rule will | allow you to see rec.radio.info-crossposted bulletins, while still | filtering out most SPAM or "Velveeta" crossposted to more than 2 | newsgroups (as such articles usually do not contain a 'Followup-To:' | header): |

Score: -9999 |
Newsgroups: ,.*, |
~Followup-To: . |

More information about kill files may be obtained from Dave Fawthrop's Killfile FAQ at:

http://www.hyphenologist.co.uk/killfile/

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

Another excellent web interface to at least the radio-related Usenet newsgroups is the RadioBanter site:

http://www.radiobanter.com

sponsored by the NewsgroupBanter project:

http://www.newsgroupbanter.com

It, too, supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups and RadioBanter above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.
```

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions

rec.radio.shortwave International broadcasting on the 'HF' bands
rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org> |

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

Amateur Radio Newsline(tm) Report 1619 - August 22, 2008

Amateur Radio Newsline report number 1619 with a release date of Friday, August 22nd, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio faces tropical storm Fay, Georgia's ham community says it won't talk to Russia, a new 2 meter record set as South Africa contacts Reunion Island, hams in Denver are advised how to handle protesters to the Democratic National Convention if they appear on local repeaters and a 17 year old from Kansas receives the Young Ham of the Year Award and more. We take you to Huntsville where the ceremony took place on Amateur Radio Newsline(tm) report number 1619 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HAM RADIO IS READY FOR TROPICAL STORM FAY

Ham radio operators sprang to alert when weather forecasters announced that a tropical storm named Fay would definitely make landfall on the most south-east region of the United States mainland. Amateur Radio Newsline's Bill Pasternak, WA6ITF, has been following Fay's path from our newsroom in Los Angeles:

--

Tropical Storm Fay will likely not become a hurricane, but as this newscast is prepared the storm continues to plod up the Florida peninsula with the possibility of dumping up to 20 inches of rain in some areas. As the storm approached the Florida Keys, several ham radio severe weather alert groups were activated. Among them the famed VoiP Hurricane Watch Net that collected severe weather information from hams in the field like N1YLQ and passed it along to the National Hurricane Center in Miami:

--

Actual net audio. Hear it in the MP3 version of this newscast downloadable at www.arnewsline.org

--

The VoIP net also passed along severe weather alerts issued by the National Weather Service to those listening:

--

Actual net audio. Hear it in the MP3 version of this newscast downloadable at www.arnewsline.org

--

Also activated was the Hurricane Watch Net with its primary operations on 14.325 MHz and back-up operations on 7.268 and 3.950 MHz. It too filed severe weather information back to the National Hurricane Center via the center ham station WX4NHC.

Tropical Storm Fay formed over the weekend of August 16thn in the Atlantic and was blamed for 20 deaths in the Caribbean before hitting Florida's southwest coast. Fay hit the Florida Keys on Monday, August 18th with driving rain sustained winds of about 55 mph. It then veered out over the Gulf of Mexico before heading east across the state the following day. This, on a path that would have taken it over the Atlantic before it again curved westward toward the Florida Georgia coastline.

Since it never reached hurricane status, Fay was more water than wind. There were no reports of major wind damage on Wednesday, August 20th despite flooding in Florida's Brevard County. The storm had stalled there, and was predicted to dump between 10 to 20 inches of rain in the area. The storm flooded streets downed trees and cut power to some 95,000 homes and businesses in South Florida. Fay also spawned at least one tornado that damaged 51 homes in Brevard County, southeast of Orlando. Nine homes that were a total loss.

According to the ARRL, all three of its Florida's Section Managers are working cooperatively as Fay tracks through the state. As we go to air, hams involved in emergency communications and disaster relief remain on high alert.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in the newsroom in Los Angeles.

--

NOAA, the National Oceanographic and Atmospheric Administration, has put out a prediction that Fay my not slide up the East coast as originally thought. NOAA says that the storm could stay inland and cross the Florida peninsula and head out into the panhandle and beyond. We will have an update on Fay and what hams in her path have done in next weeks Amateur Radio Newsline report. (VoIP Net, HWN, ARRL, Other published reports)

**

RADIO IN POLITICS: GEORGIAN NATIONAL HAM RADIO SOCIETY SAYS GEORGIA HAMS NOT CONTACTING RUSSIA

Amateur Radio contacts between Georgia and Russia have ceased. At least that's what the Georgian national ham radio society is claiming as a protest to the military action and occupation of Georgia by Russian troops.

According to information provided by the Southgate News, the President of the National Associations Radioamateurs of Georgia has said that contacts

between Georgian and Russian Amateur Radio stations have ceased. Mamuka Kordzakhia, 4L2M, also asks that all amateur radio societies, who are either members and non-members of the International Amateur Radio Union do the same.

It should be noted that this is a plea coming from a leader of a national ham radio society and not the result of any mandate given by Georgian telecommunications authorities. Neither the governments of Georgia nor Russia have placed any restrictions on hams in either nation during the current conflict.

Its unlikely that the International Amateur Radio Union or its member nations will take any stand on this issue. Historically the IARU has kept its distance from the internal politics of any nation, be it an IARU member or not. (NARG, with follow-up by ARNewsline(tm))

**

RADIO RECORDS: SOUTH AFRICA TO REUNION ISLAND ON 2 METERS

A new radio record is set in the southern hemisphere. ZS2GK and FR5DN have made the first ever 2 meter VHF contact between Reunion Island and South Africa via the South Indian Ocean path. Take a listen:

--

Actual contact audio. Hear it in the MP3 version of this newscast downloadable at www.arnewsline.org

--

At 02:15 South Africa time on August 12th, Glenn Kraut, ZS2GK, heard the FR5DN beacon from Reunion Island. At 03:39 he established a two-way contact with Mondon "Phil" Phillipe, FR5DN on 144.200 MHz SSB. The two also made contact on 144.400 MHz using FM. The signal strength was S5 to S6 with no QSB over the VHF path of 2875 km.

ZS2GK used was 400W on SSB and 200W on FM. At the FR5DN end Phil was running 120 watts on either mode. The two operators also discussed the possibility of trying the contact in the near future on the 70 centimeter band:

--

Actual contact audio. Hear it in the MP3 version of this newscast downloadable at www.arnewsline.org

--

According to the South Africa Radio League this is a new record on 144 MHz. Ironically, it took place on the morning of the maximum of the Perseids meteor shower. More information and the full audio files of the contact available www.astrorun.com/~fr5dn/radio/august2008.html (AS1I, audio from www.astrorun.com fr5dn/radio /)

**

HAM RADIO EVENTS: OLYMPICS COMMEMORATIVE STATION CONTINUES

Members of the Hong Kong Amateur Radio DX Association continue to be active as V-R-2008-O, This, to celebrate the 2008 Beijing Olympics.

Operations will continue until August 31st on 40 through 6 meters using SSB, RTTY and PSK31. QSL direct only to VR2XMT Charlie Ho, PO Box 900, Fanling Post Office, Hong Kong.

Sorry. Nut there is no electronic e-QSL or Logbook to the World filings accepted for this rather special commemorative event. (Hong Kong DXA)

(5 sec pause here)

**

RADIO READY: HAMS IN DENVER ADVISED ON HOW TO HANDLE DNC PROTESTERS

Hams in Denver are being warned to be on the lookout for unlicensed operators. This as the Democratic National Convention comes to town. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

With the Democratic National Convention about to descend on Denver Colorado, ARES District 22 Operations Officer Dan Meyer, N0PUF, has some advice for hams in the area. In a posting to the World Wide Web Meyer says that after reading on some of the web sites set up by protesters coming to the convention, he finds that some say that ham radio is the best way to communicate instead of using FRS or GMRS radios.

Meyer says that Denver area hams need to be ready to T-hunt down any illegal transmissions. He also notes that just about every usable repeater channel pair in the Denver metro area is assigned on some basis. Most as secondary or tertiary frequencies. But if illegal transmissions do appear on Denver area repeaters, the trustees need to be prepared to shut them down.

Meyer also has some advice to T-Hunt teams. He says that if the transmissions are tracked to the Denver downtown area, he would suggest that the T-Hunters do not go there. And if by chance the T-Hunters do spot someone who is operating illegally that they not confront that person, He says that the protesters are likely better prepared for more than you are.

The bottom line. Meyer believes that as soon as the Democratic National Convention is over and everyone leaves town, the rouge operators will go

away as well.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.

--

One suggestion we might make to our friends in the mile-high city if illegal operators do show up on local Denver repeaters. Rather than shutting then down the owners might consider placing them into CTCSS or Digital CTCSS tone access mode. Its very doubtful that political protesters will have the technologic insight needed to program an access tone into an HT or mobile. Especially if that tone is unpublished and unknown.

Also, if you do go tone access during the convention do not use the standard 100 hertz default tone most radios come set to. A protester might inadvertently turn it on by fiddling with the keypad. Instead, use an lesser occupied sub audible tone that will leave the unlicensed protesters scratching their heads as to why they cannot communicate using those wonderful mountaintop relay devices that the properly licensed radio amateurs in Denver can. (KB6CC, ARNewsline(tm), others)

**

RADIO LAW: FCC ANNOUNCES FREE DTV CONVERSION SPEAKERS BUREAU

The Federal Communications Commission has launched a Speakers Bureau. This, for groups throughout the country to request speakers to discuss the upcoming transition to Digital Television at their meetings.

The Commission will provide speakers, without cost, to any group requesting one. To request a speaker, go to the FCC's DTV website, www.dtv.gov, and simply click on the words "Request a Speaker." Or contact Rosemary Kimball
from 9 a.m. to 5 p..m. Eastern time at area code (202) 418-0511. You can also e-mail her a request to Rosemary dot kimball at fcc dot gov.

The FCC says that this new Speakers Bureau is the latest addition to the its Digital Television conversion outreach effort. The big switch to all digital broadcasting is still scheduled to take place on February 17th, 2009. (FCC)

**

ENFORCEMENT NEEDED: RARE RADIO BADGE COLLECTION STOLEN

From the how low can a human being get file comes word that a thief has hit the recent Irish Scout Jamboree. According to a report in the Southgate news, on the last night of the recent scout gathering in Ireland someone made off with the DK8ZM Rare Radio scouting and JOTA Badge collection.

It was not until the last day of the event that the 300 item collection was found to be missing. According to David Hutchinson, GI4FUM, hams working

the Jamboree immediately produced a poster with a photograph of the badge collection. Within a half hour it was distributed to all leaders at the camp.

Unfortunately, the badges are thought to have been removed from the Jamboree site before they were found to be missing from their display area. Police in Ireland are investigating. (Southgate)

**

ENFORCEMENT: TV STATION TO PAY $16,000 HURRICANE CHARLEY CLOSED CAPTIONING

A CBS television affiliate is paying a steep price for not providing enough closed-captioned information during Hurricane Charley. Don Carlson, KQ6FM, has more:

--

In a consent decree brokered by the FCC, WINK-TV in Fort Meyers, Florida, has agreed to pay the government $16,000 to settle a complaint brought by local hearing-impaired viewers.

News Press says that the storm, which hit in August 2004, came ashore along the barrier islands before sweeping across Charlotte County. WINK-TV dropped all its regular programming and was in solid storm coverage in the hours leading up to landfall. The station's team of anchors, reporters and meteorologists supplied a steady stream of information to viewers.

The only problem: Many of the fast-changing details were spoken aloud by the news team, but didn't make it into the more limited written information WINK was providing in its graphics and news tickers along the bottom of the screen. This violates a federal rule protecting the rights of the hearing-impaired.

Soon after Hurricane Charley, the station took steps to add real-time captioning to all its major newscasts. Because of this WINK admitted no fault in the Consent Decree and it ends the FCC investigation into the matter.

--

It should be noted that both the local Fort Meyers NBC and ABC stations were each fined $24,000 in late 2005 for the same lack of comprehensive closed-captioning. Those stations appealed the fines. The managers each say the matter is still pending. (News-Press.com)

**

ENFORCEMENT: TWINS ARRESTED IN CA COPPER THEFT

An update to an ongoing story dealing with the theft of copper wire world wide. Twin brothers and a juvenile have been arrested in connection with a series of just such thefts in California.

An under cover investigation Lancaster Sheriff's Station began after a report was filed by Verizon that $40,000 worth of copper wire had been stolen. The investigation in a sparsely populated area lasted nearly 50 hours. Three suspects were taken into custody who were linked to four thefts of copper wire from Verizon over a two week period.

The suspects reportedly climbed utility poles to cut the wire down and it was taken to recycling facilities where it was sold for between $1.80 and $2.50 a pound. They are also believed to be linked to at least a dozen similar thefts. (Published reports)

**

NAMES IN THE NEWS: VK2RO APPOINTED AS IOTA REP IN REGION 3

The Radio Society of Great Britain which runs the Island Of The Air program has appointed Roger Conway VK2RO as a representative for ITU Region 3. The region includes Australia, New Zealand, Philippines, Indonesia and Islands of the Pacific excluding French and US territories. The same region previously represented by Jim Smith VK9NS. Conway, who is President of Australia's Shepparton and District Radio Club, will be the official check point for IOTA awards for the region. (RSGB)

**

THE SOCIAL SCENE: HAMFAIR IN TOKYO JAPAN AUGUST 23 - 24

Turning to the ham radio social scene, the gigantic Hamfair in Tokyo takes place the weekend of August 23rs and 24th. This gathering is billed as the largest ham radio gathering in the Pacific Rim with an estimated 35,000 to 40,000 active radio amateurs expected to attend over the two days of the event. It is also the place where manufacturers tend to showcase new technologies and gear that's still in development. Some of it that will not be seen on dealer shelves anywhere in the world for years to come. If anything exotic does show up we will let you know about it in future Amateur Radio Newsline reports. (Hamfair Tokyo)

**

THE SOCIAL SCENE: PARIS TEXAS IN OCTOBER

Meantime on this side of the Pacific and a bit inland, the Paris Texas Radio Group will host the 4th Annual Paris Texas Hamfest on October 10th and 11th. The venue is the Coliseum at the Red River Valley Fairgrounds. More information is on line at www.paristexasradio.com/hamfest (Via e-mail)

**

EMERGING TECHNOLOGY: THE 2008 ARRL / TAPR DCC IN CHICAGO IN SEPTEMBER

The joint 2008 ARRL and Tucson Amateur Packet Radio Digital Communications Conference will held in the Chicago area from September 26th to the 28th. The venue is the Elk Grove Village Holiday Inn located near O'Hare airport.

The Digital Communications Conference is billed as the premiere annual digital ham radio meeting covering all aspects of digital communications as applied to ham radio. This includes both voice and data on frequencies ranging from the lowest of the high frequency bands up through the microwaves.

And for the first time, this years conference will feature a D-STAR Friday Night event. Plans are to have the nations leading innovators, pioneers and leaders in D-STAR digital movement at the gathering to answer any and all questions regarding the mode that some believe will likely replace F-M for ham radio utility communications in the years and decades to come.

There will be a free airport to hotel shuttle and easily accessible from major interstate highways. Full information about the 2008 Digital Communications Conference and accommodations is on line atwww.tapr.org/dcc. (WB9QZB, TAPR, Others)

**

SPECIAL EVENT: ROUTE 66 ON THE AIR

The Citrus Belt Amateur Radio Club of San Bernardino, California will host the 9th Annual "Route 66 On The Air" Special Event. The operation includes
18 stations and two rovers operating in and around major cities along the old Route 66 from Santa Monica, California to Chicago, Illinois.

Official station call designations will begin with W6A in Santa Monica and end with the letter assigned to the final operator taking part. The rover stations will be on September 13th from 0001 UTC to 2400 UTC on September 21st. Frequencies will all be on or near those ending in the number 66 using all available modes.

QSL information is on the web at www dot w6jbt dot org. Just click on the words "Route 66 Event." All you need to do is to answer their CQ to get your kicks along Route 66. And if only it were legal to play the music that goes along with those words. (Press release)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: VE3TFD KILLED IN THE LINE OF DUTY

Some sad news to report. A firefighter and ham radio operator has been killed in the line of duty. Bob Leek, VE3TFD, was a 25-year veteran of the Toronto Fire Department and lost his life in the response to a massive

propane depot explosion that occurred Sunday August 10th.

In offering it's Condolences, the Canadian national ham radio society, noted that VE3TFD was a member of Radio Amateurs of Canada, the South Pickering Amateur Radio Club and Durham Amateur Radio Emergency Service. (RAC)

**

EMERGING TECHNOLOGY: STUDY SHOWS FEW KNOW ABOUT HD RADIO

Some amazing and alarming statistics in a decade where digital is the buzzword. A survey by American Media Services says that only about 1 in every 3 American adults say they are somewhat familiar with H D Radio.

AMS says that its survey shows that only 33 percent of respondents have ever listened to an HD Radio broadcast while 67 percent say they have not. Whether that can be read as "only a third" or "already a third " is a
matter of interpretation.

AMS by OmniTel conducted a telephone survey of more than 1,000 adults in March. 65 percent of respondents said that they are not in any way familiar with the digital broadcast radio technology. (RW)

**

EMERGING TECNOLOGY: NEW LASER DEMONSTRATED

A major breakthrough in laser communications technology. Burt Hicks, WB6MQV, has the details:

--

Science Daily reports that applied scientists at Harvard University in collaboration with researchers from Hamamatsu Photonics have demonstrated a new highly directional semiconductor lasers with a much smaller beam divergence than the current crop.

While semiconductor lasers are widely used in everyday products such as optical recording technologies and laser printers, they suffer from poor directionality. Divergent beams from semiconductor lasers are focused or collimated with lenses that typically require meticulous optical alignment leading in some cases bulky optics.

To get around these limitations, the researchers sculpted a metallic structure, dubbed a plasmonic collimator. It consists of an aperture and a periodic pattern of sub-wavelength grooves placed directly on the face of a quantum cascade laser emitting at a wavelength of ten microns. In so doing, the research team was able to dramatically reduce the divergence angle of the beam from a factor of twenty-five degrees down to just a few degrees in the vertical direction. Even with this change the laser maintained a high output optical power and could be used for long range chemical sensing in the atmosphere, including homeland security and environmental monitoring,

without requiring the bulky collimating optics.

For the Amateur Radio Newsline, I'm Burt Hicks in Santa Clarita, California.

--

The innovation is said to open the door to a wide range of applications in photonics and communications. Harvard University has also filed a broad patent on the invention. (Science Daily)

**

HAM RADIO IN SPACE: NASA LEARNING HIGHLIGHTS HAM RADIO

AMSAT's Tom Clark, K3IO, has highlighted what the NASA Digital Learning Network has to say about Amateur Radio. According to his posting on the AMSAT Bulletin Board , the report says that Amateur Radio on the International Space Station frequently provides direct from orbit contact with students in schools around the world. It went on to say that to help prepare the students for an ARISS experience, NASA has generated a series of teaching modules for the students.

The news item notes that the space agency has three different packages available suitable for students in Kindergarten through 4, 5 to 8 and 9 to 12 grade levels.

In all it's a very positive view of ham radio by NASA. More is on-line www.amsat.org/amsat-new/tools/maillist/maillist.php (ANS)

**

WORRLDBEAT - SOUTH AFRICA: HAMS SET UP AMATEUR RADIO STATIONS AT SCHOOLS

As part of this years World Space Week, hams in South Africa have been asked by their national society to set up an amateur radio station at local schools and share the magic of amateur radio with students. The society says that this will give students an opportunity to listen to astronauts sharing his space experiences. Also, there's also the possibility that some kids will get a chance to talk with an astronaut using the ARISS ham radio in space program. (Southgate)

**

ON THE AIR: IARU REGION 1 ATV CONTEST

On the air, the annual IARU Region 1 Amateur Television Contest takes place from 1800 UTC on Saturday September 13th to 1200 UTC on Sunday the 14th. Operation I on all bands from 70 cm and above. Talk-back is most likely to be found on 144.75 FM. The rules of this contest can be found on-line at www.iaru-r1.org/VHF_Handbook_V5_11.pdf (Southgate)

**

ON THE AIR: LIONESS OF ITALY AWARD

The 50th Anniversary Lioness of Italy Award has been announced. This, to celebrate of the anniversary of the Brescia section of the Italian Amateur Radio association.

The award will be issued to all amateurs who make the required number of QSOs. SWL's can also qualify with the proper number of confirmed listener reports. This award qualification period will run from August 24th to September 14th for operation on all Amateur service bands. 10 Brescia stations for contacted or heared are needed by European stations and 5 for DX stations.

Contact confirmation that includes your log extract goes to in electronic forma to IZ2FOSat rbolb dot com. The deadline to enter is October 28th. (Press release)

**

DX

In D-X, Didier Senmartin, F5OGL, the team leader of the upcoming Glorioso DXpedition says that the rumor mongers spreading unauthorized information about the planned operation have no idea what they are talking about. In a world wide Internet posting, F5OGL says that no date is yet fixed for the operation to begin. That said, he is doing all he can to be on the island before the end of this year.

Senmartin notes that all the operators are also personnel of the French Military Defense and they all have professional assignments which have priority over anything that is ham radio related. He goes on to explain that the use of hams in the military is essential to the success of the planned operation. This, because major risks in the zone does not allow for including civilian ham radio operators in the crew.

F5OGL says that he will do all he can to make it as perfect as possible DXpedition to the Glorioso, but adds that safety first is the first goal.

In other DX news, F5NHJ will be operating portable FK from Grande Terre, New Caledonia until August 29th. Activity will be mostly on CW and the digital modes on 30 meters. QSL as directed by the operator

CU6AY stroke P is active from Pico Island through the 4th of September. QSL direct to his home callsign as listed at QRZ dot com.

And IK8VRH portable 5Z4 will be active from Kenya through to the end of August. Operations are on 40, 20 and 17 meters using CW, SSB and RTTY. QSL as directed on the air.

(Above from various DX news sources)

**

THAT FINAL ITEM: KC0PTL RECEIVED YOUNG HAM OF THE YEAR HONORS

And finally this week, we take a drive or a flight to Huntsville Alabama where at last weekends Huntsville Hamfest Emily Stewart, KC0PTL, received honors as 2008 amateur Radio Newsline Young Ham of the Year. Our producer

Bill Pasternak, WA6ITF, was on hand to make the presentation:

--

WA6ITF: "I would like to take this opportunity to present to Emily the 2008 amateur Radio Newsline Young Ham of the Year Award. And it says -- quote -- awarded to Emily M. Stewart, KC0PTL, in recognition of her total dedication to the amateur radio service. Its jointly signed by Amateur Radio Newsline, Vertex-Standard USA and CQ Magazine. -- end quote.

Emily, congratulations. This is yours." (Applause)

--

After Bill presented Emily with the plaque it was time for her to receive some gifts from the awards corporate sponsors. First up was Don Allen, W9CW, from CQ Magazine:

--

W9CW: "We are one of the sponsors of the Young Ham of the Year Award and this year we have for Emily an 8-day program at Spacecamp. In addition to Spacecamp we are also providing some gifts to her from CQ specifically. We have a one year subscription to CQ, a subscription to CQ VHF and also a one year subscription to Poipular Communications magazine." (Applause)

--

Don was quickly follows by Dennis Motschenbacher, K7BV, of Vertex Standard. These are the folks who bring you Yaesu brand ham radio gear and have been an award sponsor since 1986.

--

K7BV: "Yaesu is once again proud to be a principal sponsor of the Young Ham of the Year Award. We are very pleased to have met Emily today for the first time and we have a little something for her. I believe that with the qualification I have seen that she is going to college and who knows where else and we would like her to have an FT-817 portable for HF through VHF and UHF so that you can get on the air no matter where you go. (Applause)

--

Last but by no means least was a new addition to the line-up of gifts for Emily. To go with her new Yaesu transceiver Heil Sound presented her with a microphone and headset to make flea power Dxing a pleasure. And representing Heil Sound was a name long connected with the Young Ham of the Year program -- Chip Margelli, K7JA:

--

K7JA: "To give you a little more talk power, we are going to provide you with a Heil lightweight headset with the HC5 element for your 817. Use it in good health and, again, congratulations.

"We are very proud to be a part of this ceremony and Bill, its always a pleasure."

WA6ITF: "Its good to have you back."

--

And what was Emily's reaction?

--

KC0PTL: "I'm really surprised that I was given all of this stuff and I feelk very, very honored to be here."

--

And we are very honored to have Emily Stewart, KC0PTL, as the Amateur Radio Newsline, 2008, Young Ham of the Year. (ARNewsline(tm))

==> ARRL RESPONDS TO CONCERNS RAISED BY CALIFORNIA REPEATER OWNERS
AFFECTED BY PAVE PAWS

Earlier this week, the ARRL responded to a series of concerns raised by
repeaters owners regarding the ongoing PAVE PAWS interference mitigation
project at Beale Air Force Base near Sacramento, California. In a
lengthy e-mail dated August 20, ARRL Regulatory Information Manager Dan
Henderson, N1ND, addressed a series of concerns raised by Tom Naso,
N6MVT, of Lafayette, California; Naso is owner or trustee to several
involved repeaters.

Naso's letter can be found here
<http://www.arrl.org/news/files/pavepaws_querry_2008aug20.pdf>.
```

Henderson's reply can be found here
<http://www.arrl.org/news/files/pavepaws_response_2008aug20.pdf>.

"Tom raised a series of thoughtful, valid concerns," Henderson stated. "The ARRL's response to his queries, though lengthy, attempts to address them in detail. With Tom's permission, we are releasing both his original e-mail and the ARRL's response in order to get the most accurate and full information out to repeater owners and users as possible. It also gives us the opportunity to make sure a couple of other issues relating to the PAVE PAWS situation that have arisen are brought to the public's attention."

Henderson said that the biggest challenge the ARRL -- and through them the affected repeater owners -- continues to face is "the balance between not being able to know full technical details of the interference and the testing techniques and the desire/need to know information. It's a tough challenge. And while there have been a few errors in identifying call signs (because of errors in databases being used by the Air Force), there were actual measurements made of signals identified by the Air Force testing group."

Henderson pointed out that the ARRL continues to pursue valid concerns that can be based on fact and backed up with solid data that are raised by repeater owners. "We will continue to expect the FCC to perform its responsibilities. If a permanent shut-down order comes from the FCC, we expect that the licensee is given their full rights for due process."

==> ARRL DIRECTOR AND VICE DIRECTOR ELECTIONS SET FOR NOVEMBER

Responding to solicitations in the July and August issues of QST, ARRL members in the Atlantic, Dakota, Delta, Great Lakes and Midwest Divisions have nominated 14 candidates for the ten positions of Director and Vice Director of each of the five divisions. Seven incumbents have been re-elected without opposition, while there will be balloting for Director and Vice Director of the Delta Division and for Vice Director of the Great Lakes Division. Those elected will serve three-year terms beginning at noon on January 1, 2009.

The ARRL Ethics and Elections Committee has reviewed and confirmed the eligibility of all 14 candidates and has declared the following re-elected: Atlantic Division Director Bill Edgar, N3LLR, and Vice Director Tom Abernethy, W3TOM; Dakota Division Director Jay Bellows, K0QB, and Vice Director Greg Widin, K0GW; Midwest Division Director Bruce Frahm, K0BJ, and Vice Director Cliff Ahrens, K0CA; and Great Lakes Division Director Jim Weaver, K8JE. The rules state that if a candidate is running unopposed, he or she shall be declared the winner without balloting. Members in the Great Lakes Division will elect a Vice Director, while Delta Division members will elect a new Director and new Vice Director.

Delta Division Director Henry Leggette, WD4Q, decided not to seek another term. Nominated to succeed him are current Vice Director Karl

Bullock, WA5TMC, and former Louisiana Section Manager Mickey Cox, K5MC. Seeking the post of Vice Director are Ariel Elam, K4AAL, of Tennessee, and Arkansas Section Manager David Norris, K5UZ.

In the Great Lakes Division, incumbent Vice Director Gary Johnston, KI4LA, is being challenged by former Kentucky Section Manager John Meyers, NB4K, and Michigan Section Affiliated Club Coordinator Daniel Romanchik, KB6NU.

The policies of the League are established by 15 Directors who are elected to the Board on a geographical basis to represent their divisions and constituents. These 15 Directors serve three year terms, with five standing for election each year. Vice Directors, who succeed the Director in the event of a mid-term vacancy and serve as Director at any Board meeting the Director is unable to attend, are elected at the same time.

Full members of the ARRL in the Delta and Great Lakes Divisions will be mailed ballots in late September. To receive a ballot you must be a member as of September 10. To be counted, ballots must be returned so as to be received at ARRL HQ no later than noon Eastern Standard Time on Friday, November 21. The count will be conducted on that date under the supervision of three tellers and a certified public accountant.

Absentee ballots are available to those ARRL full members licensed by the FCC but temporarily residing outside of the US. Members overseas who arrange to be listed as full members in an appropriate Division prior to September 10, 2008, will be able to vote this year where elections are being held. Even within the US, full members temporarily living outside the ARRL Division they consider home may have voting privileges by notifying the ARRL Secretary prior to September 10, 2008, giving their current QST address and the reason another Division is considered home.

==> HAMS READY FOR FAY

While Tropical Storm Fay made landfall over Key West, Florida at 3 PM EDT on August 18, Amateur Radio operators throughout Florida were prepared "just in case." As Fay crossed Key West, Florida Emergency Management officials noted that while "Fay is no Hurricane Charley," it is following the same general path as 2004's Charley, a Category 4 hurricane and one of the most destructive hurricanes in recent history for the area; at least 13 people were killed in that storm.

All three of Florida's ARRL Section Managers are working cooperatively as Fay tracks through the state. After sweeping through the Keys, Fay next made landfall in Cape Romano at approximately 4:45 AM on Tuesday, August 19. Landfall on Florida's mainland was initially expected to hit more to the north..

Fay is edging west-northwestward and is about to make its third landfall at Flagler Beach, Florida and then will continue to migrate west-northwestward across northern Florida. The National Weather Service reports that Fay continues to produce torrential downpours and states

flooding is the major concern now. Locations on Florida's eastern coast from Cocoa Beach to Melbourne to Fort Pierce have picked up 8 to 26 inches of rain as of August 21; a report of 26.2 inches of rain has been received near Melbourne, resulting in numerous reports of flooding around the area.

According to Julio Ripoll, WD4R, of WX4NHC <http://www.wx4nhc.org/>, the Amateur Radio Station at the National Hurricane Center (NHC), Fay came close to reaching hurricane strength "several times in her track through Cuba and Florida. The surface reports collected via ham radio continue to be very important, no matter how high or low the wind speed. They fill in gaps between governmental weather stations and give the hurricane forecasters a better idea of the wind field range and local flooding."

Plans are in place for several shelters to be opened and responses ready for issues relating to the flooding. ARRL HQ staff are following events closely and are in contact with members and ARES leaders in the affected areas.

==> NEW TOWER, ANTENNA MODIFICATIONS FOR W1HQ

On August 13, XX Towers installed a new 40 foot tower on top of the ARRL Headquarters building for use at W1HQ, the Laird Campbell Memorial HQ Operators Club. This new tower supports the 3 element SteppIR 20-6 meter Yagi antenna that was moved from the old tower; the antenna was placed on the old tower in November 2007. The antenna also received modifications, allowing operations on 30 and 40 meters. Both the antenna and the 30-40 meter modification kit were donated by Mike Mertel, K7IR, of SteppIR.

According to ARRL Test Engineer Bob Allison, WB1GCM, XX Towers visits the League twice a year to inspect both the W1AW and W1HQ antenna systems: "This past May, XX Towers inspected the tower and found it was approaching poor condition due to its age and harsh environment. The new tower supports our 3 element SteppIR Yagi with a newly installed 40-30 meter Dipole Kit, recently donated by SteppIR Antenna Systems. HQ staff can now enjoy these additional bands and have peace of mind with the new tower."

ARRL Contest Branch Manager Sean Kutzko, KX9X, president of the W1HQ club, said, "I am pleased to report that the W1HQ tower replacement and installation of the 40-30 meter dipole element on the SteppIR antenna was successful. HQ hams may now enjoy a rotating dipole for these bands at the push of a button on the SteppIR controller. The crew from XX Towers did a fine job; thanks to his regular inspections, we were able to avoid a more costly removal of the 50 foot, 35 year old tower. ARRL Building Manager Greg Kwasowski, W1GJK, assisted with and arranged for the roofing company to remove part of the roof for the tower base and replacement after tower installation. ARRL Lab Manager Ed Hare, W1RFI, saved the day with the needed metric hardware. Many thanks to all involved for the successful replacement of the tower. Having a rotatable

dipole on 30 and 40 meters is a very welcome addition to the station."

W1HQ provides ARRL employees who do not have an amateur station of their own a place to get on the air. "I'm thrilled to have this station here," said Kutzko. "I live in an apartment and can't put up antennas outside at home. W1HQ gives me a way to chase DX and be active in contests on both HF and VHF."

W1HQ boasts an IC-756PROIII for HF work and an IC-746PRO for 6 and 2 meters, recently donated by ICOM. Bob Heil, K9EID, of Heil Sound donated two new Pro Set 4 mic/headsets, a PR781 Proline microphone and a topless boom to the station. Nemal Electronics Inc and Times Microwave Systems jointly donated two 500 foot rolls of LMR-400.

==> REUNION ISLAND, SOUTH AFRICA CONNECT ON 2 METERS

On Thursday, August 14, Phil Mondon, FR5DN, on Reunion Island had a successful QSO with Glen Kraut, ZS2GK, in South Africa on 2 meters <http://www.astrorun.com/%7Efr5dn/radio/tropo/14aout2008/zs2gk_14august2008.html>. According to Dave Pedersen, N7BHC, this contact is "very likely the longest 2 meter QSO via tropospheric propagation for either country."

The 2008 ARRL Handbook <http://www.arrl.org/catalog/?item=1018> defines tropospheric propagation as "radio waves [that] are refracted by natural gradients in the index of refraction of air with altitude, due to changes in temperature, humidity and pressure. Refraction under standard atmospheric conditions extends the radio horizon somewhat beyond the visual line of sight. Favorable weather conditions further enhance normal tropospheric refraction, lengthening the useful VHF and UHF range by several hundred kilometers and increasing signal strength. Higher frequencies are more sensitive to refraction, so its effects may be observed in the microwave bands before they are apparent at lower frequencies."

"Ducting takes place when refraction is so great that radio waves are bent back to the surface of the Earth. When tropospheric ducting conditions exist over a wide geographic area, signals may remain very strong over distances of 1500 km (930 miles) or more. Ducting results from the gradient created by a sharp increase in temperature with altitude, quite the opposite of normal atmospheric conditions. A simultaneous drop in humidity contributes to increased refractivity. Useful temperature inversions form between 250 and 2000 meters (800-6500 feet) above ground. The elevated inversion and the Earth's surface act something like the boundaries of a natural open-ended waveguide. Radio waves of the right frequency range caught inside the duct will be propagated for long distances with relatively low losses. Several common weather conditions can create temperature inversions."

Kraut said that on the evening of August 13, he "went to bed at about 08:30 UTC leaving the rig on and antennas pointing toward Reunion. I woke up at 00:15 UTC and heard the beacon from my shack. I went over and

saw that signals were low, even with the Masthead pre-amp on. I was running CWGeT to confirm hard copy of the signal, but it was not decoding. I switched off the pre-amp and returned to bed. About an hour later, I heard the beacon again but much stronger, so I went to the shack and saw the signal at almost 1 on the S-meter. Perfect hard copy from CWGeT. I contacted Phil on his cell phone, switched the linear and pre-amp on and we logged an SSB QSO and FM QSO on 144.200 and 144.400 at 01:39 UTC on August 14 with signal reports of 5/6 both ways."

Mondon added: "At 0135 UTC on August 14, Glenn is calling me on my cell phone. That means the beacon is heard strong enough to allow a QSO. It's 0535 local time here; I speak low and run into the shack, switch off the beacon and call on 144.200 to see Glenn's signal at 55/56 with the preamp. We decide to try FM and I have clear copy on him. Time goes fast -- we stop the QSO some 20 or 30 minutes later, but the band was still nicely open! The signal was crystal clear, almost no fading, if any on my side. Whooaaaa! The first bridge is now there between South Africa and Reunion Island."

Pedersen said that trans-oceanic ducting has long been suspected around South Africa: "While operating there as ZR2BI in the late 1970s, I heard an unidentified South American station on 2 meters. Since then, having moved to the US, I was not able to pursue it any further. This last January, I started e-mailing a lot of people in Southern Africa and St Helena, but found little activity pursuing the potential tropo. Resorting to my old ways of using FM broadcast stations as beacons, I asked John Turner on St Helena Island to listen for African stations. Within days, he reported stations from Angola, then Namibia and eventually as far south as Cape Town. One February day, he logged 25 South African FM broadcasters in 30 minutes. And that was with his car radio."

Pedersen said that Ian Coverdale, ZD8I, on Ascension reported that he can occasionally hear Cape Town Harbor radio on 156 MHz, 2770 miles away; Sted Stroud, ZD8S, reported that it is fairly commonplace for Ascension Islanders to listen to Brazilian FM stations. "All those reports led to Phil Mondon putting up the beacon," Pedersen said.

According to VHF guru and conductor of QST's "World Above 50 MHz" column Gene Zimmerman, W3ZZ, VHF amateurs have long been aware of long distance tropospheric ducting across stable ocean waters. "The best known such duct is the Hawaiian duct which links the West Coast of the US, especially California with the Big Island of Hawaii. But we have also known that other such ducts exist in different places around the world, although the ham populations in these areas are often so low that we hardly ever experience two way communications. The Indian Ocean is one such place. This outstanding contact between Phil Mondon, FR5DN, on Reunion Island and Glen Kraut, ZS2GK, in South Africa confirms the existence of a path between the mainland and islands in the Indian Ocean. It follows the detection of FM broadcast stations on similar paths in the South Atlantic Ocean between the island of St Helena and

Angola, Namibia and Cape Town on the mainland, and reports of reception of Brazilian FM stations on Ascension Island in the South Atlantic."

Pedersen agreed: "Now that the path is proven, many South African hams are gearing up to increase the distance over the coming southern summer."

==> NEW SECTION MANAGERS TO TAKE OFFICE OCTOBER 1

On August 19, members of the ARRL's Membership and Volunteer Programs Department counted ballots for contested Section Manager races in Idaho and Western New York. Section Managers serve two year terms.

In Idaho, Edward Stuckey, AI7H, of Post Falls, was elected Section Manager of Idaho with 155 votes; Chuck Robertson, KX7ID, of Nampa, received 150 votes. Stuckey will be stepping into the office that has been held by Doug Rich, W7DVR, of Boise, since the fall of 2003; Rich decided not to run for another term of office. Stuckey, licensed since 1957, is a member of ARES/RACES organizations. He is currently active in the Kootenai Amateur Radio Society in Coeur d'Alene of which he is a past president.

In Western New York, current Section Manager Scott Bauer, W2LC, of Baldwinsville, was re-elected with 639 votes; challenger Kevin Romer, KC2MLC, of Trumansburg, received 273 votes. Bauer has served as Western New York Section Manager since 2000. He is active in many areas of Amateur Radio including the National Traffic System, ARES and SKYWARN, and serves as a volunteer examiner.

The ARRL North Dakota Section will also get a new Section Manager come October 1. Lynn Nelson, W0CQ, of Minot, will be taking over from Kent Olson, KA0LDG. Olson, who has served as Section Manager since 2001, did not run for another term of office.

The following incumbent ARRL Section Managers did not face opposition and were declared elected for the next two year terms of office beginning October 1, 2008: Betsey Doane, K1EIC (Connecticut); Skip Jackson, KS0J (Minnesota); Joe Phillips, K8QOE (Ohio); John Thomason, WB5SYT (Oklahoma); Roberto Jimenez, KP4AC (Puerto Rico); Sherri Brower, W4STB (Southern Florida), and John Ellis, NP2B (Virgin Islands).

Lee Anne Allen, WY7DTW, of Devils Tower, has been appointed Section Manager of the Wyoming Section to complete the term of office that has been held by Chris Pritchard, WX7B, of Green River. Pritchard is moving out of the Section to take a new job. The present term of office continues through March 31, 2009. Dave Patton, NN1N, Manager of the Membership and Volunteer Programs Department, made the Section Manager appointment effective August 15 in consultation with Rocky Mountain Division Director Brian Mileshosky, N5ZGT. Allen has been the Assistant Section Manager for Wyoming since the first of the year; she also serves as a local ARRL Emergency Coordinator. Allen served as the Wyoming Public Information Coordinator (PIC) for almost three years until earlier this year.

==>SOLAR UPDATE

Tad "I carry the Sun in a golden cup" Cook, K7RA, this week reports: Another week of quiet Sun, but on Wednesday and Thursday -- August 20-21 -- a new spot seemed to be emerging, but there is no sign that it is anything other than an old Solar Cycle 23 spot. Sunspot numbers for August 14-20 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 65.9, 65.3, 66.2, 66.5, 66.2, 67.3 and 65.9 with a mean of 66.2. Estimated planetary A indices were 5, 4, 5, 7, 23, 8 and 6 with a mean of 8.3. Estimated mid-latitude A indices were 4, 3, 4, 5, 15, 7 and 5 with a mean of 6.1. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by William Butler Yeats' "Those Dancing Days Are Gone."

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint is August 22. The Hawaii QSO Party and Ohio QSO Party are August 23-24. The SKCC Sprint is August 27. Next weekend is the NCCC Sprint on August 29. The ALARA Contest, the SCC RTTY Championship and the YO DX HF Contest are all August 30-31. The SARL HF CW Contest is August 31 and the MI QRP Labor Day CW Sprint is September 1-2. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, August 24, 2008 for these online course sessions beginning on Friday, September 5, 2008: Technician License Course (EC-010); Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact

the Continuing Education Program Coordinator <cce@arrl.org>.

* No ARRL Audio News August 29: There will be no ARRL Audio News on Friday, August 29; ARRL Audio News will resume production on Friday, September 5. The ARRL Letter will be distributed as usual.

* Amateur Radio Exams, Licensing Return to Bangladesh: Since 2004, Amateur Radio operators in Bangladesh have not been able to get an Amateur Radio license or sit for an examination. But thanks to the efforts of the Bangladesh Amateur Radio League (BARL) <http://www.barl.org/> -- that country's IARU Member-Society -- the Bangladeshi government will once again issue ham licenses; exams will also be given on a monthly basis beginning August 13, 2008. On July 21, representatives from BARL -- Belayet Robin, S21RB; Zahid Shipon, S21VA, and Saiful Huda, S21SH -- met with members of the Bangladesh Telecommunication Regulatory Commission (BTRC) in what Robin called "a very fruitful meeting <http://www.btrc.gov.bd/>. BARL had finally been able to make the concerned authorities understand the significance of ham operators in a country with frequent natural disasters like floods and cyclones." The Bangladeshi government has only allowed ham radio operations since 1991, though amateurs have received special permission on a case-by-case basis to set up Emergency Communications infrastructures during natural disasters such as cyclones, tidal waves and flooding. BARL was formed in 1979 as a way to promote Amateur Radio, but on-air operations were banned due to the political climate of the region. BARL will offer a class to prepare for the exam. Exams will be computer based with 35 multiple choice questions. In order to receive an Amateur Radio license, examinees must achieve 18 correct answers. Examinees are given one hour to complete the test.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly
from ARRL HQ. To subscribe, unsubscribe or change your address for
e-mail delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the
"Member Data Page" link (in the Members Only box). Click on "Modify
membership data," check or uncheck the appropriate boxes and/or change
your e-mail address if necessary. (Check "Temporarily disable all
automatically sent email" to temporarily stop all e-mail deliveries.)
Then, click on "Submit modification" to make selections effective.
(NOTE: HQ staff members cannot change your e-mail delivery address. You
must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will
be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur
Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this
listserver.)

895. Re: New to Ham Radio

Newsgroup: rec.radio.amateur.moderated
Date: 2008-08-25 15:34:28 UTC
From: Doug Smith W9WI <w9wi@invalid.nospam>
Message-ID: <pan.2008.08.25.15.18.38.834590@invalid.nospam>
Source record: 2466

Yikes, that's jumping in with all four feet(grin)! Welcome to amateur
radio!

IMHO the deletion of the Morse requirement was a positive development, bu
t
I would strongly recommend you consider *voluntarily* learning Morse.
It's a good deal of fun - and it will make DXing a LOT easier with a
modest station. There's quite a bit of computer software out there to
assist in the process.

Amateur Radio Newsline(tm) Report 1620 - August 27, 2008

Amateur Radio Newsline report number 1620 with a release date of Friday, August 29th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio returns to Bangladesh, Canada adopts a new High Frequency ham radio bandplan, U-S hams prepare for Hurricane Gustav, repeater site rental fees go up in Australia and ham radio helps to honor an aviation pioneer. Find out who on Amateur Radio Newsline(tm) report number 1620 coming your way right now.

RADIO NEWS: HAM RADIO RETURNS TO BANGLADESH

Ham radio is returning to Bangladesh after an several years absence. This with word that the amateur radio license issuing authority in Bangladesh has begun issuing licenses once again. Marilyn Syme, VK3DMS, has the details:

--

Good news from S21 Land , Bangladesh.

Since 2004, amateur radio license issuing authority in Bangladesh had stopped taking examinations and issuing licenses to the enthusiast.

After continuous lobbying for the last four years, members of the Bangladesh Amateur Radio League - BARL had finally been able to make the concerned authorities understand the significance of Ham Operators in a country with frequent natural disasters like floods and cyclones.

As part of the latest development, the BTRC has decided to resume the process of issuing Amateur Radio Licenses and take examinations regularly every month.

Good news is hardly heard from anywhere and it is more welcome when it comes from a country like Bangladesh and even more appreciable when it is for a hobby like the Amateur Radio.

I'm Marilyn, VK3DMS

--

To assist with the re-introduction of ham radio, the Bangladesh Amateur Radio League is offering classes to prepare for the exam, which will be

computer based with 35 multiple choice questions. In order to receive a Bangladesh amateur radio license, examinees must achieve 18 correct answers. One hour will be given to complete the test. (WIA News, BTRC)

**

THE CHANGING OF THE GUARD: POPULAR COMMUNICATION SENIOR EDITOR TOM KNEITEL. W4XAA - SK

I'm Bill Pasternak, WA6ITF.

The changing of the guard continues. This, with the sad news that radio monitoring icon Tom Kneitel, W4XAA, the former K2AES, has passed away at age 75.

Kneitel was Senior Editor as well as the founding Editor of Popular Communications magazine which is now published by CQ. His association with CQ began when he became the founding editor of S9, a CB magazine started by Cowan Publishing. When S9 ceased publication, Kneitel and current CQ Publisher Dick Ross, K2MGA, launched Popular Communications.

Tom Kneitel was the grandson of animation pioneer Max Fleischer and son of animator Seymour Kneitel. But W4XAA preferred the print media, writing for Popular Electronics and Electronics Illustrated in the 1950s and '60s. And it was during his tenure at Popular Electronics that he started the registered shortwave monitor program, which issued unofficial "WPE" callsigns to active SWL's.

Tom Kneitel had been in poor health for some time and died in Florida on August 22nd. He is survived by his wife of 54 years, Judy, two sons, five daughters and ten grandchildren. Memorial services will be private.

Jim

RESTRUCTURING: CANADA ADOPTS NEW HF BANDPLAN

Canada will soon have a new plan for the High Frequency bands that gives recognition and spectrum to every current and legacy mode while making sure future technologies are accommodated.

According to a news release from Radio Amateurs of Canada, the High Frequency band plan presently in use in Canada was adopted in 1996. Since then, many changes have happened in the Amateur radio world and other nations band plans have been revised and modified.

Recognizing the need for change, just under two years ago, Radio Amateurs of Canada had asked Bob Nash, VE3KZ, to re-activate the national societies HF Band Planning Committee. This, with a goal to review and modernize the Canadian HF Band Plan.

The committee headed by Nash worked very hard in studying and consulting all across Canada to eventually come up with a band plan that was proposed to the Board of Directors of Radio Amateurs of Canada. Unlike the Regulation by Bandwidth approach being considered in the United States, the new Canadian plan retains a structure based on separation by mode and interest.

The R-A-C Board has now adopted this plan and had it posted to the organizations website. You can see the way in which Canada has divvied up the H-F spectrum for its hams www.rac.ca/service/bandplans/hfband_e.php (RAC)

**

RADIO LAW: NSW AUSTRALIA PROPOSES SITE FEE INCREASE FOR HAM REPEATERS

Australia's New South Whales Department of Lands has announced a Communications Facility Site Licensing proposal which may force some amateur radio clubs to shut down repeaters located on government controlled land, or face huge increases in site license fees. The Wireless Institute of Australia says that the fees could cause public service communications to be cut back. Phil Waite, VK2DKN, of the WIA News has the details:

--

The scheme will require the operator of a "Telecommunications Facility" including an amateur radio communications facility (all site users including Primary Users and third-parties) to pay the Department of Lands a yearly license fee for the use of each site. An amateur radio facility will be charged $367 Australian per year and CPI indexed and subject to 5 yearly review which is the minimum amount prescribed under the NSW Crown Lands act.

The WIA has reviewed the License Agreement which appears to have been drafted in a form primarily suitable for large commercial telecommunications and media organizations, and we are concerned that the agreement does not adequately address the needs or reflect the current arrangements in place for community amateur radio clubs.

In particular, the WIA believes the indicated charges and fees may severely disadvantage affected amateur radio clubs to the point where they will no longer be able to provide and maintain their repeater and beacon facilities.

The WIA is also concerned that, in cases where the amateur radio equipment is located in the facilities of a Primary User, under the terms of the agreement the Primary User is able to impose an additional fee on third-party occupiers. As third-party occupiers are already paying license fees directly to the Dep't, in effect, an amateur radio club could end up paying twice.

The WIA has written to the NSW Department of Lands calling for a formal review of the proposed arrangements based on the fact that amateur radio clubs are not telecommunications services, but rather are not-for-profit organizations providing valuable voluntary community service. The WIA

believes that amateur radio clubs should have the choice of being excluded from the scheme.

Phil Waite VK2DKN

--

There is one bright side to all of this. Some clubs, especially those with only one repeater, may find the proposal to their advantage. This is because it does provide 20 year secure tenure for occupation of the radio relay site. (WIA News)

HAM TECHNOLOGY: WINMOR TO BE UNVEILED AT THE DCC

Meantime, back in the United States, something new will be unveiled at the upcoming joint Tucson Amateur Packet Radio and ARRL Digital Communications Conference that could end part of the ongoing controversy over Winlink 2000. The biggest complaint being that the mode requires a special, high priced proprietary modem. Now, that's about to change thanks to a new digital protocol called WINMOR.

According to information supplied by Mark Thompson, WB9QZB, WINMOR, is a digital protocol designed by Rick Muething, KN6KB for use in the High Frequency ham bands within the Winlink 2000 network. It is implemented through a Windows application that uses a computer sound card for all the analog-to-digital and digital to analog conversions. And while still in the final development stage it reportedly provides error-free transfers within 200, 500 or 2000 Hertz bandwidths.

A demonstration of WINMOR is slated for the Digital Communications Conference in Chicago to be held September 26th to the 28th. Its public release is still a few months away. If it proves out as most believe it will, WINMOR holds the potential of putting high speed digital messaging on the high frequency bands into the hands many radio amateurs who have been hesitant to purchase a dedicated Pactor 3 modem. (WB9QZB)

RADIO RULES: ARRL RESPONDS TO CONCERNS RAISED BY CALIFORNIA REPEATER OWNERS AFFECTED BY PAVE PAWS

The ARRL responded to a series of concerns raised by repeaters owners in California regarding the ongoing PAVE PAWS interference mitigation project

at Beale Air Force Base near Sacramento. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

In a lengthy e-mail dated August 20, ARRL Regulatory Information Manager Dan Henderson, N1ND, addressed a series of concerns raised by Tom Naso, N6MVT who is the owner or trustee to several of the involved repeaters in the Pave Paws interference mitigation issue.

Henderon says that Naso has raised a series of thoughtful, valid concerns. He says that the biggest challenge the ARRL -- and through them the affected repeater owners -- continues to face is the balance between not being able to know full technical details of the interference and the testing techniques and the desire/need to know information.

Henderson says that this is a tough challenge. And while there have been a few errors in identifying call signs -- mainly because of errors in databases being used by the Air Force -- there were actual measurements made of signals identified by the Air Force testing group.

Henderson pointed out that the ARRL continues to pursue valid concerns that can be based on fact and backed up with solid data that are raised by repeater owners. He says that the League will continue to expect the FCC to perform its responsibilities. He also says that if ever a permanent shut-down order comes from the FCC, that the ARRL expects that the licensee is given their full rights for due process.

For the Amateur Radio Newsline, I'm Bruce Tennent, K6PZW, in Los Angeles.

--

The ARRL's response to Naso's queries, though lengthy, attempts to address them in detail. Naso gave the ARRL permission to reprint his letter along with the ARRL response to it. Naso's letter can be found at http://www.arrl.org/news/files/pavepaws_querry_2008aug20.pdf while Dan Henderson's reply can be found on line at http://www.arrl.org/news/files/pavepaws_response_2008aug20.pdf (ARRL)

RESCUE RADIO: REGION 2 PREPARE FOR HURRICANE GUSTAV

As Hurricane Gustav made it way across the Caribbean, a Notice to all radio amateurs in IARU Region 2 has been issued. The notice requested that IARU Region 2 member societies remind their members to be aware of emergency communications that may occur because of the storm and to keep those frequencies clear for emergency traffic.

This message did not indicate any particular frequencies that may be used for this purpose, however certain frequencies used for tropical storm tacking are well known. This includes the Hurricane Watch Net on 14. 325 MHz. It also uses 7.268 MHz and 3.950 MHz when propagation is lost on 20 meters.

WX4NHC at the National Hurricane Center in Miami, activated its High Frequency and Voice over Internet Protocol operations in anticipation of Gustav on August 26th. It monitors the Hurricane Watch Net and has requested that both land based as well as maritime mobile stations in the areas affected by Hurricane Gustav radio in weather and damage reports.

Also in operation will be other severe weather and storm relief networks that normally utilize 7.045, 7.080 and 7.110 MHz dayside and 3.740 MHz at night. If you hear emergency traffic on those frequencies please steer clear of using them unless you are directly involved in net operations.

More on Hurricane Gustav and ham radios response to it, next week. (IARU, Southgate, others)

**

RESCUE RADIO: DATE CHANGE FOR FCC PANDEMIC COMMUNICATIONS SUMMIT

The Federal Communications Commission's Public Safety and Homeland Security
Bureau has announced that it has changed the date for its summit on Pandemic Preparedness.

The meeting titled Enhancing Communications Response for Health Care and First Responders will now take place on Thursday, September 18, from 9:00 a.m. to 1:15 p.m. Eastern time. The venue is the Commission Meeting Room TW-C305 in Washington D.C..

As previously reported, this important summit will focus on communications and coordination between the health care sector, first responders, government and the communications industry in preparation for a pandemic. The panel discussions will also highlight ways that communications may be expanded and enhanced in response to a pandemic and how the communications industry will serve an instrumental role in such a response.

The Commission had initially scheduled the Summit for September 16th. (FCC)

**

NEWSLINE FOLLOW-UP: NO PIRATE PROTESTERS ON THE HAM BANDS AT THE DNC

If there were any protesters trying to use ham radio to coordinate their attempts to disrupt the Democratic National Convention in Denver, nobody in the area heard them.

As reported last week, Denver ARES District 22 Operations Officer Dan Meyer, N0PUF, had posted a web notice that some websites set up by protesters coming to the convention had suggested protesters use ham radio rather than FRS, GMRS or CB to communicate. Meyer had said that Denver area hams needed to be ready to T-hunt down any illegal transmissions.

But preliminary reports indicate that the protesters never bothered to read their own websites when it comes to talking to advice on talking to one another by radio. About the only R-F exposure they have gotten has been on

the various television news reports and that's been minimal at best.

A we go to air there have been no reports of protesters tying up any VHF frequency nor trying to communicate with other protesters over any Denver area repeater. Most suspect that they are likely using cellphones to communicate although there is no way to know for certain.

Upcoming this week is the Republican National Convention in the twin cities of Minneapolis and St. Paul, Minnesota. It will be interesting to see if any protesters take to the ham bands there. (ARNewsline(tm) from listener input)

**

NEWSLINE FOLLOW-UP: FCC MAY BAN 700 MHZ WIRELESS MICS

A follow-up to our recent story regarding a public interest group challenging the sale and use of wireless microphones in the high UHF television spectrum. The Federal Communications Commission is proposing a ban on certain types of wireless microphones and has begun an investigation into how the industry markets its products. Bill Pasternak, WA6ITF, is in our studio with more:

--

As previously reported here on Amateur Radio Newsline, a coalition of consumer groups alleged in a complaint last month that users wireless microphones are unwittingly violating FCC rules that require licenses for the devices. In its filing, the Public Interest Spectrum Coalition accused manufacturers of deceptive advertising in how they market and sell the microphones, which largely operate in the same radio spectrum as broadcast television stations.

The FCC, in a notice released Thursday, August 21st, , said its enforcement bureau had opened an investigation regarding the charges. The agency also is proposing that the sale and manufacture of some of the devices be banned.

The FCC says that wireless microphones that operate in the same frequency bands as UHF broadcast television stations are intended for use in TV, film and stage production and should not be in the hands of the general public. Most owners of the microphones are unaware that FCC rules require them to obtain a license for their use.

The FCC rarely enforces the licensing requirements on the microphones . This is because there have been so few complaints and because in theory these wireless mics are programmed to avoid any interference to operational television channels in a given geographic area.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

UHF television channels 52 through 69 are currently used by broadcasters. They will be vacated on February 17, 2009 with the

nationwide conversion to all digital broadcasting. The government sold that section of airwaves for $19 billion in the FCC's most successful auction in history. The concern is that microphones operating in that range may cause interference for the new licensees. (FCC, ARNewsline(tm))

**

REGULATORY: FCC VANITY CALL FEE GOING UP ON SEPT 25

The cost of getting a vanity ham radio call sign is going up. According to a bulletin from the American Radio Relay League, on August 11th, the Federal Communications Commission announced that the cost of an Amateur Radio vanity call sign will increase 60 cents to $12.30.

The League quotes a notice in the August 26th Federal Register was entitled "Assessment and Collection of Regulatory Fees for Fiscal Year 2008.," It includes regulatory fees the government is expected to recover at a total of $312,000,000, that encompass all the services the FCC regulates.

Now that notice has been published in the Federal Register, the increase will take effect in 30 days, on September 25th. (ARRL)

**

RESCUE RADIO: ORANGE COUNTY CA RECALLS BADGES

Orange County, California's citizens including radio amateurs who serve in the Sheriff's Department's Professional Services Civilian Responder volunteer corps have been asked to return their honorary badges. This after newly selected Sheriff Sandra Hutchens said that the badges could fool people into believing the volunteers are sworn deputies.

The move comes more than a year after a July 2007 opinion issued by the states Attorney General. It says a sheriff's gift of an honorary badge to a private citizen violates California law. This, if the badge falsely purports to be authorized, or if it would deceive an ordinary, reasonable person into believing that it is authorized for use by a peace officer.

The volunteer's badges have a six-point star with a circle around it identifying the holder as a Professional Services Civilian Responder. The regular sheriff's badge is a six-point star without a circle around it. (Published news reports)

RADIO NEWS: NEW KFI AM TOWER FINALLY UP

The new tower for Los Angeles radio station KFI is finally up. The need for a replacement dates to the 2004 the collapse of the original 750-foot tower. This, in after it was struck by a small plane piloted by a local ham. Both the pilot and his passenger will killed in the mishap.

Work on a replacement started earlier this year but the partially built tower then fell when a guy wire support gave way. The now completed tower

took 13 days to construct.

KFI operates on 640 kHz and is owned by Clear Channel Communications. (RW)

NAMES IN THE NEWS: DAVID BOOTH, KC6WFS - SANTA CLARITA CA RED CROSS HOMETOWN HERO

Some names in the news. First up is Dave Booth, KC6WFS, of Santa Clarita, California. He's being honored as a Red Cross Honors Hometown Hero for his valiant attempt to save a man who had suffered a heart attack and was lying in the street.

Booth was riding his bike in August 2007 when he came upon the scene. Without hesitation, KC6WFS began giving the victim Cardiopulmonary Resuscitation and continued doing so until the Paramedics arrived.

Unfortunately, not every story of heroism has a happy ending. Sadly, this is one of those cases. While KC6WFS tried his best to bring a stranger with no pulse back to life, the man did not survive. But as Tim Barbour who nominated Booth for the award noted, there were other people on the scene, but none of them knew CPR or did anything to help the dying man. Only KC6WFS tried to help him to survive.

Dave Booth, KC6WFS, will receive his Red Cross Honors Hometown Hero recognition at special breakfast on Tuesday, September 11th. CBS 2 Television newscaster Rick Chambers will be the Master of Ceremonies. The Hometown Heroes Recognition Breakfast celebrates the values and principles of the American Red Cross by recognizing people in California's Santa Clarita Valley, who have taken action in a time of crisis to help others, and who consistently show an extraordinary gift for human compassion. (ARNewsline(tm))

**

NAMES IN THE NEWS: NEW RADIO PROGRAMMING VIDEO FROM KN4AQ

If you own a D-Star radio and are having a problem entering your call into it, film maker Gary Pearce, KN4AQ, says help has arrived. Gary has produced and posted a short video with details of programming call signs in D-Star radios. The video which is in two parts is posted to Gary's YouTube channel at www dot youtube dot com slash KN4AQ. Its also at Gary's business website at www.arvidnews.com/dstar-programming. (D-Star Reflector)

EMERGING TECHNOLOGY: INTELLIGENT RADIO ROADSIDE HELP ACROSS EUROPE

Europe has allocated a broadcast frequency to a new Roadside Safety information system. This, in an effort to combat road accidents and traffic jams.

According to news reports, the European Union's Intelligent Car Initiative program has dedicated a single radio frequency to smart vehicle communication systems. The system is based on a wireless communication technology and allows cars to "talk" to each other, to warn of slippery conditions or accidents.

The system relies on a single Europe-wide frequency band that is 30 MHz wide in the 5.9 GHz band. It will be introduced over the next six months and will not hinder existing roadside services. (RW)

**

EMERGING TECHNOLOGY": NEW CENTRINO 2 FROM INTEL

Intel has released a new series of chips for laptop computers that it says promises longer battery life and better graphics rendering. The new Centrino 2 platform is made up of a processor, related integrated circuits and wireless communications chip. Intel says that used together it will bring a 30 percent savings in power over the previous generation chipset. Power consumption is an area where Intel has an advantage over its competitors because it has moved faster to a manufacturing process that lowers the energy use and the cost of manufacturing its IC's. (Intel)

**

HAM RADIO IN SPACE: AMSAT SYMPOSIUM CALLS FR PAPERS

In ham radio space related news, a second call has gone out for papers to be presented at the upcoming 2008 AMSAT Space Symposium and Annual Meeting. The dates for this event are October 24th to the 26th in Atlanta, Georgia.

Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to the amateur satellite program. An emphasis for this year is an educational outreach to middle and high school students. Another topic if interest is using amateur satellite tracking systems to monitor deep space network objects.

Camera ready copy on paper or in electronic form will be due by September 1st for inclusion in the printed symposium proceedings. Abstracts and papers should be sent to n8fgv at amsat dot org (AMSAT - NA)

**

WORLDBEAT - UK: BECOME A UK HAM AT THE RSGB HIGH FREQUENCY CONVENTION

Planning a trip overseas this fall? Well if your destination is the United Kingdom in October its also a chance to take the that nations ham radio

tests.

The RSGB is offering those wishing to obtain a UK Amateur Radio License the opportunity to complete one, or more, of the required examinations over the weekend of the HF Convention. That's the 10th to the 12th of October.

Candidates must book their examinations prior to the event and must provide evidence they have completed the required practical assessments, although limited facilities to complete assessments can be arranged at the at the show. Contact information is provided in this weeks printed Newsline report.

The contact for further information and for booking examinations is John James, john.james at rsgb dot org dot uk, or via the RSGB HQ switchboard on 01234 832700. Candidates for the Foundation & Intermediate Exams must contact Brian Reay, G8OSN, by email to ardc dot chairman at rsgb dot org dot uk so that their progress on practical assessments can be verified. If required, Brian can also advise on finding a local tutor to complete practical assessments in advance of the High Frequency Convention or the provision of exam facilities at the show. (GB2RS)

**

WORLDBEAT SOUTH AFRICA: CHASING MAIDENS - A NEW SA FUN AWARD

South Africa's Sandton Amateur Radio Club has announced that it is sponsoring a new Worked all South African Grid Squares Chasing Maidens award as of the 1st of August. The "Maidens" referred to are Maidenhead grid locators and the aim of this contest is to make contact with a station located in each of the 83 grid squares that comprise South Africa. More information is on-line at www.zs6stn.org.za/zswags. You can also send an email to zswags at gmail dot com to receive a copy of the rules. (SARL)

**

THE CONTEST FILE: CQ WW 160 METER PHONE CONTEST DATE CHANGED.

In radiosports news, word that the dates for the 2009 CQ WW 160 Meter Phone Contest has been postponed by a week. This, to avoid conflict with the ARRL DX CW Contest. The 2009 CQWW 160 Meter Phone Contest will now take place between February 27th and March 1st, 2009. (CQ)

**

DX

In DX, 3F5RBB, will be active portable 3A from Monaco between August 31st and September 10th. Listen out for him on 40, 20, 15 and10 meters. QSL to his home callsign.

And IN3VZE will once again be active holiday style from the southwest shore of Lake Malawi. This, between August 29th and September 11th. His callsign will be 7Q7CE, and he will be on all bands using SSB and the

Digital modes. QSL card is "OK" via the bureau or direct to his home call address.

Lastly, DL1BKK and DL1BKI are celebrating 40 years of marriage on a holiday style DXpedition as 8Q7KK from Kuramathi in the Maldive Islands. This, between August 29th and September 17th. Heir activity will be holiday style using an Icom IC-7000 into wire antennas. QSL to DL1BKK, direct or via the bureau. There's no electronic QSLing for this one. (From various DX news sources)

**

THAT FINAL ITEM: EARHART FESTIVAL FEATURES HAM RADIO

And finally this week, ham radio was part of an event that honored an early United States aviation pioneer. This, as Earhart International Festival took place the weekend of August 16th and 17th in Derry, Ireland. Again, here is WIA reporter Marilyn Syme, VK3DMS:

--

Scores of radio amateurs across three continents, from Russia to the USA, linked up to send good wishes for the Festival - they even made contact with an American businessman who was flying his personal jet some 42,000 feet above the country park.

Keeping with the spirit of Amelia Earhart was the awe-inspiring flypast from Letter-kenny Flying Club, whose five-plane formation thrilled the crowds. Then international radio link ups by the Foyle and District Amateur Radio Club in the Earhart Cottage.

The Director of the Earhart International Festival has paid tribute to the thousands who defied the weather to enjoy the wonderful community atmosphere and top-quality entertainment on offer at Ballyarnett Country Park at the weekend. I'm VK3DMS

--

The Earhart International Festival is dedicated to its namesake Amelia Earhart. She was an American aviation pioneer and noted author who gained world-wide fame for her flying exploits in the early 20th century. In 1937, during an attempt to circumnavigate the globe, Earhart and her navigator Fred Noonan disappeared over the central Pacific not far from Howland Island. While there has been speculation as to their fate over the years, to date no conclusive evidence has surfaced to prove any theory other than that the pair ran out of fuel and crashed at sea. (WIA, Derry Journal)

==> GULF COAST PREPARES FOR GUSTAV

As of Friday, although Tropical Storm Gustav is still several days away from landfall on the US mainland, disaster preparations are being rolled out along the Gulf Coast. ARRL Leadership Officials, with the support of the ARRL Headquarters staff, are taking measures that will facilitate emergency communications among ham volunteers, among hams and served agencies such as the Red Cross, and among Leadership Officials during the expected emergency and in its aftermath. ARRL Section Managers in the Gulf Coast states of Florida, Alabama, Mississippi, Louisiana and Texas are marshaling resources and setting up procedures that will take effect as the storm approaches the mainland.

Support from the ARRL Headquarters staff includes referrals from local and national media, shipment of Amateur Radio equipment via the Ham Aid program, Section Manager liaison and referral of inquiries from Amateur Radio operators. Two special Web sites are available for Amateur Radio operators looking for information and volunteer opportunities: <http://www.arrl.org/gustav/> and <http://www.arrl.org/gustav/vol.html>. In addition, news will be updated on the ARRL Web site over the weekend and early next week, as Gustav moves toward the Gulf Coast.

On Thursday, as Gustav was slamming into Haiti and heading toward Jamaica, WX4NHC, the Amateur Radio station at the National Hurricane Center in Miami, activated at 12 PM EDT (1600Z). The NHC requested all land based stations as well as ships at sea in the areas affected to send them weather data (measured or estimated) and damage reports.

A post to their Web site stated: "If you are in the affected area and normally monitor on a local Net on VHF, 40 or 80 meters, we would appreciate your checking into the HWN NET or EchoLink/IRLP Net once per hour to receive the latest Hurricane Advisories and to report your local conditions. Please do not venture outside during the hurricane to gather weather data."

In addition, the VoIP Hurricane Net activated Thursday at 11 AM EDT (1500Z), according to a post by Jim Palmer, KB1KQW, VoIP-WX Net Scheduler.

Also on Thursday, FEMA posted a news release that said, in part: "The Department of Homeland Security's Federal Emergency Management Agency (FEMA) is coordinating plans and preparatory activities of numerous federal agencies in close communication with state, tribal and local officials as Tropical Storm Gustav threatens to return to hurricane strength prior to impacting Gulf Coast states. All residents in the region are encouraged to make personal preparations. Information is available at www.Ready.gov on how families and individuals can best prepare before the storm.

"FEMA and its federal partners are in close communications with states along its potential path in order to review plans, pre-station assets and personnel, and respond to any request for assistance. FEMA's work with states using a Gap Analysis tool to determine in advance of storms where federal assistance is most likely to be needed has helped federal and state agencies to develop pre-scripted mission assignments and other contingency plans to help improve response and recovery efforts."

The news release also provides details on preparations now underway by several other agencies, including the American Red Cross and the Army Corps of Engineers.

Louisiana Governor Bobby Jindal declared a state of emergency for his state on Wednesday, and he activated 3000 National Guard troops, with more on call. The state of Mississippi declared a state of emergency on Thursday. Governor Haley Barbour stated, in part: "I urge all Mississippians to please take this storm seriously. One of the most

important lessons we learned after Hurricane Katrina was that there is no substitute for awareness and self-help, especially in the days before the hurricane is predicted to hit."

==> THE SEPTEMBER/OCTOBER QEX IS HERE

The September/October issue of QEX is out, and it is full of theoretical and practical technical articles that you don't want to miss.

In this issue, Mark Spencer, WA8SME, describes a VLF receiver system that automatically logs received signal data so we can learn about some propagation conditions such as sudden ionospheric disturbances during Solar Cycle 24 in "SID: Study Cycle 24, Don't Just Use It." Phil Anderson, W0XI, gives us a detailed analysis of crystal set receiver circuitry in "A Great Teacher: The Crystal Set." Bertrand Zauhar, VE2ZAZ, brings us another great project that goes well beyond a simple battery charger with his "Rechargeable Battery Cycler."

Jim Kocsis, WA9PYH, presents "Press-n-Peel Circuit Boards," a simple, reliable way to make your own circuit boards using Techniks, Inc Press-n-Peel Blue etch-resist material. Henry J. Rech offers some thoughts about, "Receiver Performance Measurement and Front End Selectivity," and Frank Witt, AI1H, describes "Optimum Lossy Broadband Matching Networks for Resonant Antennas," in this reprint of an April 1990 "RF Design" article.

Would you like to write for QEX? It pays $50 per printed page. Be sure to check out the Authors Guide <http://www.arrl.org/qex/#aguide> for more information. If you prefer postal mail, please send a business-size self-addressed, stamped envelope to QEX Authors Guide, c/o Maty Weinberg, ARRL, 225 Main St, Newington, CT 06111-1494.

QEX is edited by Larry Wolfgang, WR1B, and is published six times a year. The subscription rate for ARRL members in the US is $24. For First Class US delivery, the rate is $37 for members, $49 for nonmembers. For international delivery via air mail, including Canada, the subscription rate is $31 for members, $43 for nonmembers. Subscribe to QEX today <http://www.arrl.org/qex>.

==> CHECK OUT THE SEPTEMBER/OCTOBER NCJ

NCJ, The National Contest Journal is what everyone interested in radiosport needs to have in their shack. Filled with the latest news from the contesting world, NCJ is the voice of radiosport. Whether you are new to contesting or are a seasoned pro (or somewhere in the middle), you will find something in NCJ just for you.

In the September/October issue, Stan Stockton, K5GO and Bob Wilson, N6TV, provide a dialogue on "CW Skimmer: Point/Counterpoint." To go along with this article, Pete Smith, N4ZR, talks about "So You Want to Skim? Practical Issues in Deploying CW Skimmer in a Contesting Environment." Eric Scace, K3NA, writes about "Distributing Receiving Antennas" in the first of a multi-part article. If you're a top-bander,

you don't want to miss "A Simple 2-Element Vertical Array for 160 Meters" by John Barcroft, K6AM.

Dennis McAlpine, K2SX, takes a look at "The Wacky World of State QSO Parties," while Jon Platt, W0ZQ/m gives his take on "One Rover's View on Propagation during the 2008 Minnesota QSO Party." Bill Santelmann, N1AU, remembers his son in "A Tribute to my Son, Stuart, KC1F." Stu, a founding member and past president of the Yankee Clipper Contest Club, became a Silent Key in May of this year. ARRL News Editor S. Khrystyne Keane, K1SFA, lets NCJ readers take a sneak peak at the October issue of QST in "October is Radiosport Month in QST."

Of course, there are all the regular columns and features you expect from NCJ: "Workshop Chronicles," by Don Daso, K4ZA; "Contest Tips, Tricks & Techniques," by Gary Sutcliffe, W9XT; "Propagation," by Carl Luetzelschwab, K9LA; "VHF-UHF Contesting," by Jon Jones, N0JK; "Contesting on a Budget," by Paul Schaffenberger, K5AF; "DX Contest Activity Announcements," by Bill Feidt, NG3K; "RTTY Contesting," by Don Hill, AA5AU; "Contesting 101," by Kirk Pickering, K4RO, and "Contest Calendar," by Bruce Horn, WA7BNM.

All this and more in the September/October issue of NCJ. NCJ is published six times a year by the ARRL; it is edited by Al Dewey, K0AD. Subscribe today <http://www.arrl.org/ncj/>!

==> "THE DOCTOR IS IN" THE ARRL LETTER

This week, ARRL Letter readers are in luck! The ARRL's very own Doctor, author of the popular QST column "The Doctor Is IN," answers a question from his mailbag:

Question -- John Hoffman, KJ4GER, of Woodstock, Georgia, asks: I am reading the "ARRL General Class License Manual" <http://www.arrl.org/catalog/?item=9965>. In a few places, it mentions the 75 meter band. On my ARRL-provided "US Amateur Radio Bands" chart, it shows an 80 meter band and a 60 meter band, but no 75 meter band. What is the 75 meter band, and why does it not show up on the official band chart?

The Doctor Answers -- John, 75 meters is an designation for the 3.6-4.0 MHz phone band, a portion of the 3.5-4.0 MHz 80 meter allocation. If you convert 4.0 MHz to wavelength (300/4) you will find that the top end of the band has a wavelength of 75 meters.

Historically, 75 meters refers to the voice portion of the "official" 80 meter band. The term 80 meters is often used to refer to the entire band. Most HF radios have a bandswitch position for 80 meters that covers the entire band, not one for 75 meters. Unlike any other band, you will rarely hear anyone refer to "80 meter phone." I cannot offer any logical explanation for the anomaly -- perhaps someone will fill us in on how this came to be.

If you know the answer to this question, send an e-mail to the Doctor <doctor@arrl.org>. Do you have a question or a problem? Send your questions via e-mail <doctor@arrl.org> or to "The Doctor," ARRL, 225 Main St, Newington, CT 06111 (no phone calls, please). Look for "The Doctor Is IN" every month in QST, the official journal of the ARRL.

==>SOLAR UPDATE
Tad "Heat and haze of crimson sunsets" Cook, K7RA, this week reports: Our Sun is still very quiet, but last week's bulletin mentioned a new sunspot emerging on August 21-22. Spaceweather.com showed the sunspot number on those days as 11, which is the smallest non-zero sunspot number. If we don't see any sunspots this weekend, Sunday will mark 42 consecutive days with no sunspots. This will also bring the 3-month moving average for daily sunspot numbers (that we present monthly) clear down to 1.76, the lowest on this side of cycle 23. This would be the three month average centered on July.

The forecast for the next week is a planetary A index of 5 on every day, indicating more of the same quiet and stable geomagnetic conditions. The prediction for September 5 is a planetary A index of 18, probably from a recurring coronal hole and associated solar wind.

Geophysical Institute Prague predicts quiet conditions August 29 to September 3, and quiet to unsettled September 4.

Sunspot numbers for August 21 through 27 were 0, 0, 0, 0, 0, 0, and 0 with a mean of 0. 10.7 cm flux was 67.1, 67.6, 67.9, 67.1, 66.6, 66.9, and 66.6 with a mean of 67.1. Estimated planetary A indices were 4, 4, 2, 4, 2, 3 and 3 with a mean of 3.1. Estimated mid-latitude A indices were 4, 2, 2, 2, 1, 1 and 2 with a mean of 2.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Elizabeth Maua Taylor's "August."

==>IN BRIEF:

* This Weekend on the Radio: This weekend, the NCCC Sprint on August 29. The ALARA Contest, the SCC RTTY Championship and the YO DX HF Contest are all August 30-31. The SARL HF CW Contest is August 31 and the MI QRP Labor Day CW Sprint is September 1-2. Next weekend is the International G3ZQS Memorial Straight Key Contest on September 5-7. On September 6, be sure to look for the Russian RTTY WW Contest, the NCCC Sprint, the Wake-Up! QRP Sprint and the AGCW Straight Key Party. The All Asian DX Contest (Phone), the RSGB SSB Field Day and the IARU Region 1 Field Day (SSB) are September 6-7. The North American Sprint (CW) and the DARC 10 Meter Digital Contest are September 7. The Tennessee QSO Party is September 7-8. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest

Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, September 7, 2008 for these online course sessions beginning on Friday, September 19, 2008: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003R2); Antenna Modeling (EC-004); HF Digital Communications (EC-005); VHF/UHF -- Life Beyond the Repeater (EC-008), and Radio Frequency Propagation (EC-011). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL HQ to Close for Labor Day September 1: ARRL Headquarters will be closed Monday, September 1. Headquarters will reopen at 8 AM Tuesday, September 2. We wish everyone a safe and enjoyable holiday weekend.

* No ARRL Audio News August 29: There will be no ARRL Audio News today, Friday, August 29; ARRL Audio News will resume production on Friday, September 5.

* ARRL Emergency Communications Level 3 Online Course to be Revised: New enrollments in the online Level 3 course will be suspended effective October 1 to allow us to update the course curricula. We expect the updated course to be available in the first quarter of 2009.

* New HF Digital Protocol to Debut at September Conference: WINMOR, an HF digital protocol designed for use with the Winlink 2000 network, will be unveiled at the upcoming ARRL/TAPR Digital Communications Conference in Chicago September 26-28.

* FCC Vanity Call Sign Fees to Increase September 25: The FCC will increase the vanity call sign fee from $11.70 to $12.30, effective September 25, 2008.

* Hobby radio author Tom Kneitel, W4XAA, SK: Tom Kneitel, W4XAA (ex-K2AES), died August 22 at age 75. He was a prolific author of articles and books on monitoring, CB radio and building electronics

projects.

* ARRL and Citizen Corps Assist Schools with NOAA Emergency Radios: ARRL and Citizen Corps are teaming up to offer assistance to local school districts in setting up and registering their NOAA Weather All Hazard Public Alert Radio.

* ARRL Applies for Expansion of 500-kHz Experimental License: On August 22, the ARRL applied to the FCC for expansion of the 500-kHz experimental license WD2XSH. If approved, this application will raise the total number of stations from 20 to 40. This will provide greater geographic coverage, including Alaska and Hawaii, and will provide more opportunities for ground-wave testing. Also included are requests for an expanded frequency band (495-510 kHz) and portable operation within 50 km. The current four modulation modes (CW, PSK-31, FSK-31, and MSK-31) are included. -- Fritz Raab, W1FR

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including

delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline" Report 1621 - September 5, 2008

Amateur Radio Newsline report number 1621 with a release date of Friday, September 5th, 2008 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hams face the wrath of hurricane Gustav as they make ready for more Atlantic storms. Also, Australia to get new radio frequency allocation table and a major DXpedition invites young hams to join in on the fun. Find out the details on Amateur Radio Newsline" report number 1621 coming your way right now.

RESCUE RADIO: HAMS RESPOND TO THE THREAT OF HURRICANE GUSTAV

Ham radio operators were ready as hurricane Gustav made landfall along the Louisiana coast on Monday, September 1st. Don Wilbanks, AE5DW, lives in Piccyune Mississippi and works in New Orleans. He picks up the story from here:

--

Hurricane Gustav slammed into the heart of Louisiana's fishing and oil industry with 115 mph winds delivering only a glancing blow to the city of New Orleans. 60 hours earlier, Mayor Ray Nagin had ordered that New Orleans be evacuated for fear that Gustav would bring the kind of catastrophic flooding brought by Katrina three years ago. Thankfully, that did not happen.

That's not to say that the area escaped unscathed. According to news reports, 2 non-federal levees in Plaquemines Parish just south east of New Orleans were on the verge of collapse as engineers, local law enforcement, parish employees and even prison trustees worked to fortify them. In New Orleans the newly completed Army Corps of Engineers flood gates and pumps in the 17th St. Canal and London Avenue Canal were used in their first real test. They worked flawlessly as a squall line caused the water to rise in those canals putting pressure on the repaired floodwalls that failed during Hurricane Katrina.

Across the region, roofs were torn from homes, trees toppled and roads flooded. More than 1 million customers were without power or minimal telephone service. In many areas, cellular telephone service was non existent. And it was here that ham radio operators were on the front

line. Hams like Joe Glorioso, N5OZG, who is a paramedic in New Orleans:

--

N5OZG: "We still got winds. Maybe 40 to 50 MPH winds. We still have some gusts. If I had to take a guess, maybe 50 to 60 MPH. There are a lot of powerlines down A few trees down. A lot of fences down. But overall it looks very well as compared to Katrina."

--

Glorioso's report was one of many that were relayed using the facilities of the Voice Over Internet Protocol Weather Net. The net had numerous EchoLink and IRLP nodes on line from across the affected area along with several stations from outside of the hurricane zone. Together they provided critical information to forecasters at the National Hurricane Center in Miami:

--
Unknown ham: I just want to report that I'm in Jones County, just about 90 miles Asouth of Jackson (MS). Thing are going pretty good here. We've gotten reports of 40 MPH gusts so far and sustained around 18 MPH and maybe over an inch of rain. No major flooding here as of now."

--

Stations on the net filed reports of sustained measured winds of 100 MPH in Houma, Louisiana before the ham radio spotters lost their wind instrumentation. Reports out of New Orleans indicated several wind gusts 101 MPH. The first reports of a levee break in Scarsdale, Louisiana was reported by N5OZG. He also reported the good news when the situation was stabilized by a sandbagging efforts.

But the Voice Over Internet Protocol Weather Net was not the only ham radio communications effort that had been made ready for the arrival of Hurricane Gustav. Long before the VoIP operation began, hams had been tracking Gustav as it spun across the Caribbean and slammed into Cuba before turning toward the United States Gulf Coast.

The High Frequency Hurricane Watch Net activated at 1900 U-T-C on Sunday, August 31st. Its initial job was to establish a list of available reporting stations along the northern Gulf Of Mexico shores. Its primary frequency was 14.325 MHz upper sideband with additional activation on 7.268 MHz lower sideband during the storm. It was then used to communicate with station WX4NHXC at the National Hurricane Center in Miami. One of the jobs of both the HF and VoIP nets was to funnel requests for severe weather reports to the ham community:

--

KD1CY: "Looking for any reports across south-east Louisiana or southern Mississippi of strong winds, wind damage. Measurements or estimates on winds would be helpful along with any river or stream urban or coastal flooding. This is KD1CY"

--

And hams across the area answered the call. They provided reports of wind speed, precipitation and water levels on rivers and lakes where it was feared that they might overflow:

--

Unknown ham: "the latest river state: the last one I gave you was right at 4 point 0. Its now risen to 4.5 on the river here at Biousara in Mobile county, Fairland, Alabama.

--

Another job of the nets was to deliver bulletins from the National Weather Service to those listening in. Jim Sellars, N0UAM was the net control on the VoIP net when this advisory was issued:

--
N0UAM read the National Weather Service release. (Not transcribed for newscast)

--

But these were not the only two groups taking to the air as Gustav approached. Others lending their support and expertise included the West Gulf Emergency Health and Welfare Net, the Water Way Net and the Maritime Mobile Network. And the Southeastern D-Star Weather Net put its members on alert as well. This net held forth on D-Star reflector 002A. All stations on the D-Star network were asked to monitor and to provide assistance if needed.

The work of ham radio operators with regard to Hurricane Gustav is not yet complete. The storm left a lot of damage in its wake and that includes some communications outages as well as the need for ongoing damage assessment. These are both areas that are certain to include networks set up by radio amateurs. .

And its not over yet. As Gustav diminished into a tropical storm and headed inland, the various nets turned their attention to Hurricanes Hanna and Ike. They were also monitoring the progress of Tropical Depression Ten, now Tropical Storm Josephine as this story is being filed. The members of these ham radio networks are well aware that at this time of year more hurricanes and severe weather is developing out in the South Atlantic, and at least some of it will be heading their way.

For my home 60 miles north east of New Orleans in Picayune, Mississippi, I'm Don Wilbanks, AE5DW, reporting for the Amateur Radio Newsline.

--

Julio Ripoll, WD4R, is the Assistant Coordinator for WX4NHC. He said that the incoming information provided by hams was very critical to operations at the National Hurricane Center and to WX4NHC as well.

**

RESCUE RADIO: HAM RADIO MAKES READY FOR HURRICANE HANNA

Ham radio is already involved in the watch of Hurricane Hanna. That storm is expected to hit somewhere along the South-East U-S coastline in coming days. And already, members of the Hurricane Watch Net have Hanna in their sights:

--

Unidentified ham: "At 5 PM AST which is the same as Eastern Daylight time Hanna continues to linger over the south-eastern Bahamas. A hurricane warning is in effect for the Bahamas and the Turks and Caicos Islands."

--

As we go to air the Hurricane Watch Net is not yet fully activated for hurricane Hanna. You can keep up with the ham radio tracking of Hanna and other tropical storms at the networks website. Its in cyberspace at www.hwn.org. (HWN)

**

RECUE RADIO: JARL OFFERS TO HOST GAREC 2009

Japan Amateur Radio League has offered to host the fifth Global Amateur Radio Emergency Communications Conference. GAREC-2009, will likely take place in Tokyo next spring in conjunction with the famed JARL Ham Fair. More information on this important rescue radio gathering as soon as its released. (IARU)

RESTRUCTURING: AUSTRALIA TO GET NEW FREQUENCY ALLOCATION PLAN

The Australian Communications and Media Authority has released a draft of new Australian Radio Frequency Plan for comment. Geoff Atkinson VK3AFA reports:

--

The Australian Communications and Media Authority has released a draft of a new Spectrum Plan for public comment. When completed, the new Spectrum Plan is intended to replace the current Spectrum Plan developed in January 2005.

Go to the ACMA web page to "read all about it", but in brief proposed changes to the plan will provide: Protection of space research activities while allowing the use of new high data-rate meteorology satellite

services; Upgrade of the radiolocation service to primary and allocating additional spectrum to the existing space research activities; Sharing between the mobile-satellite service and space research services and between the mobile-satellite service and mobile service; Improvements to the satellite coordination and notification procedures; Spectrum harmonization between space services and future terrestrial services. Sharing arrangements between the fixed service and satellite systems using highly inclined orbits; and Spectrum compatibility between the radio astronomy service and the active space services.

--

The proposed changes are scheduled to take effect on January 1st 2009. (WIA News)

**

RADIO POLITICS: IARU REGION 2 MEETS IN PANAMA CITY

Region 2 of the International Amateur Radio Union has issued a report on the recent Executive Committee meeting held in Panama City on August 30th and 31st. The main emphasis of the gathering was to emphasize the importance of having active member societies as being the only way to insure the future of amateur radio. To this end, the support of Area Directors was requested in order to establish local links at area and country level to work with recently designated Coordinators.

The participation of the International Amateur Radio Union in the International Telecommunications Union as well as CITEL and CTU was also discussed. The CTU has requested the support of the IARU in order to have active Member Societies in its region. This, ever since it became aware of the importance of radio amateurs in emergency situations.

The importance of creating an accurate list of Emergency Networks in Region 2 as soon as possible was talked about. This list is being developed by the new EMCOR organization in conjunction with Dr. Cï¿½sar Pï¿½o Santos, HR2P,
and with the support of Member Societies.

Under new projects, within the next few months a Spanish version of a manual for beginners in the hobby will be made available in digital form. This, for easy distribution and to serve as an introductory study guide for all those interested in becoming new radio amateurs.

IARU Region 2 will also begin preparations to participate in the Telecom Amï¿½ricas 2010 event. It will be held in Buenos Aires, Argentina in March of 2010. (Adapted from IARU Region 2 Release)

**

RADIO POLITICS: IARU REGION 3 MEETS IN JAPAN

The Directors of Region 3 of the International Amateur Radio Union met in Tokyo. Japan from 20th to the 22nd. The gathering was hosted by the

Japan Amateur Radio League. Amateur Radio Newsline's Bruce Tennant, K6PZW, tells us what was discussed:

--

The Directors of I-A-R-U Region 3 are Chairman Michael Owen, VK3KI, and members JE1MUI, ZL2AZ, VU2GMN and HL1AQQ. Also attending was IARU Vice President Tim Ellam, VE6SH.

First up was the future. The next World Radiocommunications Conference will be held in 2011 and has agenda items that may directly and indirectly affect the amateur services. The IARU Region 3 Directors said that they recognized the importance of ensuring that those involved in the preparation for that Conference at a regional and national level are kept fully informed.

In the area of emergency communications, the Region 3 Directors again decided to urge member societies to approach their administrations to remove any national regulations that inhibited amateurs from either meeting emergency communication needs or practicing to meet such needs. At the same time the Directors congratulated the Chinese Radio Sports Association on the outstanding contribution of the Chinese radio amateurs. This, in support of the humanitarian response to the tragic earthquake in May 2008.

The Directors also carefully considered an interference complaint report from VU2UR. He's the Regional Monitoring System Coordinator and his report dealt with the broadcasts from shortwave station the Sound of Hope in Taiwan on amateur bands. The Directors will urge member societies to approach their administrations requesting that they object to the Taiwanese administration about these breaches of the Radio Regulations.

Those are the meeting highlights. I'm Bruce Tennant, K6PZW, in Los Angeles.

--

In closing the meeting Chairman Owen acknowledged the time and contributions made by all Directors since their last meeting in August of 2007. He said that it is important that all amateurs recognize the importance of the work of the IARU in protecting their operating privileges. (IARU Region 3 News Release, WIA News)

BREAKING DX NEWS: BANGLADESH TO SPONSOR IOTA OPERATION THIS WINTER

Hot on the tail of last weeks announcement that ham radio is returning to Bangladesh comes word of the first organized DX operation. According to the Ohio Penn DX Newsletter, S21RC and possibly 3 other operators are preparing a DXpedition to St. Martin's Island located in Chittagong Region Group for this coming December.

St. Martin's is a small island in the northeast part of the Bay of Bengal, about 9 km south of the tip of the Cox's Bazar-Teknaf peninsula, and forming the southernmost part of Bangladesh. It is also the only coral

island in Bangladesh.

The exact dates for the operation are not yet confirmed but they plan to stay 6 days on the island. A special callsign is pending and will be announced at a later date. For more details and information on you can how to help get this and other ham radio activities back up and running in Bangladesh, please visit eb7dx dot com on the World Wide Web. (OPDX)

**

RADIO HUMNANITERIANISM: A DXPEDITION TO FIGHT CANCER

A team of German operators will be trying to raise money for a children's cancer charity during their forthcoming DXpedition to Montenegro. DL3NER, DG5NGJ, DG5NGI, DL9MB, DG8NGI and DK9NCX will be active portable 4O between September 25th and October 4th.

The team says that it undertook the operation to help fund Station Regenbogen which is a German care and support center for children suffering from cancer and for their families. On the air activity is planned for 160 through 2 meters using CW, SSB, RTTY and PSK31.

QSL's go to each operator via his home callsign. Information on supporting the operators cancer fighting mission is at www dot qrz dot com slash callsign slash DK9NCX. (Southgate)

**

ENFORCEMENT: FCC WARNS UNLICENSD FLORIDA BROADCASTER TO GET OFF THE AIR

A Florida resident could face FCC sanctions if he permits an unlicensed transmitter to continue operating from his property. Bill Pasternak, WA6ITF, reports:

--

The FCC's Miami Office has warned the owner of property where an unlicensed transmitter is believed to have be located to take it off the air. That, or face severe consequences.

In its July 16th letter to R. Bryce Gray, Jr. the FCC says that it has received information that an unlicensed broadcast radio station on a frequency of 101.9 MHz was allegedly operating from his property in the Oakland Park area. The FCC says that back on March 4th, 14th And June 3rd that agents from the its office confirmed by direction finding that radio signals on frequency 101.9 MHz were emanating from an antenna mounted on a pole at Gray's legal residence.

The FCC has warned Gray that operation of radio transmitting equipment without a valid radio station authorization constitutes a violation of Federal laws and could subject the operator to severe penalties, including seizure of the offending radio equipment, and/or criminal sanctions including time behind prison bars.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

Gray was ordered to cease operations immediately. He was also given 10 days from the date of the FCC notice to respond to the agency with any evidence that he has written authority to operate granted by the FCC. Those dates are now past. (FCC)

**

BREAK 2

This is ham radio news for todays radio amateur. From the down-under in Auckland, New Zealand and United States of America, this is the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

YOUNG HAMS: VK9WDX INVITING YOUNG HAMS ON WILLIS ISLAND OPERATION

The sponsors of the upcoming VK9DWX operation is inviting two young hams who have a passion for DXing and contesting to take part in their operation from Willis Island in October. The VK9DWX crew say that they will pay for all expenses of the young hams selected to join them except the cost of the flight to and from Cairns, Queensland, Australia.

Anyone planning to apply to go on this operation must have experience in working DX pile-ups. The dates that the young Dxers will be invited to take part in the operation are staggered. One will be there from October 6th October to the 19th and the other from October 15th to the 28th.

To qualify, you must be between 18 and 29, hold a valid amateur radio license in the country where you live. If you fit this profile you need to send an e-mail to contact (at) vk9dwx (dot) de. In it, you need to include a minimum 500 words essay written in English. In it, describe how you got started in ham radio, who your Elmer was and why you believe you should be selected for this DXpedition opportunity. Also be sure to include your full name, call sign, home address and any other pertinent contact information.

Again, send this information to contact(at) vk9dwx (dot) de. Those selected will be notified directly by the VK9WDX crew. (DJ0QN)

**

YOUNG HAMS: KB1OGL NAMED CQ MAGAZINE YOUTH EDITOR

And a young name in the news. This with news that 14 year old Brittany Decker, KB1OGL, has been named Youth Editor of CQ Amateur Radio magazine.

Decker is from of Hudson, New Hampshire. She is a General Class licensee and already holds an amateur radio leadership position as Assistant Section Manager for Youth in the ARRL New Hampshire Section.

KB1OGL came to CD's attention when she wrote an article titled "Saving the Hobby for KG7HF." This was about her introduction to amateur radio, that appeared in the April, 2008, issue of CQ. Another Decker article titled "A Rookie's Guide to Contesting," will be published in the October issue.

CD's youth column is scheduled to debut this December and will appear quarterly. Stories by or about young hams should be e-mailed to Brittany at kb1ogl at cq dash amateur dash radio dot com or sent by the U.S. Postal Service to her at CQ magazine, 25 Newbridge Rd., Hicksville, NY 11801 (CQ)

THE SOCIAL SCENE: SHELBY'S MOVE TO GASTON COUNTY A SUCCESS

The 2008 Shelby Hamfest is being called a huge success. According to the Cleveland County Star newspaper more than 1,000 amateur radio enthusiasts were already gathered at Gaston County Park in Dallas County, North Carolina on Thursday, August 21st, even though the shows opening was still 48 hours away.

Celebrating 52 years the Shelby Hamfest usually hosts between 8,000 to 12,000 attendees annually. It is one of the largest hamfest in the United States, and certainly one of the largest in the Southeast. The show had moved to the Gaston County Fairgrounds earlier this year after it became apparent that no compromise could be reached with the management of its longtime home in Cleveland County. Many Shelby businesses have come to rely on income from the annual ham radio gathering and some are dismayed at the way in which the city handled the negotiations that lead the Shelby Amateur Radio Club to move the hamfest away .

Meantime, the Cleveland County Star reported that people started arriving at the park as early as Sunday, August 24th and that the heavy rain has not dampened their enthusiasm to be a part of this annual ham radio event. The Star quotes Hamfest Chairman Robbie Hamrick. WA4RH, as saying that festivities began Friday night with a free bluegrass concert in downtown Dallas.

The Hamfest itself opened on Saturday morning August 30th Hamrick used the opportunity of his newspaper interview to pass along his clubs gratitude for use of the Gaston county facility He told the newspaper that the sponsors appreciate Gaston County letting them use it and make it their new home.

As to the views of those who attended. A sampling of posts on several websites and blogs all seem to be very positive. Almost everyone seemed to be saying it was a good crowd, a good hamfest and that the Shelby Amateur Radio Club should not change a thing. (Cleveland County Star, others)

THE SOCIAL SCENE: ONTARIO VHF ASSN ON SEPT 27

The Ontario VHF Association will hold its annual get-together at Humber College North Campus in Ontario, Canada, on Saturday September 27, 2008. The event is billed as a great way to meet and mingle with some of the best

VHF, UHF, microwave gurus as well as other weak signal enthusiasts and experimenters. More info and directions to the college can be found on the web at home.cogeco.ca or by e-mail to Hugh Duff, VA3TO, at hduff (at) cogeco (dot) ca (Ontario VHF Association)

HAM RADIO IN SPACE: A CUTE EARTH MOVIE

The Amateur Radio Cute 1.7 satellite better known as CO-65 has taken a short motion picture of the Earth as viewed from orbit. The video was taken while Cute was over Japan. It's very brief but the team say it is the first ever taken by a tiny 3 kg microsat. The CO-65 also team says that its planning to take pictures and videos continuously. This first one was taken at July 17th at 02:14 UTC. It can be seen on line at www.southgatearc.org/news/august2008/earth_movie.htm (Southgate)

**

ON THE AIR: NASA GLEN ARC TO CELEBRATE NASA AT 50

Members of the NASA Glenn Amateur Radio Club in Cleveland. Ohio, will be on the air from October 1st through the 6th. This, to celebrate the 50th anniversary of the famed U.S. space agency.

The club will be active daily from 2200 to 0500 UTC on 1.880, 3.880, 7.280 and 14.280 MHz. The callsign to listen for is NA8SA. If you work NA8SA, QSL to the NASA Glenn Amateur Radio Club Lewis Field, 21000 Brookpark Rd, MS8-1, Cleveland, Ohio. 44135-3191. More information is on line at www.grc.nasa.gov/WWW/Clubs/NA8SA (OPDX)

**

DX

In D-X, DA0HEL will be active from Helgoland Island in the North Sea from September 6rth through the 8th. The operation will be taking part in the IARU VHF Contest on 2 meters CW/SSB. QSL this one only via the Deuscher Amateur Radio Club bureau.

W8AV will be on the island of Curacao through September 10th. He will be operating from the PJ2T Signal Point station with his own call portable PJ2. He plans to be on CW as well as RTTY . This is an antenna maintenance trip, so he will only be on only as time permits. QSL as directed on the air.

K3GV slash VY2 will be on the air from Prince Edward Island, Canada through September 22nd. He is active is on 20 and 15 meters around the usual Islands on the Air frequencies. QSL via his home callsign, direct or by the bureau.

Look for the special call PA90CORUS from the Netherlands on all bands and modes through September 28th. This in celebration of the 90 years history of CORUS in that nation. The QSL manager is PB7CW. More information is at

www.pb7cw.net/corus .

Lastly, members of the Czech and Slovak OM0C Contest Crew have announced that they plan to mount a DXpedition to Suriname an expect to be active from here between October 21st to the 30th. Operation will be on 160 through 10 meters plus VHF on 6 and 2 including some EME. The same group also plans to be active as PZ5Z in the CQ World Wide SSB DX Contest on October 25th and 26th. QSL via OM2FY, by the Bureau or direct. More is on-line at www.om0c.com/suriname.

Above from various DX news sources.

THAT FINAL ITEM: THE TICK

And finally this week, most ham are well aware of time standard station WWV at Ft. Collins, Colorado . Its run by the National Institute of Standards and Technology and radiates 10,000 watts on 5, 10, and 15 MHz; and 2500 watts on 2 point 5 and 20 MHz. And over the years WWV broadcasts time and frequency information 24 hours per day, 7 days per week to millions of listeners worldwide.

Well now it appears to have an on-line rival. Well, one thats at least a tongue in cheek rival called "The Tick." Take a listen:

--

THE TICK HERE

--

The Tick is the creation of Douglas Grant, KD1TJ, who happens to own Lownoise Productions in Tucson, Arizona. We asked him to tell us how The Tick came about.

--
KD1TJ: "Back in the late 70's, about the time that I got my ham ticket and while I was still working in commercial radio, I turned a broadcaster and friend of mine onto shortwave listening, which I had been doing since the 60's. I sold him one of my used radios and he became familiar with what was on the dial. He would listen to Vladimir Posner on Radio Moscow, theatrical works on the BBC and all the other noises that you hear like WWV. So he and I used to joke about the announcements that might be heard on that time and frequency station if it were commercial radio, like -- all the time, all the time.

"Fast forward to 2003. Another friend of mine had moved to Atlanta and was working as a television engineer for The Weather Channel. And he revealed that one of the local TV weathermen on the air in Atlanta was in fact one of the voices of WWV -- John Doyle.

"So on a whim I wrote to John and I told him about some of the laughs we'd had at WWV's expense over the years and inquired if he might want to voice

ome lines in order to create a spoof . And, to my delight he liked the idea, did some recording for me. What resulted is The Tick. The new WWV."

--

Grant tells Newsline that he has received lots of very positive feedback since he brought The Tick to the world of cyberspace several years ago. You can check out "The Tick" for yourself at www.lownoiserecords.com/wwv_the_tick.html (ARNewsline" and The Tick)

==> ARRL, AMATEUR RADIO GEARS UP FOR HANNA, IKE

As the ARRL Headquarters staff continues to support response and
recovery efforts in Louisiana and the areas impacted by Hurricane
Gustav, yet another storm begins to shift some of the focus eastward.
Tropical Storm Hanna, currently forecast to impact the North and South
Carolina coastline early Saturday morning, has begun to activate ARES
```

preparations from Florida northward. Hanna is responsible for at least 137 deaths in Haiti.

According to the National Weather Service (NWS), a hurricane watch is in effect from north of Edisto Beach, South Carolina to Okracoke Inlet. A tropical storm watch remains in effect from Edisto Beach southward to Altamaha Sound, Georgia. A tropical storm warning remains in effect for the Central and Northwestern Bahamas. A tropical storm watch means tropical storm conditions are possible within 36 hours.

ARRL Emergency Preparedness and Response Manager Dennis Dura, K2DCD, has begun to put protocols in place to support any of the ARRL Sections that may be impacted by Hanna. "We are beginning the coordination efforts with the individual Sections that could be on the receiving end of what is becoming an active storm season for the United States mainland. While Hanna currently remains a tropical storm, we must ensure that all Amateur Radio preparations are in place in case the storm turns into a hurricane."

According to ARRL North Carolina Section Manager Tim Slay, N4IB, hams in his state are ready for Hanna. "The Amateur Radio Station at the State Emergency Operations Center is ready to go. We will begin operating from there on Friday at 8 PM and go until about mid-day on Saturday or for however long is needed." Slay also said the Tarheel Emergency Net, the North Carolina HF ARES Net that meets on 3.923 MHz, has been tested and is prepared for the incoming storms.

Slay said that hams in his state have verified that the equipment is all in working order at the State Emergency Operations Center. The South Carolina Healthcare Emergency Amateur Radio Team (SCHEART) <http://www.scheart.us/> -- a system of strategically located repeaters linking 64 South Carolina hospitals by Amateur Radio, forming a statewide emergency communications network -- is also on alert.

ARRL South Carolina Section Manager Jim Boehner, N2ZZ, said South Carolina Governor Mark Sanford has called for a voluntary evacuation for those who live along that state's coastal areas. "It's incredibly important that we be prepared [for Hanna] and for people in areas that could be the most affected to be prudent," Governor Sanford said. "More than anything, this storm may serve as a reminder to everyone along the coast to be prepared for what could still come your way in this season. That means having a full tank of gas, a storm kit and an evacuation plan as these storms head our way."

The Weather Channel's Tim Ballisty called Hanna an "ugly mess" since the storm is not acting like a typical storm: "Hanna has no markings of a classic-looking tropical cyclone. It is a highly disorganized tropical storm and will have a lot to do in a short period of time to organize and strengthen to a hurricane."

Ballisty warned that people should not be fooled by Hanna's appearance. "It is important to note that one should not focus solely on [Hanna's]

center of circulation," he said. "In fact, the worst of Hanna may not actually be found close to the center of circulation but rather away from it. Impacts such as tropical storm-force gusts, tropical downpours and very choppy surf will be felt hundreds of miles away from the center. That being said, the center of Hanna is projected to make landfall near the coastal South Carolina/North Carolina border, or perhaps just east of there, very early on Saturday morning."

After landfall, Hanna is expected to spread rain and breezy conditions up the mid-Atlantic and Northeast coast on Saturday, impacting several major cities. Due its rapid forward speed, the storm will not linger. Hanna will be exiting off the New England coast by as early as mid-morning Sunday. Rainfall totals are not expected to come anywhere close to what was seen with Hurricanes Fay or Gustav.

"If nothing else, [Hanna is] a good dress rehearsal for Ike if Ike were to come," said Peter Judge, a spokesman for the Massachusetts Emergency Management Agency.

Fast on Hanna's heels, Ike is the third major hurricane of the 2008 Atlantic hurricane season; it is not yet threatening any land. A Category 4 hurricane on Thursday, Ike was downgraded to Category 3 early Friday morning.

For now, Ike is of no threat to land, but could threaten the Bahamas by Sunday and into early next week. Residents of the Bahamas should monitor Ike carefully the next several days. Ballisty said that as of now, it is too early to tell if Ike would have any impact on the United States. "The entire Southeast coast should pay close attention to the progress and forecast track of Ike," he said.

Josephine, a tropical storm in the eastern Atlantic remains fairly weak. It continues to struggle with maximum sustained winds now near 50 MPH; this storm is currently no threat to land; however, the storm continues to feel the effects of wind shear and dry air, and this may keep any additional strengthening in check. Josephine will continue to move west-northwest over the next several days and will not be a threat to land in the near future.

==> AMATEUR RADIO OPERATORS WERE READY FOR HURRICANE GUSTAV

After several days of harrowing watching and waiting for Hurricane Gustav to make landfall, the storm slammed into southeast Louisiana Monday afternoon, leaving flooding, wind damage and power outages in its wake and evacuees eager to go home. As Amateur Radio operators across the area moved from an emergency response stance to clean-up, evaluation and repair, the need for some changes to operations and equipment became clear, as well as the vastly improved response as compared to Hurricane Katrina. As the storm made its way inland, ARRL Division, Section and public information volunteers in and around the area impacted by the Category 2 hurricane, reported that they were preparing to deploy themselves and other volunteers to strategic locations once conditions

allow.

Throughout the week, staff at ARRL headquarters coordinated conference calls between key emergency communications volunteers, Division and Section leadership officials and ARRL HQ in order to facilitate communications among the participants and to respond to any requests for assistance. Dennis Dura, K2DCD, ARRL Emergency Preparedness and Response Manager, commented: "Based on what we hear and what we receive in the daily situation reports, it will really dictate what kind of response we're going to have. In the beginning of a storm event, we don't have a clear idea of what the needs are. Once those on the scene tell us what they need, we will support them. Requests for emergency communications personnel will come from Section Managers or their designees, and we as an organization will meet those requests. Gustav is different from Katrina in a lot of ways. For one thing, people are much better prepared down there."

On Monday, September 1, Louisiana Section Manager Gary Stratton, K5GLS, told conference call participants that he was expecting to head to the Baton Rouge Red Cross Marshalling Center the next day. He reported that credentialing for ham volunteers who will be sent to locations requesting Amateur Radio support was being handled, and emergency nets were activated. Louisiana Section Emergency Coordinator Jim Coleman, AI5B, expected to head to Baton Rouge Tuesday as well.

Assistant South Texas SM Mike Schwartz, KG5TL, of Muldoon, reported that 4500 New Orleans-area evacuees were relocated to shelters in surrounding counties. He reported that about 20 ham radio operators were ready to travel to where they are needed. "When we find out, we're ready to deploy," he said.

Mississippi SM Malcolm Keown, W5XX, of Vicksburg, expressed concern about the impending effects from Gustav. He said up to 20 inches of rain could fall in central Mississippi, and tornado warnings have been issued.

Southeastern Division Vice Director Sandy Donahue, W4RU, mentioned that numerous Red Cross shelters have been set up in Georgia to handle the needs of evacuees.

Northern Florida Section Manager Paul Eakin, KJ4G, offered the services of four Winlink stations to forward messages from the states more directly affected, as needed.

ARRL Directors Henry Leggette, WD4Q, of the Delta Division, Greg Sarratt, W4OZK, of the Southeastern Division and Coy Day, N5OK, of the West Gulf Division also took part in the September 1 conference call, as did West Gulf Vice Director Dr David Woolweaver, K5RAV, and Delta Vice Director Karl Bullock, WA5TMC.

At Poplarville, Missisippi -- county seat of Pearl River County -- Emergency Operations Center Communications Officer David Moore, N5ELI, said, "We have some stuff to do, but it's not bad." He noted a defective

antenna that was discovered during operations for Gustav, as well as a few operational details that need to be worked out before future events. But, noted ARRL Mississippi Section Public Information Coordinator Larry Wagoner, N5WLW, who manned the Emergency Operations Center in Picayune, Mississippi, essential services were provided in spite of the problems, as contact was maintained with the shelters in the area as well as other individuals and agencies needing assistance.

Harrison County Emergency Coordinator and District Emergency Coordinator for the Gulf Coast District Tom Hammack, W4WLF, echoed that reaction, noting the heavier damage to his coastal community: "The harbors are torn up," he observed, saying that a small tornado had been sighted near the port, which reportedly damaged a few buildings in the area and knocked out power for a time.

"We had communications with the Coast Guard representatives, on 2 meters, as well as marine VHF," Hammack said. "We had hams at other locations as well." He noted that Ed Byrd, KA5VFU, had the radio links to the area hospitals working, too. "In general it went pretty fair," he said. "This was a cakewalk for us compared to Katrina," Hammack noted, adding, "But the farther west went you go, it wasn't any cakewalk at all. Hancock County (located due west of Harrison County) got hit pretty hard."

North of the coast, Tim Purvis, N5UDK, Emergency Coordinator for Stone County and Assistant Emergency Coordinator for the Gulf Coast District noted that one mobile home was destroyed in the storm. "All in all, it went real well," he said. Like the other officials in the area, he said the storm was a learning exercise for the Amateur Radio community. "We need to get our repeater to a higher location and we need to get more people with emergency Yagis." He said in some cases, hams in outlying areas of the county had a hard time making it into the repeater during the storm. "These are people who may have lost or taken down their antennas," he said, "and they were trying to operate on a mag mount on top of a refrigerator from 20 miles away."

One problem noted by several officials in the area was the signal propagation from the Mississippi Emergency Management Agency (MSEMA) office near Jackson. "A new antenna up there would help," said one. "We had a real hard time copying the signal from MSEMA," said another.

Local hams were not the only ones learning lessons from the storm. Purvis noted that while the MSEMA official at the Stone County Emergency operations Center was familiar with Amateur Radio, the Federal Emergency Management Agency (FEMA) representative did not know anything about ham radio and the service that hams provide before the storm. By the end of operations Tuesday, she had quite an education, Purvis said, noting that she was not only very impressed with what hams can do, but now wants to become licensed as an Amateur Radio operator herself and is very interested in SKYWARN operations. "We have a feather in our cap on that one," Purvis said.

SKYWARN operations went well across the region, as hams from all over the southern Mississippi area called in to report sightings of severe weather and damage from the storm. "Like you (in Pearl River County), we were inundated by warnings and reports," Purvis said, adding, "I just wish we could get all those people to sign in on a regular basis."

Local officials said the area fared much better in Gustav than in 2005's Hurricane Katrina. "Compared to Katrina, we didn't lose any local communications, phone or Internet. In Katrina, they lost everything," said Purvis. "Our major function was communications with the shelters, storm spotting and being on standby for other services," he added.

Stone County had one shelter open, which closed early Tuesday. Those requiring longer stays were transferred to shelters in Picayune and Hattiesburg. The Stone County shelter housed about 50 people at one point. The shelter in Picayune had about 130 people maximum -- mostly from Louisiana, where nearby New Orleans and St Tammany Parishes remained closed Tuesday.

By Tuesday morning, crews were out evaluating damage to local power lines, cable TV, phone lines and trees, and hams were getting ready for the next time they are called to serve, keeping a close eye on Hurricane Hanna and Hurricane Ike.

==> ARRL HAM AID GO KITS SUPPORT AMATEUR RADIO OPERATIONS DURING HURRICANE GUSTAV -- AND BEYOND

As Amateur Radio operators prepared for Hurricane Gustav, the ARRL deployed complete radio stations comprised of industry-donated Amateur Radio equipment, thanks to the generous contributions of ARRL members to the Ham Aid Fund. Created in 2005 to assist with the response to Hurricane Katrina, the Ham Aid Fund is designated to finance Amateur Radio equipment needed for disaster response. In preparation for Hurricane Gustav, ARRL received requests for radio equipment from Louisiana and Texas. The shipping costs for this equipment were covered by the Ham Aid Fund.

According to Assistant Manager of the ARRL Membership and Volunteer Programs Department Norm Fusaro, W3IZ, several kits were shipped to Louisiana; Fusaro is handling Ham Aid requests during Hurricane Gustav. "We sent three HF kits, 3 VHF/UHF kits and a combination kit complete with HF, VHF and handheld transceivers to the Louisiana Office of Homeland Security and Emergency Preparedness (GOHSEP) facility in Baton Rouge, as well as four VHF/UHF base antennas and a support box that included coax, rope, wire antennas and connectors." Fusaro also said that a 600 W amplifier was sent to Jim Coleman, AI5B, in Bogalusa, Louisiana to be used at the Emergency Operations Center there, and an HF radio was sent to Joel Colman, NO5FD, of New Orleans, replacing his rig that was damaged during set up at the firehouse.

"To me, these Go-Kits ramp up ARRL's ability to support Amateur Radio volunteers in the field when the next big disaster hits," said ARRL Chief Development Officer Mary Hobart, K1MMH. "They won't replace or

supplant anything that's already on the ground and working well, but the kits will strengthen it and add flexibility to Amateur Radio's overall response capabilities."

In setting up these Go Kits, League staffers consulted with volunteers who were in the field during Hurricane Katrina to find out what gear served them best or what they wished they'd had but didn't. The Go Kits, stowed in rugged, waterproof Pelican 1650 containers, enable the League to loan out needed equipment on a moment's notice. "The idea is that this makes it easy to ship," explains Fusaro, "and since they're less than 50 pounds apiece, they can be shipped by air."

The HF Kit contains a 100 W HF transceiver, a tuner and antenna, a microphone and a power supply. The VHF/UHF Kit includes a dualband mobile transceiver, power supply, headset, 10 handheld transceivers and a supply of alkaline batteries. In the Handheld Transceiver Kit are eight dualband handheld transceivers and antennas, plus a stock of extra batteries. The Support Kit includes a length of BuryFlex RG-213 coaxial cable, rope, 15 foot jumper cables with battery clamps at one end and an Anderson Powerpole on the other. The kit includes various fittings and adapters to connect to the power distribution unit and to make RF feed line connections. All kits contain any necessary manuals.

Hobart said it's imperative to sustain and enhance ham radio's emergency communication capabilities for the future: "Disasters happen to be one place Amateur Radio can shine," she pointed out. "We need to maintain a high level of readiness to do those things that are second nature to ARES members, but that the public is just coming to recognize." Making the Go Kits available to ARES teams, Hobart said, will help to cement Amateur Radio's position as a community resource. "We want to be able to ensure that we have the personnel and the equipment," she said. "With a disaster of any magnitude, we need to be ready."

Since the arrival of Hurricane Gustav, Hobart said that the Ham Aid fund has been depleted. "With more storms on the horizon, the ARRL is seeking member contributions to rebuild the Ham Aid Fund. This vital lifeline of resources to support the ARRL Field Organization and Amateur Radio Volunteers will benefit from the renewed generosity of radio amateurs." Contributions in any amount can be made online <https://www.arrl.org/forms/development/donations/basic/>.

==> LOOK FOR THE OCTOBER ISSUE OF QST IN YOUR MAILBOX

The October issue of QST -- our first-ever Radiosport issue -- is jam-packed with all sorts of things today's Amateur Radio operator needs, with a special focus on Amateur Radio contesting. From product reviews to experiments to public service, the upcoming issue of QST has something for just about everyone.

Steve Clifford, K4GUN, offer his views "On Becoming a Rove Warrior." In this article, Clifford expounds on the joys of roving -- mobile operating in VHF+ contests -- and offers some lessons and tips gleaned

from his first roving operation. Gil McElroy, VE1PKD, gives readers "A History of Radiosport." Did you know that CQ CONTEST could be heard on the bands as far back as the early 1920s? Discover the origins of how contesting began as McElroy takes us on a contesting history journey.

In addition to the articles featuring contesting, ARRL Contributing Editor H. Ward Silver, N0AX, has put together an 8 page radiosport insert -- you can easily find this section, thanks to the bright yellow page edges! This section will feature such articles as how to interpret your Log Checking Report, guidelines for the upcoming contest season and a list of resources that no contester should be without, as well as a listing of major contests throughout the year.

ARRL Contest Branch Manager Sean Kutzko, KX9X, announces how 2009 is the Year of the State QSO Party. Be sure to check out October QST to find out more about this exciting new event. Of course, no issue of QST would be complete without "Contest Corral" and "This Month in Contesting."

ARRL News Editor S. Khrystyne Keane, K1SFA, describes the events and decisions from the July ARRL Board of Directors meeting, as well as announces the six winners who were bestowed awards for 2007-2008.

If you're in the market for a new rig, be sure to check out October's Product Review: NCJ Managing Editor Rick Lindquist, WW3DE, gives his take on the ICOM IC-7700 HF and 6 meter transceiver. In his review, Lindquist says "The IC-7700's attributes seemed shaped more toward the serious contester and DXer, but it's a superior performer with features enough to attract any active HF or 6 meter enthusiast. The price will put the radio out of reach for some, but this piece of radio gear more than fills the average ham's desires, not to mention the operating desk."

Of course, there are the usual columns you know and love in October QST: "Hints & Kinks," "The Doctor Is IN," "How's DX," "Eclectic Technology," "World Above 50 MHz," "Hamspeak" and more. Look for your October issue to arrive soon. QST is the official journal of ARRL, the national association for Amateur Radio. QST is just one of the many benefits of ARRL membership. To join or renew your ARRL membership, please visit the ARRL Web page <http://www.arrl.org/join>.

==> MEMBERSHIP MANAGER TO LEAVE ARRL

On Friday, October 3, the ARRL HQ family will say goodbye to Membership Manager Katie Breen, W1KRB, as she moves away from her native Connecticut. In her short time here, Breen quickly became popular as she traveled to hamfests and conventions around the country -- as well as making videos that have been posted online -- promoting the League to members and non-members alike; she headed up the ARRL team at the 2008 Dayton Hamvention this past May <http://www.arrl.org/news/stories/2008/05/17/10103/?nc=1>.

"This job was much more than a job to me," Breen said. "Amateur Radio became part of my life. When I started, I honestly didn't think I'd ever

really understand the technical side of things, never mind actually build anything. Since coming to the ARRL, I've built my own antennas and a small transceiver; I couldn't have done any of this without my Elmers. Because of this experience, I've become a strong proponent of mentoring -- you don't have to be a ham for 50 years to become an Elmer."

Breen said that talking to hams around the country and then meeting them at hamfests, as well as connecting with new friends all over the world, has been an "amazing experience. I've loved going to Amateur Radio events and working with countless volunteers that give of their time, energy, experience and funds to continue to promote the Amateur Radio Service. I've had the unique opportunity to spend a lot of time with our field volunteers and I have seen personally the dedication and passion these folks have -- I think they are some of the biggest unsung heroes in ham radio. I don't know of any other hobby or service that has such dedication and passion. I am proud to have had the opportunity to make the personal connection, to bring a piece of ARRL Headquarters to our members and to help develop a sense of belonging for our members."

Breen's supervisor, ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, said that she will be missed "a great deal. Members -- and particularly new members -- appreciate her enthusiasm as an advocate for ham radio and ARRL. We've all enjoyed Katie's willingness to share her own stories as a new radio amateur."

Inderbitzen said the search to find a qualified candidate for ARRL Membership Manager is underway. Interested individuals should have a background in membership marketing and experience developing membership recruitment and retention strategies. An understanding of the Amateur Radio Service is desired. The complete job posting and instructions for applying can be found online on the ARRL's Job Announcement Web page <http://www.arrl.org/announce/jobs/>.

==> IARU REGION 2 EC: "ACTIVE MEMBER-SOCIETIES ARE VITAL TO ENSURE AMATEUR RADIO'S FUTURE"

Late last month in Panama, the Executive Committee of IARU Region 2 <http://www.iaru-r2.org/> held its annual meeting. According to IARU Region 2 President Reinaldo Leandro, YV5AMH, the importance of having active and inclusive IARU Member-Societies is the "only way to ensure the future of Amateur Radio." Leandro said this theme was "underlined" throughout the meeting. The United States is a member of Region 2.

At the meeting, the Executive Committee called on the Region 2 Area Directors to establish links at the area and country level to work with an Emergency Communications and Monitoring System. Once those links are established, the Area Directors will work with recently designated Coordinators in the Region <http://www.iaru-r2.org/coordinators/>.

The Committee heard reports regarding the IARU's participation in the International Telecommunication Union (ITU), the Inter-American Telecommunication Commission (CITEL) and the Caribbean

Telecommunications Union (CTU). The CTU is aware of the importance of radio amateurs in emergency situations and has requested the IARU's support to have active Member-Societies in its region. CTU countries include Anguilla, Antigua and Barbuda, The Bahamas, Barbados, Belize, Cayman Islands, Dominican Republic, Grenada, Guyana, Jamaica, Montserrat, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Suriname, Turks and Caicos, and Trinidad and Tobago; the IARU is an Associate Member of CTU.

Other actions by the Executive Committee included:

* The Executive Committee initiated preparations to participate in Telecom Americas 2010, to be held in Buenos Aires, Argentina in March 2010 <http://www.itu.int/americas2010/>.

* The Committee requested the support of the Region 2 Member-Societies in order get more countries in the region to sign on to the International Amateur Radio Permit (IARP) <http://www.arrl.org/FandES/field/regulations/io/>. Countries that currently accept the IARP are Argentina, Brazil, Canada, El Salvador, Panama, Peru, Trinidad and Tobago, United States, Uruguay and Venezuela.

* The Committee announced that an introductory study guide for all those interested in becoming new radio amateurs will be made available in Spanish within the next few months. This guide will be published in a digital format, allowing for easy distribution.

* Emergency Communications Coordinator Cesar Pio Santos, HR2P, advised the Executive Committee that he is compiling an inventory of emergency networks in Region 2. The Committee decided that the listing should be completed "as soon as possible" and underlined its importance to the region.

The next Region 2 Executive Committee meeting will be in September 2009 in Lima, Peru.

The meeting was attended by President Reinaldo Leandro, YV5AMH; Vice President Dario Jurado, HP1DJ; Secretary Ramon Santoyo V., XE1KK; Treasurer and Area E Director Noel E. Donawa, 9Y4NED; Area A Director Daniel A. Lamoureux, VE2KA; Area B Director Rod Stafford, W6ROD; Area C Director Pedro Rodriguez, CO2RP; Area D Director Marco Tulio Gudiel, TG9AGD, and Area G Director Reinaldo Szama, LU2AH. IARU President Larry Price, W4RA was also present, representing the IARU International Secretariat.

==> PENTAGON AMATEUR RADIO CLUB TO HOST SPECIAL EVENT STATION COMMEMORATING 9/11

On Thursday, September 11, the Pentagon Amateur Radio Club (PARC) will operate a Special Event station commemorating the 7th anniversary of the attacks that occurred on the Pentagon, the World Trade Center and over Pennsylvania in 2001 <http://www.k4af.org/>.

This special event will be held in conjunction with President Bush's visit to the Pentagon to dedicate the new Pentagon Memorial <http://www.defenselink.mil/home/features/2008/0708_memorial/index.html>, honoring the 184 people, both at the Pentagon and on American Airlines flight 77, who lost their lives in the attacks. Operators will be on 10, 15, 20, 40 and 80 meters -- both phone and CW -- with plans to operate on a 12 hour basis (1200-2400 UTC). There will be a special QSL card available for stations that work K4AF.

For more information, please contact Gary Sessums, KC5QCN <kc5qcn@arrl.net>. QSL via PARC, PO Box 2322, Arlington, VA 22202.

==>SOLAR UPDATE

Tad "Happy we who can bask in this warm September Sun" Cook, K7RA, this week reports: We're still looking at a quiet sun, but currently a solar wind is disturbing the Earth's magnetic field. Six meter operators -- after enjoying a fine season of sporadic E propagation this summer -- may see some added excitement from auroral propagation. The planetary A index was 33 on Thursday, September 4, the highest daily number in over a year. I don't know when it was last that high, but the closest recent numbers were 32 on April 23, and 31 on March 27. Planetary A index for September 5-10 is predicted to be 20, 15, 8, 5, 5 and 5. It is expected to rise to 20 on September 14. Sunspot numbers for August 28-September 3 were 0, 0, 0, 0, 0, 0 and 0 with a mean of 0. The 10.7 cm flux was 66.1, 66.8, 67.1, 66.7, 65.8, 66 and 66.2 with a mean of 66.4. Estimated planetary A indices were 2, 3, 3, 3, 4, 3 and 7 with a mean of 3.6. Estimated mid-latitude A indices were 2, 2, 2, 2, 2, 2 and 7 with a mean of 2.7. There has been some news about the current solar minimum regarding continuous days without spots. August was the first calendar month with no sunspots since 1913. Of course, there have been periods longer than 30 days, but generally over a two calendar-month period in which there were some sunspots in each month. As of Thursday, September 4, there have been 46 continuous days with no spots. That is the seventh longest period of no spots, looking back over 150 years to the mid-19th century. If there are no sunspots through this Sunday, at 49 days this will be the fourth longest spot-free period. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>. To read this week's Solar Report in its entirety, check out the W1AW Propagation Bulletin page <http://www.arrl.org/w1aw/prop/>. This week's "Tad Cookism" brought to you by Henry David Thoreau's "A Week on the Concord and Merrimack Rivers."

==>IN BRIEF:

* This Weekend on the Radio: The International G3ZQS Memorial Straight Key Contest is September 5-7. On September 6, be sure to look for the Russian RTTY WW Contest, the NCCC Sprint, the Wake-Up! QRP Sprint and the AGCW Straight Key Party. The All Asian DX Contest (Phone), the RSGB

SSB Field Day and the IARU Region 1 Field Day (SSB) are September 6-7. The North American Sprint (CW) and the DARC 10 Meter Digital Contest are September 7. The Tennessee QSO Party is September 7-8. Next weekend, look for the ARRL September VHF QSO Party on September 13-15. The NCCC Sprint is September 12 and the PODXS 070 Club 80 Meter Autumn Sprint is September 12-13. The FISTS Get Your Feet Wet Weekend is September 12-14. The Swiss HTC QRP Sprint is September 13. The WAE DX Contest (SSB) and the Arkansas QSO Party are both September 13-14. The North American Sprint (SSB), the SKCC Weekend Sprintathon and the ARCI End of Summer Digital Sprint are September 14. The NAQCC Straight Key/Bug Sprint is September 18. All dates, unless otherwise stated, are UTC. See the ARRL Contest Branch page <http://www.arrl.org/contests/>, the ARRL Contest Update <http://www.arrl.org/contests/update/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info. Looking for a Special Event station? Be sure to check out the ARRL Special Event Station Web page <http://www.arrl.org/contests/spev.html>.

* ARRL Continuing Education Course Registration: Registration remains open through Sunday, September 21, 2008 for these online course sessions beginning on Friday, October 3, 2008: Amateur Radio Emergency Communications Level 1 (EC-001); Radio Frequency Interference (EC-006); Antenna Design and Construction (EC-009); Technician License Course (EC-010); Analog Electronics (EC-012), and Digital Electronics (EC-013). Each online course has been developed in segments -- learning units with objectives, informative text, student activities and quizzes. Courses are interactive, and some include direct communications with a Mentor/Instructor. Students register for a particular session that may be 8, 12 or 16 weeks (depending on the course) and they may access the course at any time of day during the course period, completing lessons and activities at times convenient for their personal schedule. Mentors assist students by answering questions, reviewing assignments and activities, as well as providing helpful feedback. Interaction with mentors is conducted through e-mail; there is no appointed time the student must be present -- allowing complete flexibility for the student to work when and where it is convenient. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* ARRL Sets up E-mail Addresses for Use During Hurricanes, Tropical Storms: In an effort to streamline hurricane support operations at ARRL Headquarters, the League has set up two e-mail addresses for hams to pose questions or relay information to HQ Staff relating to hurricane or named tropical storm events. If you need to communicate with ARRL HQ regarding these storms, please use <hurricane@arrl.org> or <hurricane@arrl.net>. These e-mail addresses will be monitored during each storm's descent on the US, as well as throughout the hurricane season.

* Steven Weber, KD1JV, Wins August QST Cover Plaque Award: The winner of the QST Cover Plaque Award for August is Steven Weber, KD1JV, for his article "A 40 Meter CW/SSB Transceiver for the Homebrew Challenge."

Congratulations, Steven! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the September issue by Tuesday, September 30.

* MARS Assists with Hurricane H&W Traffic for American Soldiers in Iraq, Afghanistan: Army Captain Jeff Hammer, N9NIC, who represents the Army Military Affiliate Radio System (Army MARS) <http://www.netcom.army.mil/mars/> in Iraq, has appealed to the families of troops deployed overseas that have been affected by the recent tropical storms and hurricanes to let their loved ones know all is well at home. "There are a lot of soldiers from the Gulf States here in Iraq," Hammer said, "and their families may be impacted by the hurricanes and not have a way to communicate with their soldier to let them know their status in the coming week(s). If you are unable to deliver hurricane-related Health and Welfare messages from a family member to a service member in Iraq due to lack of communication assets or insufficient address information, send them directly through an Amateur Radio operator or Military Affiliate Radio System (MARS) operator <AEN5NAA@winlink.org>. MARS operators currently deployed in Iraq will do their best to get all messages delivered immediately." Hammer said that Army MARS also can handle messages to service members in Afghanistan, but delivery may be delayed. Direct entry of MARSgrams is available via the MARSgram Web site <http://www.mymars.org/>. The site provides full instructions and a message form that will be transmitted automatically via the Army MARS system.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the national association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org
==>Editorial questions or comments: S. Khrystyne Keane, K1SFA, k1sfa@arrl.org
==>ARRL News on the Web: <http://www.arrl.org>

==>ARRL Audio News: <http://www.arrl.org/arrlletter/audio/> or call 860-594-0384

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Amateur Radio Newsline(tm) Report 1622 - September 12, 2008

Amateur Radio Newsline report number 1622 with a release date of Friday, September 12th, 2008 to follow in 5-4-3-2-1.

The following is a QST. The sun stays silent and so does High Frequency DX, ham radio prepares to face Hurricane Ike, South Africa may give its hams some new operating privileges, Russia considers joining the pan-European CEPT licensing scheme, and a report on this years World Radiosport championship games. All this and more coming your way on Amateur Radio Newsline(tm) report number 1622 as we begin right now.

(Billboard Cart Here)

RADIO SCIENCE: SOLAR OBSERVERS REPORT NO SUNSPOTS IN AUGUST

A new record has been set by the sun, but its not one that will make hams who need long range propagation very happy. Amateur Radio Newsline's Jeff Reinhardt, AA6JR, reports:

--

Daily Tech dot com says that the sun has reached a milestone not seen for nearly 100 years. That being an entire month has passing without a single visible sunspot being recorded.

Sunspot data has been collected since 1749. According to statistics from Mount Wilson Observatory here in Los Angeles, the entire month of August passed without a spot being seen on the face of the sun. The last time such an event occurred was June of 1913.

When the sun is active, it's not uncommon to see sunspot numbers of 100 or more in a single month. Every 11 years, activity slows, and numbers briefly drop to near-zero. Normally sunspots return very quickly, as a new cycle begins. However, this year which corresponds to the predicted start of Solar Cycle 24 has been extraordinarily quiet, with the first seven months averaging a sunspot number of only 3. August followed with none at all.

The researchers say that the astonishing rapid drop of the past year has defied predictions, and caught nearly all astronomers by surprise. The event is significant since many since scientists who follow climate changes now believe solar magnetic activity or lack of it is an influencing factor for climate on earth.

For ham radio operators who depend on high solar activity to produce long communications paths, the silence on the High Frequency bands due to a lack of sunspot activity is all but deafening. As we go to air, no sunspots are reported as visible and the number of distant signals the average ham station can hear and work on most of the High Frequency bands remains at what is likely an all time low.

For the Amateur Radio Newsline, I'm Jeff Reinhardt, AA6JR, in Los Angeles.

--

The complete article on the lack of solar activity and its effect on climactic change is on line at
www.dailytech.com/Sun+Makes+History+First+Spotless+Month+in+a+Century/articl
e12823.htm)

RESTRUCTURING: NEW RSA BANDPLAN FAVORS ZS HAMS

Proposed changes in South Africa's allocation table for radio spectrum use could mean more operating privileges for Zed-S hams. Jim Meachen, ZL2BHF, has the details:

--

On July 22nd, South Africa's telecommunications regulator published the revised table of frequency allocations, a process that is mandated by that nations Electronic Communication Act. The proposed South African table includes the expansion of the 40 meter band to 7 200 kHz as well as a new low frequency allocation from 135 point 7 to 137.8 kHz in the long wave spectrum. Also the limitation that currently exists for Zed R prefix hams in the 14 MHz band has been removed. The South African table of frequency allocations also include an interesting grant for use by radio amateurs in the 40 MHz band. The frequencies 40 point 675 to 40 point 685 MHz may be used for propagation studies with a maximum power limit of 10 Watt EIRP, but limited to Zed S prefix licensees.

The South Africa Radio League has reviewed the proposal and has made a formal suggestion to the nations telecommunications regulator concerning 160 Meters. SARL would like to have the 160 meter band expanded to 2 point zero MHz. It also would like to see a new allocation in the 5 MHz spectrum.

SARL has also addressed spectrum needs in the 2 300 to 2 450 MHz microwave ham band and also an allocation in the 3300 to 3 500 MHz band. It says that this would align South Africa with other parts of the world where this band is being considered for amateur satellite use. This allocation is not generally allocated in ITU region one except in some individual CEPT countries who have an allocation for amateur satellites in the 3400 to 3410 MHz band.

Reporting from down under in Auckland, New Zealand, I'm Jim Meachen, ZL2BHF, for the Amateur Radio Newsline.

--

The next step is for the South African governments telecommunications agency to review all the comments received and to hold public hearings if it feels that they are required. Once the final table has been agreed, it will be published in the Government Gazette together with the date of when the new table will replace the old one. In the meantime. South Africa hams are advised that this is all still a proposal. All current South African ham radio regulations and allocations remain in force. (SARL)

**

WORLDBEAT - RUSSIA: CEPT LICENSING MAY BE ON ITS WAY

Russia may be on the verge of signing on to the pan-European CEPT ham radio licensing scheme. According to information supplied by Mitch Wolfson, DJ0QN, a working committee in that nation recently held a workshop to prepare a draft recommendation to the State Commission on radio frequencies. In it, the committee recommends joining the T/T 61-01 agreement for reciprocal licensing in 2009.

The only objection came from those concerned with issues of national security, but the proposal worked out seems to satisfy Russia's Federal Security Service and its expected that the proposal will move forward into the Russian rulers making process. More information in the Russian language is at hwww.srr.ru. (DJ0QN)

**

RESCUE RADIO: MARS OFFERS COMMUNICATIONS TO STORM FAMILES

A message of support for military families from MARS. Captain Jeff Hammer, N9NIC, who represents the Army Military Affiliate Radio System in Iraq, has appealed to the families of troops deployed overseas that have been affected by the recent tropical storms and hurricanes to let their loved ones know all is well at home.

According to Hammer, there are a lot of soldiers from the Gulf States here in Iraq and their families may be impacted by the hurricanes and not have a way to communicate with their soldier to let them know their status in the coming weeks. He says that if you are unable to deliver hurricane-related Health and Welfare messages from a family member to a service member in Iraq due to lack of communication assets or insufficient address information, send them directly through an Amateur Radio operator or Military Affiliate Radio System operator. He says that MARS operators currently deployed in Iraq will do their best to get all messages delivered immediately.

Hammer adds that Army MARS also can handle messages to service members in Afghanistan, but delivery may be delayed. A direct entry MARSgram form is available at www.mymars.org. The site provides full instructions and a message form that will be transmitted automatically via the Army MARS system. (MARS)

RESCUE RADIO: HAMS MAKE READY FOR HURRICANE IKE

Ham radio operators along Texas eastern shore are preparing for the onslaught of hurricane Ike. The storm that spent two days ravaging Cuba is now in the open waters of the Gulf of Mexico. Bill Pasternak, WA6ITF, has more:

--

As this newscast is prepared on Thursday, September 11th, Ike is a Category 3 hurricane packing winds in excess of 130 miles per hour. It is moving West-North West at between 8 and 10 miles per hour with landfall predicted early on Saturday the 13th somewhere along the south-Texas coastline between Brownsville and Houston.

In anticipation of Ike, the ARRL and its South Texas Section have made large scale preparations to provide any needed communications. And according to Allen Pitts, W1AGP, who is the ARRL headquarters Media and Public Relations Director in Newington, the League has already sent emergency radio equipment into the area to pre-position gear for deployment. Also, plans are in place for bringing in radio amateurs from their states and regions if needed. Pitts adds that coordination is also in place with the Red Cross, Salvation Army, Baptist Men's kitchens, many Emergency Operations Centers and other relief agencies.

The ARRL has also established a pair of e-mail addresses for hams to use to pose questions or relay non-emergency information to the headquarters staff relating to hurricanes or named tropical storm events. If you need to communicate with headquarters regarding storms like Ike, please use hurricane@arrl.org or hurricane@arrl.net. While these e-mail addresses are not monitored on a 24/7 basis, they are checked during each storm's descent on the US, as well as throughout the hurricane season.

Also on alert a numerous severe weather related networks. The Hurricane Watch Net will be operational primarily on 14.325 Mhz. Also playing a major role will be the Voice over Internet Protocol Weather Net that links together repeaters and individual stations using VoIP technology.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, at the studio in Los Angeles.

--

Hurricane Ike is a developing story. We will have more on it and the role of ham radio in next weeks Amateur Radio Newsline report. (ARNewsline(tm),

ARRL, others)

**

RESCUE RADIO: HAM RADIO WAS READY FOR HURRICANE HANNA

Packing winds gusts over 70 miles per hour, Hurricane Hanna, hit the United States on Saturday, September 6th at the border of North Carolina and South Carolina. But Amateur radio operators involved in emergency communications were ready for whatever the storm might pack, including the possibility that Hanna might spawn some tornadoes:

--
Net Audio
--

That was Jim Sellars, N0UAM, in control of the Voice over Internet Protocol Weather Net. He was putting out a warning from the National Weather Service that tornadic activity accompanying hurricane Hanna was possible.

Thankfully, Hanna caused minimal damage to coastal areas of the Carolinas as it moved North-North East at 28 miles per hour. According to the U.S. National Hurricane Center the storm did dump as much as 10 inches of rain as it meandered up the Eastern U-S. coast.

Before making landfall on U-S soil, hurricane Hanna devastated Haiti, which also was hit by Hurricane Gustav and Tropical Storm Fay in the past month. Hanna reportedly killed about 495 people in Haiti. United Nations humanitarian affairs chief John Holmes says that as many as 600,000 people may need assistance in that nation. (ARNewsline(tm))

**

ENFORCEMENT: FCC ORDERS FORM TO STOP SELLING GPS JAMMERS

A merchandiser of GPS jamming devices has been issued an official Citation by the FCC. Amateur Radio Newsline's Bruce Tennant, K6PZW, has the details:

--

In its September 8th notice to MicroVideoX, LLC of Grand Junction, Colorado, and owner Greg Marston, the regulatory agency alleges that a letter of inquiry dated last June 3rd the FCC initiated an investigation into whether MicroVideoX, LLC is marketing in the United States unauthorized radio frequency devices. Specifically, the GPS Counter Track, and the GPS Counter Track Portable.

The Commission says it found evidence that MicroVideoX, LLC was selling these devices through several sources including eBay. Also that it was running demonstration videos of them on YouTube dot com.

In its response to the June inquiry, MicroVideoX stated that it had imported a total of 53 GPS Counter Track units and 24 GPS Counter Track Portable units. Of these it had sold approximately 48 units. Also that it had marketed the devices on eBay and YouTube.com only until about March

13th.

But the FCC says that it observed the promotional video still active at another website as late as July 11th. This one called www.revver.com.

The bottom line. The FCC has ordered MicroVideoX to immediately cease the advertising and sale of these devices. It says that if after receipt of the citation, MicroVideoX violates the Communications Act or the Commission's Rules in any manner, that the Commission may impose monetary forfeitures not to exceed $11,000 for each such violation or each day of a continuing such a violation.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

MicroVideoX, LLC appears to be complying with the FCC edict. A check of eBay for a GPS jammer shows that currently no United States based company is advertising such a device there. However there are others outside the U-S with ads on eBay for similar devices and these companies claim that they ship, worldwide. (FCC)

**

RADIO THEFT: RADIO TOWER STOLEN IN PA

Scrap metal thieves have gotten more brazen this time trucking away a complete 120 foot high radio tower near Windbar, Pennsylvania.

According to news reports, police believe the thieves threw cables over the tower guy wires and yanked it down with a truck. They say that they also found cut bolts and torch marks on nearby grass.

Authorities believe the thieves then cut into smaller pieces in order to get it out of the wooded area, but they can't figure out how they did it without anybody noticing.

The tower hasn't been used for years, but the family who owns it was in talks with a company to use it to bring wireless Internet service to the Windber area. The thieves also got away with a 300 pound transformer full of copper. (Published reports)

**

EMI ENFORCEMENT: TEXAS POLICE RADIO INTERFERES WITH WATER SPRINKLERS

A new emergency radio system serving a couple of Texas towns is causing a rather watery problem for its neighbors. John Williams, VK5BUI, tries to dry it all out.

--

All was going well with the testing of a new police communication system in the Texas cities of Cedar Hill, DeSoto and Duncanville, until it was found to be producing an unwanted side-effect in the city of Plano some 30 miles

away.

The police transmissions have been setting off an expensive network of radio-controlled sprinklers used for parks and road median strips. Worse still, the issue took on a life of its own through radio talk-back programs and other media outlets trying to point blame for the technical hitch.

Then came news that the new emergency system also interfered with radio equipment that monitored the levels of three water towers. Attempts to find a mutually agreed solution appear to have failed so it is off to the Federal Communications Commission for a determination. 'm John, VK5BUI.

--

With matters such as the switchover to digital broadcasting and other important items on its immediate agenda, it will be interesting to see how the FCC the FCC reacts to this wet request. (WIA News)

**

RADIO EDUCATION: LCWO TEACHES MORSE ONB THE WEB

LCWO.net is a new website to learn and practice Morse telegraphy. Called Learn CW Online all you need for using LCWO is a web browser. This gives the user the opportunity to practice CW wherever an internet connection is available. It also lets users retain their personal settings, scores and statistics. Check it out at LCWO.net on the World Wide Web. (WebNews)

**

THE SOCIAL SCENE: PEORIA SUPERFEST TURNS 50

A word of congratulations to the Peoria Superfest which celebrates its 50th year as it holds forth September 20th to the 21st at the Exposition Gardens in Peoria, Illinois. The Peoria Superfest is a combined ARRL sanctioned hamfest, computer show and flea market that began back in 1958. More abut this years 50th anniversary event is on-line at www.peoriasuperfest.com. (WA9VRH)

**

SPECIAL EVENT: COMMEMORATING KATRINA AND RITA

The SouthEast Louisiana Amateur Radio Club will conduct a special event station to commemorate the third anniversaries of Hurricanes Katrina and Rita.. The operation will take place on Saturday , September 13th from 1400 to 2000 UTC with stations on 7.250. and 14.250 Mhz. QSL to Scott Hernandez, K5R 957 Nancy St. Mandeville, Louisiana 70448. (SELARC)

**

SPECIAL EVENTS: POW-MIA RECOGNITION DAY

California's Anaheim Police Amateur Radio Club will operate special event station K6P from September 18th to the 21st. This, in remembrance of POW-MIA Recognition Day

POW and MIA are acronyms for "Prisoner of War" and "Missing in Action" and refer to members of the military who have served the nation and have served our nation. Operation will be on SSB on 40 throuh 15 meters along with PSK-31 and RTTY on their appropriate frequencies.

QSL with a self addressed stamoed envelope to KM6HB: Mark McMullen, P.O.Box 27271, Santa Ana, California, 92799 (Southgate)

EMERGING TECHNOLOGY: WILMINGTON NC GOES ALL DIGITAL TV

Residents of Wilmington, North Carolina became the first in the nation to experience the transition to digital television. This, as the city's full service television stations shut off their analog transmitters and went all digital all the time. Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

--

The change took place at noon, Eastern Standard time on Monday, September the 8th. That's when FCC Chairman Kevin Martin flanked by local broadcasters flipped a symbolic eight-foot high switch during a ceremony in downtown Wilmington as a way to signify the new era of TV was about to begin.

Wilmington broadcasters had volunteered to make the switch to digital operation five months ahead of the February 17th 2009 deadline Congress set for the rest of the nation. This, as a way to test the new ATSC digital system before it goes national. The test is intended to give the FCC as well as broadcasters and consumers in other markets a better idea of how to ensure the 2009 switch to digital goes smoothly.

In general it did go pretty well. FCC officials on scene did say they received several hundred calls from local residents, some of whom were not aware that the switch had taken place even though it had been widely advertised for months. Others were simply having trouble hooking up digital television converters to their analog sets.

FCC staff members planned to remain in the area for several days. This, to help resolve any further problems residents might have with setting up converter boxes and finding the right antennas.

Wilmington, North Carolina is the 135th largest television market in the United States, with about 180,000 television households across five counties. However, only about 7 percent of those households rely on over the air analog broadcasts, compared with a national average of about 13 percent. This made it the ideal test bed for a full scale trial of the new all A-T-S-C all-digital broadcast television system.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM in Reno.
